I. INTRODUCTION

The Supplemental Nutrition Assistance Program (SNAP) is the largest domestic food and nutrition assistance program administered by the U.S. Department of Agriculture Food and Nutrition Service (FNS), providing millions of Americans with the means to purchase food for a nutritious diet. During fiscal year (FY) 2012, SNAP served an average of 46.6 million people per month and paid out \$74.6 billion in benefits.

In response to legislative adjustments to program rules and changes in economic and demographic trends, the characteristics of SNAP participants and households and their levels of participation in SNAP change over time. To measure the effect of these changes on SNAP, FNS relies on data from the SNAP Quality Control (SNAP QC) database. This database is an edited version of the raw datafile of monthly case reviews conducted by State SNAP agencies to assess the accuracy of eligibility determinations and benefit calculations for each State's SNAP caseload.¹

This document describes how the raw data are cleaned and edited to create the SNAP QC database. It also describes how the QC Minimodel—one of FNS' SNAP microsimulation models—uses the SNAP QC database to simulate the effect of various reforms to SNAP on current SNAP participants.

In Chapter II, we provide an overview of the SNAP Quality Control System, the resulting raw datafile, and the creation of the SNAP QC database. The overview, written for a nontechnical audience, is designed to give analysts and new users of the data enough general information to analyze and interpret the results of SNAP QC data tabulations and QC Minimodel policy change simulations.

¹ In this report, we refer to the original datafile as the raw datafile and the edited version as the SNAP QC database.

In Chapter III, we detail the SNAP QC database file development process. We describe the programs used to transform the raw data into the SNAP QC database, the algorithms used to edit the data for consistency, and the development of the sampling weights for the file.

In Chapter IV, we provide a technical description of the procedures used to transform data elements from the SNAP QC database into the data elements required as inputs to the QC Minimodel and document the QC-specific portions of the QC Minimodel.²

Chapter V contains the codebook for the FY 2012 SNAP QC database and also explains how to use it. For each variable in the database, the codebook lists the variable name, whether it originates from the raw datafile or is constructed, and a description, including all valid values of the variable.

Appendix A provides an assessment of the quality of selected variables in the FY 2012 SNAP QC database. Users should read this appendix before using the SNAP QC database as it recommends against the use of some variables and calls for the use of others with caution because of apparent miscoding, high prevalence of missing or unknown values, or small sample sizes. Appendix B describes automated edits to the raw data. Appendix C provides information on new and changed variables on the FY 2012 SNAP QC database. Appendix D shows the derivation of monthly sampling weights used in the SNAP QC file. Appendix E lists the State and region identification codes used in the file, and Appendix F contains the parameter values used to determine SNAP eligibility in FY 2012, including gross and net income screens, deductions, and maximum benefit amounts. Appendix G presents the Quality Control Review Schedule—the coding form on which the raw data are originally recorded by the State QC System reviewers.

² Documentation of the generic portions of the QC Minimodel can be found in the *2012 Baseline of the 2009 MATH SIPP+ Microsimulation Model: Programmer's Guide, Technical Description, and Codebook* (Schechter and Smith, 2012).

Key Changes to the FY 2012 SNAP QC Database

The contents of the FY 2012 SNAP QC database are very similar to the contents of the FY 2011 SNAP QC database, with a few minor changes. First, three constructed variables were added: DISI, NONCIT_HEAD, and COMPOSITION. Second, the variables FSNDISCA and NDISCAi now use the variable DISI to determine disability status. These new variables are fully described in the codebook section of this documentation.

In addition, the definitions of overissuances and underissuances in the Status of Case Error Findings (STATUS) variable changed. While in prior years QC reviewers were instructed to code as overissuances (STATUS = 2) or underissuances (STATUS = 3) only errors of \$26 or more, QC reviewers are now instructed to code errors of any size as an overissuance or underissuance. Similarly, QC reviewers are now instructed to record all benefit amount errors (AMTERR) rather than only errors greater than \$25.

See Appendix C for more details about these changes.

This page has been left blank for double-sided copying.

II. OVERVIEW OF THE SNAP QC DATABASE

The SNAP QC database is an edited version of the raw datafile generated by SNAP's Quality Control System. The SNAP QC database contains detailed demographic, economic, and SNAP eligibility information for a nationally representative sample of approximately 50,000 SNAP units.³ The data, which are produced annually, are well suited for tabulating characteristics of SNAP units and simulating the impact on current SNAP units of various reforms to SNAP. Accordingly, the SNAP QC database is the source for FNS' annual report entitled *Characteristics of Supplemental Nutrition Assistance Program Households* and FNS' QC Minimodel, a microsimulation model that estimates the effect of proposed changes to SNAP on current participants. In this chapter, we provide an overview of the raw datafile and the processing and edits that convert the datafile to the SNAP QC database.

A. The Quality Control System

The raw datafile is generated from the monthly reviews of SNAP cases conducted by State SNAP agencies as part of the Quality Control System. Quality Control (QC) reviews are an audit through which States are held accountable for the accuracy of SNAP certification. The primary objective of the QC review is to assess the accuracy of eligibility determinations and benefit calculations. A QC review determines (1) if participating units are actually eligible for participation and are receiving the correct benefit amount or (2) if unit participation was correctly denied or terminated.

The Quality Control System is based on a national sample of participating units (active cases) and a somewhat smaller national sample of denials and terminations (negative cases). The national

³ In this technical documentation, "SNAP unit" or simply "unit" refers to individuals who together are certified for and receive SNAP benefits. A household may contain multiple SNAP units and/or individuals who do not receive SNAP benefits. However, each record in the QC data contains data on only one SNAP unit per household.

sample of participating units is drawn by month and by the 50 States, the District of Columbia, Guam, and the Virgin Islands.

