Notes: Data collection methods for each measure are current as of February 2020. The methods may change as measures undergo specification updates and maintenance.

Measures specified for administrative data collection may use code sets that are not available for state-level reporting, such as LOINC, SNOMED, or CPT-II codes. More information is available in the detailed measure specifications.

^a There was a change to the ICD-10 coding guidelines, effective October 1, 2018, related to the codes for reporting body mass index (BMI). The change allows providers to bill for BMI codes only if the beneficiary has a clinically relevant condition, such as obesity. As a result, beneficiaries without a relevant condition will no longer be captured in the numerator using administrative claims.

^b ECDS data collection method includes data from administrative claims, electronic health records, case management systems, and health information exchanges/clinical registries. More information about ECDS is available at <https://www.ncqa.org/hedis/the-future-of-hedis/hedis-electronic-clinical-data-system-ecds-reporting/>.