State quality control reviewers review data in the active case file. They gather financial and demographic information from the sampled unit's case file, visit the household to re-interview the participants, and then determine whether the SNAP unit received the correct SNAP benefit amount. The review information is entered on a data coding form (either manually or electronically), sent to FNS' national computer center, and entered into the raw datafile. FNS regional offices conduct a federal re-review of a subsample of each original State sample. Federal re-review data are also sent to the national computer center for entry into the raw datafile and for use in conjunction with the State review data to calculate the official payment error rate for each State. States can be sanctioned or rewarded on the basis of their official payment error rates.

Most of the data on the raw datafile are the financial and demographic information collected during the review. The authorized benefit amount and eligibility status determined by the caseworker are also on the file, along with the error amount and eligibility status determined by the reviewer. The reviewer-determined entries are defined as follows:

- If the SNAP unit was eligible and the authorized benefit amount equaled the issued benefit, then the error amount is 0 and the case finding is "amount correct".
- If the SNAP unit was eligible and the authorized benefit amount varied from the issued benefit, then the difference between the two amounts is recorded as the error amount and the case finding is either "overissuance" or "underissuance." Error amounts of \$50 or less are not included in the calculation of State error rates.
- If the reviewer determines that the SNAP unit was ineligible, then the issued benefit amount is recorded as the error amount and the case finding is "ineligible."

State quality control reviewers also review data in the negative case file to decide whether proper procedures were used to deny or terminate a case. The negative case file is not used in the QC Minimodel or included in the QC database.

B. The Raw Datafile

While most participating SNAP units are subject to sampling in the active case file, certain types of units that are not appropriate for review are excluded. Specifically, the active case universe excludes cases:

- That were dropped as a result of oversampling
- That were listed in error as active cases, including, but not limited to:
 - Negative cases appearing in the active sample
 - Households that did not participate in SNAP for the sample month, including suspended cases and those who were eligible for zero benefits before any recoupments were made
 - Households receiving restored benefits who were not otherwise participating
 - Households receiving retroactive benefits for the sample month
- That are receiving benefits for a disaster authorized by FNS
- That are pending a hearing for an adverse action
- That are under investigation for SNAP fraud (including those with pending fraud hearings)
- Where all members have died or moved outside the State
- Where no member could be interviewed because:
 - They had been hospitalized, incarcerated, or placed in a mental institution and were expected to remain there for 95 days after the end of the sample month
 - They could not be located

The sampling unit within the active universe is the SNAP unit as defined in an FNS-approved State manual.

State sampling plans must conform to accepted principles of probability sampling. A State may use either a simple random sampling plan or a more complex sampling design that best meets its needs. FNS must approve sampling designs other than simple random sampling.

The standard minimum annual State sample sizes range from 300 to 2,400 reviews depending primarily on the size of the monthly participating caseload. States must use the following guidelines when determining their standard annual QC sample sizes:

- If the average monthly caseload is under 10,000, the standard minimum sample size is 300 cases per year.
- If the average monthly caseload is 60,000 or over, the standard minimum sample size is 2,400 cases per year.
- If the average monthly caseload is between 10,000 and 60,000, the standard minimum sample size is derived by the following formula:

$$\text{Standard minimum} = 300 + 0.042 (N - 10,000),$$

where N is the average monthly caseload

A State may choose an optional minimum sample size if it agrees not to dispute later payment error rate findings and the associated sanctions on the basis of the precision of the estimates.

Optional minimum sample sizes are determined as follows:

- If the average monthly caseload is under 12,942, the optional minimum sample size is 300.
- If the average monthly caseload is 60,000 or over, the optional minimum sample size is 1,020.
- If the average monthly caseload is between 12,942 and 60,000, the optional minimum sample size is derived by the following formula:

$$\text{Optional minimum} = 300 + 0.0153 (N - 12,941),$$

where N is the average monthly caseload

C. Creation of the SNAP QC Database

We create the SNAP QC database from the raw datafile by following four steps: (1) preliminary processing, (2) data editing, (3) variable construction, and (4) weighting.

1. Preliminary Processing

After first converting the raw datafile into a SAS file, we generate and inspect a series of quality assurance counts and frequency distributions for the values of each variable on the file. We assign missing value codes to data that are out of range, missing from the file, or coded as unknown on the source file. We remove from the file the following records because they have too little recorded information available for processing:

- Those coded as not subject to review (REVDISP = 2), incomplete (REVDISP = 3), or deselected due to oversampling (REVDISP = 4)

- Those coded with review findings of ineligible (STATUS = 4)
- Those missing all data except error and status information, identified as those coded with 0 case members (CERTHHSZ = 0)

In addition, we remove eligible units that the reviewer found did not qualify for a positive benefit because the unit had a benefit overissuance equal to or exceeding the recorded benefit (those with STATUS = 2 and RAWBEN <= AMTERR). In Table II.1, we show the number of sample units dropped from the FY 2012 edited file.

Table II.1. Number of Cases Sampled, Dropped from the Edited File, and Included on the Edited File, Fiscal Year 2012

| | Fiscal Year 2012 SNAP QC Sample |
|--|------------------------------------|
| Number of Cases Sampled | 56,746 |
| Cases not subject to review | 2,513 |
| Cases deselected to correct for oversampling | 0 |
| Cases subject to review | 54,233 |
| Incomplete cases | 3,366 |
| Cases completed | 50,867 |
| SNAP units not eligible for a positive benefit | 85 |
| SNAP units not eligible for SNAP | 662 |
| SNAP units eligible for a positive benefit | 50,120 |
| SNAP units dropped due to inconsistencies | 93 |
| SNAP units on the final file | 50,027 |

Source: Fiscal Year 2012 Supplemental Nutrition Assistance Program Quality Control sample.

2. Data Editing

Consistent measures of SNAP unit size, income, and benefit level are critical to any analysis of SNAP units. However, data for these measures are not always consistent in the raw datafile. For instance, the sum of the income of each person in the unit may not equal reported unit-level gross income. Such inconsistencies may be rooted in the initial case record information or the transcription and data entry process. In the data-editing step, we look for the inconsistencies described below and correct them. We drop the small number of SNAP units with irresolvable inconsistencies from the edited file.

The overall strategy of the editing process is to ensure that certain basic relationships hold for all cases. The two most basic relationships that should hold for the reported program variables follow:⁴

- Net income must equal gross income minus the total deductions for which the unit is eligible and not be negative.
- The SNAP benefit level must equal the maximum benefit for that unit size minus 30 percent of net income and not be negative (or be set to the minimum benefit if appropriate).

In addition, several important relationships must hold for some final and intermediate variables. For example:

- Gross unit income must equal the sum of all countable person-level income amounts.
- The earned income deduction must equal the specified percentage (rounded down) of countable earned income.
- The excess shelter deduction must equal shelter costs above 50 percent of gross income minus all other deductions up to a cap. Units with elderly or disabled members are not subject to the cap. Units with a homeless deduction will not have an excess shelter deduction.
- Total deductions must equal the sum of the standard deduction, any earned income deduction, medical deduction, excess shelter deduction or homeless deduction, dependent care deduction, and child support expenditure.⁵

In Chapter III, we describe the complex process by which the editing program determines whether a case is internally consistent and, if not, performs needed edits.

3. Variable Construction

We construct several variables from the reported data once the file is edited. The major classes of constructed variables are unit-level countable income variables, SNAP eligibility and benefit determination variables, and characteristics flags.

⁴ Households participating in the Minnesota Family Investment Program (MFIP) or an SSI Combined Application Project (SSI-CAP) are subject to different eligibility and benefit determination rules and have been edited accordingly.

⁵ In some cases, child support payments are excluded from gross income and not taken as a deduction.

- **Unit-level countable income variables.** The total SNAP unit income variable for each type of income (e.g., Temporary Assistance for Needy Families (TANF), Social Security) is constructed by summing the person-level income of that type over all individuals in the SNAP unit. The total SNAP unit gross income, earned income, and unearned income variables are constructed by summing all the appropriate unit income variables.
- **SNAP eligibility and benefit determination variables.** Variables used to determine eligibility and benefits—such as SNAP unit deductions, SNAP unit net countable income, and SNAP unit benefits—are constructed on the basis of SNAP unit countable income and unit demographic characteristics.
- **Characteristics flags.** Characteristics flags identify SNAP units with certain features, such as the presence of an elderly or disabled person. In addition, data from Census files are merged to identify whether a SNAP unit resides in a metropolitan, micropolitan, or rural area.⁶

4. Weighting

We weight the observations on the 2012 QC raw file to ensure that the weighted totals match three adjusted SNAP Program Operations totals: the monthly number of SNAP units by State and stratum, the monthly number of SNAP participants by State, and the monthly total benefits issued by State. We adjust these totals by removing benefits issued in error and benefits issued through the SNAP disaster assistance program because neither of these groups is included in the SNAP QC data.⁷ In Section III.C, we describe the derivation of the FY 2012 sampling weights in detail.

SNAP Program Operations totals are generated from FNS' National Data Bank and reflect actual levels of participation and benefit issuance. Information about the number of SNAP units receiving a disaster assistance benefit comes from FNS. The rates of SNAP units receiving benefits in error are estimated from the raw QC datafile. In Table II.2, we compare the QC System sample-based estimates to aggregate program participation data for FY 2012.

⁶ A Micropolitan Statistical Area has at least one urban cluster of at least 10,000 but less than 50,000 people and includes adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties.

⁷ The adjusted total number of SNAP units and benefits is lower than Program Operations Data figures by about 1 and 3 percent, respectively. In FY 2012, about 812 thousand people affected by tornados, hurricanes and tropical storms, floods, and wildfires received disaster assistance.

Table II.2. Comparison of Program Data to Edited SNAP QC Datafile, Fiscal Year 2012

| Average Monthly Value | Fiscal Year 2012 | | | |
|----------------------------|------------------|-------------------------------------|---------------------------------------|-------------------------|
| | Program Data | Adjustments for Disaster Assistance | Adjustments for Ineligible SNAP Units | Edited SNAP QC Datafile |
| Number of SNAP Units | 22,329,713 | 28,397 | 254,997 | 22,046,320 |
| Number of Participants | 46,609,072 | 67,661 | 519,900 | 46,021,511 |
| Value of Benefits | \$6,218,288,393 | \$18,551,386 | \$153,545,924 | \$6,046,191,083 |
| Average SNAP Unit Size | 2.09 | 2.38 | 2.04 | 2.09 |
| Average Benefit per Person | \$133.41 | - ^a | \$295.34 | \$131.38 |

Sources: Fiscal Year 2012 Program Data and SNAP QC datafile.

^a We adjust units and participants for new disaster SNAP units only; benefits for disaster SNAP benefits issued to new units; and supplemental benefits issued to qualifying on-going SNAP units. As a result, the average disaster SNAP benefit per person cannot be calculated from the information in this table.

D. Final SNAP QC Database

After we develop the SNAP QC database, we create a SAS version that can be used to tabulate characteristics of SNAP units and a binary file that serves as the underlying database for FNS' QC Minimodel.

III. FISCAL YEAR 2012 SNAP QC FILE DEVELOPMENT PROCESS

A. Developing the SNAP QC File

In this chapter and in Figure III.1, we describe the programs and data used in the development of the FY 2012 SNAP QC file.⁸

Step 1.

We received the 2012 data from FNS on a CD in an ASCII (or text) format.

| | | |
|----------|---------------------|--------------|
| INPUT CD | File: FY2012 | (ASCII file) |
| | Record length 2,250 | |
| | 56,746 records | |

Step 2.

We converted to SAS format the specified fields from the raw FNS file, created the unique record identifier (HHLDNA), and corrected stratum codes to reflect FNS' updated specifications.

| | | |
|--------------|---------------------|---------------------------------|
| PROGRAM NAME | SASIFY12.SAS | |
| INPUT FILE | FY2012 | (ASCII; 56,746 records) |
| OUTPUT FILE | QCFY2012_1.SAS7BDAT | (56,746 records; 721 variables) |

Step 3.

We ran preliminary frequencies on the SAS file and checked the frequencies for evidence of data corruption, consistency across areas and months, and the extent of missing and out-of-range data. In addition, we calculated means and compared them to those for the previous year.

| | | |
|---------------|---------------------|---------------------------------|
| PROGRAM NAMES | FREQS12.SAS | |
| | FREQS12A.SAS | |
| | FREQS12A_ELG.SAS | |
| | CMP1112A.SAS | |
| INPUT FILE | QCFY2012_1.SAS7BDAT | (56,746 records; 721 variables) |

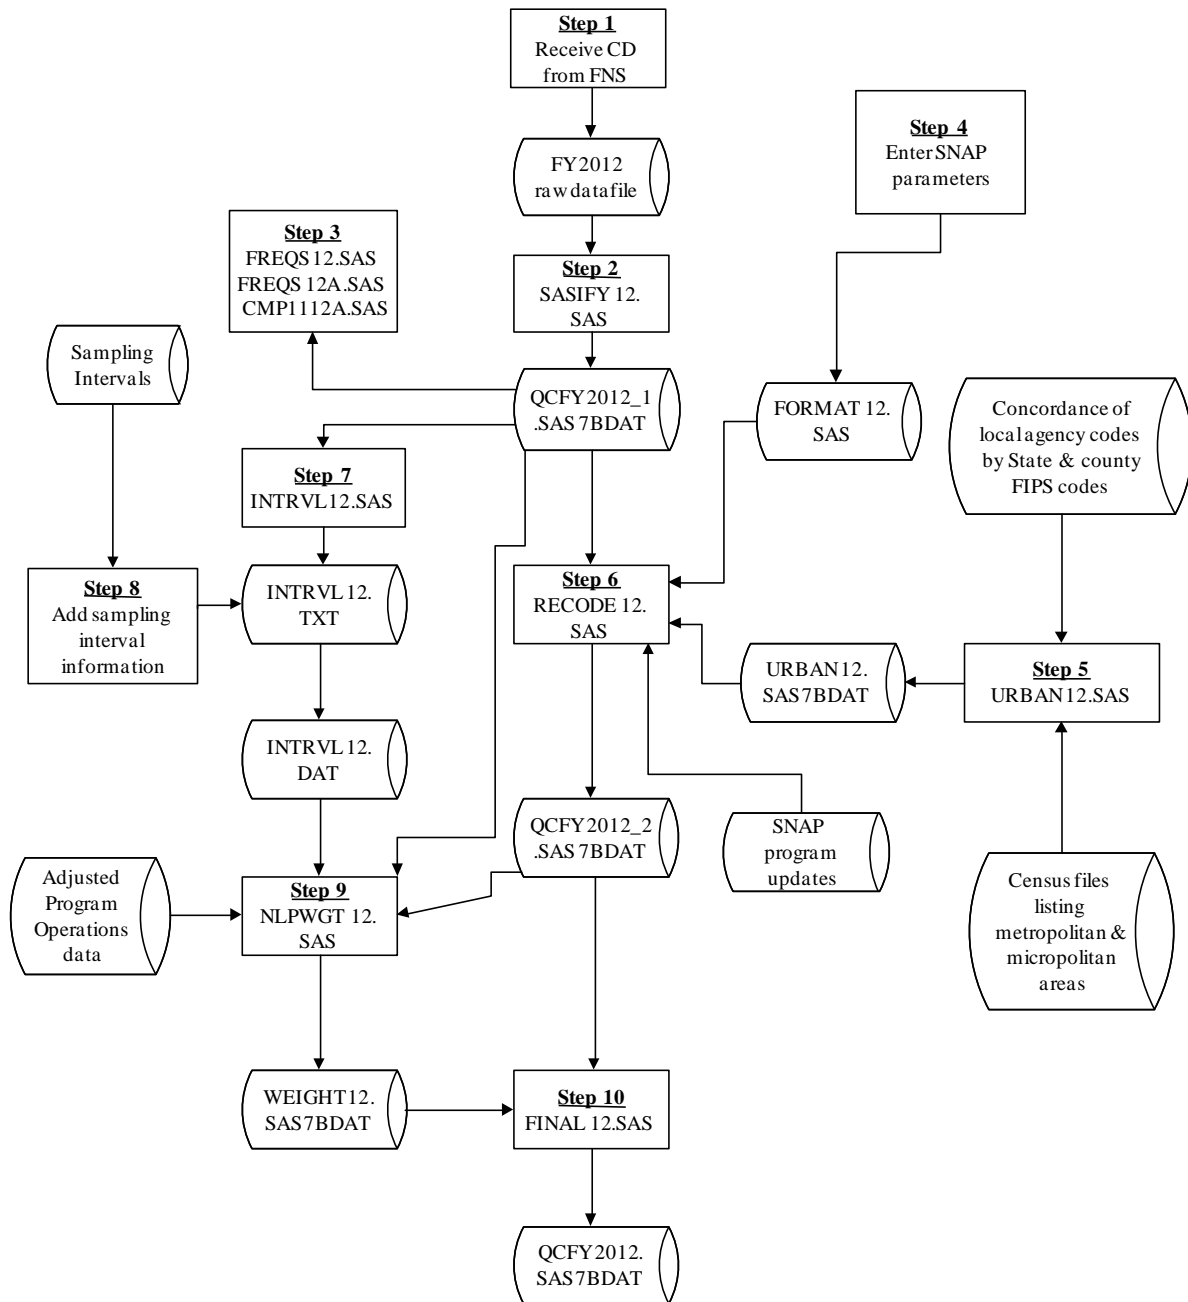

Step 4.

We obtained relevant SNAP values (parameters), including those for maximum and minimum benefit amounts, income screens, Minnesota Family Investment Program (MFIP), SSI Combined Application Project (SSI-CAP), and standard utility allowance (SUA) amounts by State. We entered them into a SAS format library, and used the formats for our program in Step 6.

| | |
|-----------------|--------------|
| OUTPUT PROGRAM: | FORMAT12.SAS |
|-----------------|--------------|

⁸ Copies of the computer programs are available from FNS upon request.

Figure III.1. Fiscal Year 2012 SNAP QC File Development Process

Step 5.

We added geographic-level information to the file. Using the local agency code on the raw datafile, we assigned a county FIPS code to each unit. We flagged any unknown local agency codes for correction or addition to the concordance of local agency codes by county and State. We then merged each unit to the 2008 Census Bureau files of metropolitan and micropolitan areas by using State and county codes. We flagged units as metropolitan or micropolitan depending on their match to one of the Census files; those not found in either file were flagged as rural, except for those with local codes that were State-wide, which we flagged as missing. We removed cases not subject to review and incomplete cases in the output files.

| | | |
|--------------|---------------------|---|
| PROGRAM NAME | URBAN12.SAS | |
| INPUT FILES | QCFY2012_1.SAS7BDAT | (56,746 records; 721 variables) |
| | METRO2_08.TXT | (ASCII; 1,159 records; 3 variables) (Census 2008 Metropolitan File) |
| | MICRO2_08.TXT | (ASCII; 701 records; 3 variables) (Census 2008 Micropolitan File) |
| | FIPS_LAC.TXT | (ASCII; 5,046 records; 6 variables) (concordance of local area codes, updated in 2012.) |
| OUTPUT FILE | URBAN12.SAS7BDAT | (50,867 records; 5 variables) |

Step 6.

We edited the file to resolve inconsistencies between variables within a unit and created several unit-level variables pertaining to SNAP affiliation, income deductions, shelter limit, benefit amount, assets, poverty status, and specific types of income. Unknown values (9-filled or 0 where a value should have been entered) were set to missing. The program detected inconsistencies between person-level income totals and reported totals and resolved them by using a procedure described in detail below (see Obtaining File Consistency). Units meeting all the following conditions were written to the output file: (1) had a completed review; (2) found eligible by the QC reviewer; (3) contained at least one SNAP participant under review; (4) received a benefit amount of at least \$1; and (5) passed the eligibility tests, flagged as categorically eligible, or identified as participating in MFIP or an SSI-CAP. Meeting these conditions together with the sample reductions in Step 5 completed the sample selection for the final datafile (50,027 records).

| | | |
|--------------|----------------------|-----------------------------------|
| PROGRAM NAME | RECODE12.SAS | |
| INPUT FILES | QCFY2012_1.SAS7BDAT | (56,746 records; 721 variables) |
| | FORMAT12.SAS | (Format library) |
| | URBAN12.SAS7BDAT | (50,867 records; 5 variables) |
| OUTPUT FILES | QCFY2012_2.SAS7BDAT | (50,027 records; 1,196 variables) |
| | COMPLETES12.SAS7BDAT | (50,867 records; 1,198 variables) |
| | DROP12.SAS7BDAT | (93 records; 1,197 variables) |

Step 7.

We created a file containing State name, FIPS code, and stratum, with one record per State/stratum combination.

| | | |
|--------------|---------------------|----------------------------------|
| PROGRAM NAME | INTRVL12.SAS | |
| INPUT FILES | QCFY2012_1.SAS7BDAT | (56,746 records; 721 variables) |
| OUTPUT FILE | INTRVL12.TXT | (ASCII; 56 records, 4 variables) |

Step 8.

We edited the INTRVL12.TXT file by hand to add sampling interval information (obtained from FNS) for each State/stratum combination and saved the edited file as INTRVL12.DAT.

| | | |
|-------------|--------------|----------------------------------|
| INPUT FILE | INTRVL12.TXT | (ASCII; 56 records, 4 variables) |
| OUTPUT FILE | INTRVL12.DAT | (ASCII; 56 records, 4 variables) |

Step 9.

As described in Section III.C, we calculated a weight for each SNAP unit that had a complete review, excepting those units that were dropped from the edited file because of unresolved inconsistencies.

| | | |
|--------------|----------------------|---|
| PROGRAM NAME | NLPWGT12.SAS | |
| INPUT FILES | QCFY2012_1.SAS7BDAT | (56,746 records; 721 variables) |
| | QCFY2012_2.SAS7BDAT | (50,027 records; 1,196 variables) |
| | INTRVL12.DAT | (ASCII; 56 records, 4 variables) |
| | FY12_ADJUSTED.XLSX | (FNS Excel spreadsheet containing participation numbers adjusted for disasters) |
| | COMPLETES12.SAS7BDAT | (50,867 records; 1,198 variables) |
| | DROP12.SAS7BDAT | (93 records; 1,197 variables) |
| OUTPUT FILE | WEIGHT12.SAS7BDAT | (50,774 records; 27 variables) |

Step 10.

We merged the file containing weights with the edited SNAP QC file to produce the final FY 2012 SNAP QC file.

| | | |
|--------------|---------------------|-----------------------------------|
| PROGRAM NAME | FINAL12.SAS | |
| INPUT FILES | QCFY2012_2.SAS7BDAT | (50,027 records; 1,196 variables) |
| | WEIGHT12.SAS7BDAT | (50,774 records; 27 variables) |
| OUTPUT FILE | QCFY2012.SAS7BDAT | (50,027 records; 781 variables) |

Step 11.

Using the final SNAP QC SAS file, we created a hierarchical binary file for the QC Minimodel with SAS missing values coded to negative values.

| | | |
|--------------|-------------------|---|
| PROGRAM NAME | MINIQC12.SAS | |
| INPUT FILES | QCFY2012.SAS7BDAT | (50,027 records; 781 variables) |
| OUTPUT FILE | MATHPC.BIN | (50,027 unit records; 110,844 person records) |

Step 12.

Using the final SNAP QC SAS file, we created a hierarchical binary file for use in producing tables with Table Producing Language (TPL) software. The program also created a codebook for the TPL software. SAS missing values were coded to negative values. Additional unit-level recodes were created for use in table generation.

B. Obtaining File Consistency

As mentioned under Step 6 above, we performed selected editing of the reported data. We followed the procedures below to obtain the highest possible degree of consistency between related variables in the data while maintaining the database's integrity. Some of the procedures do not apply to SNAP units in MFIP—Minnesota's TANF program—and demonstration units participating in an SSI-CAP in 18 States. We present the editing procedures for MFIP and SSI-CAP units after outlining the general procedure. For detail on specific data-cleaning issues, please refer to Appendix B.

1. Standard Editing Procedures

- 1. Eliminate case records that are incomplete or are for SNAP units that do not qualify for a benefit.**
 - Those with incomplete reviews (REVDISP not equal to 1)
 - Those with no case members (CERTHHSZ = 0)
 - Those found ineligible by the QC reviewer (STATUS = 4)

- Those with an overissuance that is equal to or greater than the reported benefit (STATUS = 2 and RAWBEN <= AMTERR)
 - Those with unknown eligibility (STATUS is missing)
2. **Get a preliminary count of the number of people in the SNAP unit.**
 3. **Recode missing information to SAS missing values.**
 - Any field coded with an out-of-range value is set to missing value of .A (e.g., a 0 in the SNAP case affiliation code).
 - Any field coded as unknown (filled with 9's) is set to missing value of .B. The one exception is the SNAP case affiliation code (FSAFIL_i) where the 9's remain to signify a valid person.
 - Any constructed field that cannot be determined because of missing values is set to missing value of .C (e.g., total assets).
 - For units participating in months for which they are not certified, CERTMTH is set to missing value of .D.
 - For MFIP and SSI-CAP units, variables not relevant in the benefit determination are set to missing value of .E.
 4. **Finalize the unit size.** We use the SNAP case affiliation flags for each person in the unit to construct a measure of the number of members in the SNAP unit under review. A person is considered a member of the SNAP unit if his or her affiliation code (FSAFIL_i) is equal to 1.
 5. **Determine unit totals and flags for elderly individuals, SNAP units with disabled nonelderly individuals, number of children, and so forth.**
 6. **Initialize FY 2012 values (e.g., standard deduction, shelter cap, maximum benefit).**
 7. **Calculate earned and unearned incomes for those inside the unit and others in the household by adding up person-level income amounts.**
 - Earned income variables are wages (WAGES_i), self-employment income (SLFEMP_i), and other earned income (OTHERN_i).
 - Unearned income variables are contributions (CONT_i), court-ordered child support payments (CSUPRT_i), deemed income (DEEM_i), State diversion payments (DIVER_i), educational grants/scholarships/loans (EDLOAN_i), earned income tax credit income (EITC_i), energy assistance income (ENERGY_i), State general assistance (GA_i), other government benefits (OTHGOV_i), other unearned income (OTHUN_i), Social Security income (SOCSEC_i), Supplemental Security Income (SSI_i), Temporary Assistance to Needy Families (TANF_i), unemployment compensation (UNEMP_i), veterans' benefits (VET_i), workers' compensation (WCOMP_i), and subsidized earned income (WGESUP_i).
 8. **Reconcile reported person-level income amounts with reported unit-level income and deduction variables.** All household members reported on the file (not just unit members) are initially considered in the process of reconciling person and unit-level income. Any person-level income amount that is found to not count toward the benefit

calculation is set to 0. To reconcile any differences between the person and unit-level income amounts, we perform the following steps sequentially, and stop when inconsistencies are resolved:

- 8a. **Does the child support income match the child support deduction?** For units where child support income and child support expenses are the same, we determine if the exclusion of either will allow us to replicate the reported unit-level gross income or net income. We set to 0 any child support income or deductions that are not used.⁹
- 8b. **Does the sum of person-level income match the unit-level gross income?** We compare earned and unearned income for the unit and the household to see if any combination is equal to the reported unit-level gross income. We check in the following order: (1) all unit income; (2) all unit income plus unearned income from outside the unit; (3) all unit income plus earned income from outside the unit; and (4) all household income.¹⁰ At each stage, we check to see if child support expenses have been excluded from the unit-level gross income. If person-level sums and the unit-level gross income are equal at any stage, we set any income not used to 0.
- 8c. **Does the sum of person-level unearned income and earnings implied by the earnings deduction match the unit-level gross income?** We compare unearned income for the unit and the household plus the amount of earnings implied by the reported earnings deduction with the reported unit-level gross income to see if any combination is equal. We check in the following order: (1) unit unearned income; and (2) household unearned income. At each stage, we check to see if child support expenses have been excluded from the unit-level gross income. If reconciliation is made, we adjust earnings to satisfy the earnings deduction (adjusting existing earnings proportionately or, in the event of no person-level earnings, adding to the householder's other earned income). We set all other income to 0.
- 8d. **Is gross income not recorded?** If the reported unit-level gross income is 0 and the benefit is less than the maximum benefit for a unit of this size, we set the unit-level gross income to the sum of the person-level income values for the household.
- 8e. **Is the benefit consistent with having no income?** If the reported unit-level gross income is 0 and the benefit is equal to the maximum benefit for a unit of this size, we set the person-level income values for the household to 0.
- 8f. **Is gross income unreasonably high?** If the reported unit-level gross income is out of range (i.e., greater than three times the net income screen for a unit of this size) and no person-level income value is out of range, we set the unit-level gross income to the sum of the person-level income values for the household.
- 8g. **Is person-level income consistent with deductions and unit-level net income?** We compare combinations of earned and unearned income for the unit and the

⁹ The Farm Security and Rural Investment Act of 2002 allows child support expenses to be excluded from gross income rather than counted as a deduction.

¹⁰ "Unit" income is income associated with participating household members. We allow a \$5 difference to account for potential rounding differences.

household less calculated total deductions to the reported unit-level net income. The calculated total deductions vary for each combination because the shelter deduction depends on household income while the earnings deduction depends on total earnings. We check in the following order: (1) all unit income less total deductions; (2) all unit income plus unearned income from outside the unit less total deductions; (3) all unit income plus earned income from outside the unit less total deductions; and (4) all household income less total deductions. If reconciliation is made, we set any income types not used to 0 and recalculate unit-level gross income.

- 8h. **Are person-level unearned income and earnings implied by the earnings deduction consistent with deductions and unit-level net income?** We check unearned income for the unit and the household plus the amount of earnings implied by the reported earnings deduction to see if any combination equals the reported unit-level net income plus calculated total deductions. We check in the following order: (1) unit unearned income; and (2) household unearned income. If reconciliation is made, we adjust earnings to satisfy the earnings deduction (adjusting existing earnings proportionately or, in the event of no person-level earnings, adding to the householder's other earned income); we set any income types not used to 0.
- 8i. **Do unit-level income values agree with no errors reported?** If no errors are reported (AMTERR = 0) and the unit-level income values agree (gross = net + total deductions), we adjust the person-level income to agree with the unit-level values. We first adjust person-level earnings proportionately to agree with the earnings deductions; if any further adjustments are needed, we adjust person-level unearned income values proportionately.
- 8j. **Do earnings agree with the reported earned income deduction, but exceed the reported unit-level gross income?** If earnings agree with the reported earned income deduction but exceed the unit-level reported gross income, we recalculate the gross income, setting to 0 any person-level income not used. (1) If unit earnings agree, we set all income outside the unit to 0. (2) If household earnings agree, we set any unearned income outside the unit to 0.
- 8k. **Are person and unit-level incomes still inconsistent?** If we still have not resolved incomes, we make the person-level incomes equal the reported unit-level gross income. If the reported earned income deduction indicates 0 earnings, we set to 0 any person-level earnings; if the reported earned income deduction indicates earnings no greater than the reported gross income, we adjust person-level earnings proportionately to satisfy the earned income deduction; otherwise, we adjust all person-level earnings proportionately. If additional adjustments are needed, we adjust all person-level unearned income values proportionately.
9. **Calculate final SNAP unit income totals (gross, net, TANF, SSI, and so forth).**
10. **Create remaining flags and variables.**
11. **Calculate the benefit.**
12. **If the calculated benefit does not match the raw benefit, adjust the dependent care deduction, excess shelter deduction, or medical expense deduction if doing so results in a matching benefit.** In some SNAP units, we are able to reconcile initial

differences between the calculated benefit and the raw benefit by performing the following steps sequentially and stopping when inconsistencies are resolved:

12a. **Does the calculated benefit match the raw benefit?** We define a SNAP unit as having a matching benefit if it meets one of the following conditions:

1. QC reviewers recorded a payment error and (1) the calculated benefit is within \$5 of the raw benefit adjusted for the error amount, or (2) the calculated benefit is within \$5 of the unadjusted raw benefit, and the error element is not indicated to be the dependent care deduction, the shelter deduction, or the standard utility allowance.
2. QC reviewers recorded no payment errors and the calculated benefit is within \$5 of the raw benefit.

12b. **Does adjusting the dependent care deduction result in a matching benefit?** If a unit has a dependent care deduction that is not consistent with dependent care costs, we make the deduction match the expenses if, as a result of doing so, one of the following conditions is met:

1. QC reviewers recorded a payment error and the calculated benefit is within \$5 of the raw benefit adjusted for the error amount.
2. QC reviewers recorded no payment errors and the calculated benefit is within \$5 of the raw benefit.

For each condition, we check with and without allotment adjustments.

12c. **Does adjusting the shelter deduction result in a matching benefit?** We try setting the amount of utility expenses equal to an SUA amount or to 0.¹¹ We try different SUA amounts in the following order: (1) HCSUA, (2) LUA, (3) utilities equal 0, (4) telephone allowance, and (5) a single-element SUA. We set the amount of utility expenses equal to an SUA amount or to 0 if, as a result, one of the following conditions is met:

1. QC reviewers recorded a payment error and the calculated benefit is within \$5 of the raw benefit adjusted for the error amount.
2. QC reviewers recorded no payment errors and the calculated benefit is within \$5 of the raw benefit.
3. QC reviewers recorded no payment errors and the calculated shelter deduction is within \$5 of the raw shelter deduction.

¹¹ SUAs are standard utility allowances that States may use in place of actual utility costs to calculate a household's total shelter expenses. (SUAs are mandatory in some States and optional in others.) Many States employ more than one SUA to accommodate units with different types of utility expenses. An HCSUA (heating and cooling SUA) generally includes all utilities, including telephone. An LUA (lower SUA) is used for units that do not have heating and cooling expenses separate from rent but have at least two other utility expenses. The LUA generally includes all other utilities, including telephones. A telephone allowance is used for units with telephone expenses but without any other utility expenses. Some States also use a one-utility standard, for units with a single utility expense such as electricity. In addition, a few States use combinations of individual standards for different utility expenses. Hawaii, for example, employs individual utility standards for electricity, telephones, sewage, trash and water.

4. For SNAP units in New York, QC reviewers recorded no payment errors, utilities equal the HCSUA, and the unit is coded as using an HCSUA.¹²

For each condition, we check with and without allotment adjustments. Appendix F, Table F.7 provides FY 2012 SUA values by State.

- 12d. **Does setting the medical deduction to 0 for a medical deduction demonstration participant result in a matching benefit?** For participants in medical deduction demonstration states,¹³ we set the medical deduction, medical expenses, and the medical deduction demonstration flag to 0 if, as a result, one of the following conditions is met:

1. QC reviewers recorded a payment error and the calculated benefit is within \$5 of the raw benefit adjusted for the error amount.
2. QC reviewers recorded no payment errors and the calculated benefit is within \$5 of the raw benefit.

- 12e. **Redo the income reconciliation, if necessary.** If we modified a deduction to match the computed benefit (Steps 12b, 12c, or 12d) and used deductions in the income reconciliation (Step 8), then we redo the income reconciliation with new deduction values, repeating all steps beginning with Step 8.

13. **Drop units whose calculated benefit is less than \$1.**

14. **Perform automated edits to reconcile remaining inconsistencies.** Appendix B provides details.

15. **Update categorical eligibility.** A unit is categorically eligible for SNAP if any of the following is true:

- The QC reviewer labels the unit as categorically eligible.
- The unit meets the standards for expanded categorical eligibility in specified States (see Appendix B for information on expanded categorical eligibility).
- The unit is pure cash public assistance (PA); that is, everyone in the unit receives TANF, GA, or SSI, or the unit has TANF income and every adult receives TANF, GA, or SSI. Since TANF income is not reported on the file for the vast majority of MFIP units, we code all MFIP units as pure PA.

16. **Determine eligibility.** We perform the asset and income tests on every unit that is not categorically eligible and retain only eligible units.

¹² New York's computer system automatically generates an SUA for certain units. Consequently, we do not require a matching net income or a matching shelter deduction for New York SNAP units, as long as the unit is coded as using an HCSUA.

¹³ By the end of FY 2012, medical deduction demonstrations were operating in Arkansas, Illinois, Iowa, Kansas, Massachusetts, Missouri, New Hampshire, South Dakota, Texas, Virginia, Vermont, and Wyoming.

- Units without an elderly or disabled member must have a monthly gross income at or below 130 percent of the poverty guideline (Appendix F).¹⁴
- Units must have a net monthly income at or below 100 percent of the poverty guideline (Appendix F).¹⁵
- Units without an elderly or disabled member must have total assets of \$2,000 or less. Units with an elderly or disabled member are allowed up to \$3,250 in assets. (See next section for exceptions.)

2. State Variations to Editing Procedures

Below, we detail the State-specific editing procedures that we use to model State SNAP rules. These rules include higher asset limits (Section 2a), MFIP (Section 2b), SSI-CAP with standard benefits and standard shelter expenses (Section 2c), and medical deduction demonstrations (Section 2d).

a. Higher Asset Limits

In FY 2012 in Idaho, Michigan, and Texas, all SNAP units may have up to \$5,000 in countable assets based on the State's Broad Based Categorical Eligibility (BBCE) policy.

b. Minnesota Family Investment Program (MFIP)

The Minnesota Family Investment Program (MFIP) is Minnesota's TANF program, open to low-income families with children.¹⁶ MFIP calculates participants' food assistance and cash assistance benefits together. Therefore, the SNAP benefit calculation differs from the federal formula. Both the maximum food assistance portion and maximum cash assistance portion of the MFIP benefit are based on unit size and are higher for families with earnings (see Table F.8). To calculate the benefits, countable income is subtracted from the combined maximum food portion

¹⁴ The Farm Security and Rural Investment Act of 2002 allows court-ordered child support expenses paid to another household to be excluded from gross income rather than counted as a deduction. For units excluding it from gross income, we check that gross income minus child support expenses is at or below 130 percent of the poverty guideline.

¹⁵ This test is not performed on SNAP units identified as participating in MFIP or an SSI-CAP demonstration in the 15 States using standard benefits.

¹⁶ More information is available on Minnesota's Department of Human Services (DHS) website (<http://www.dhs.State.mn.us/>).

and cash portion, with a 38 percent earnings deduction applied to earned income. If the total benefit amount is less than or equal to the maximum food portion, the unit receives only food assistance. If the benefit is greater than the maximum food portion, the unit receives the remainder of the benefit as cash assistance. MFIP units receive no income deductions other than the earnings deduction.

Because cash TANF income for MFIP units is not used in the SNAP benefit calculation, TANF receipt is not recorded on the QC data for the vast majority of units. However, we code all MFIP units as pure PA. It is important to note that we do not calculate the TANF benefit (the cash portion) after we calculate the SNAP portion.

Below, we describe the calculation of the food portion of the benefit and differences in the general editing procedures that reconcile unit-level income with person-level income. (See Appendix F for FY 2012 cash and food portion values.)

1. **Flag units that are MFIP participants.** Recognizing that not all MFIP participants receive a cash benefit, we first attempt to identify MFIP-participating units. We flag any unit in Minnesota as an MFIP participant if it has one of the following characteristics:¹⁷
 - The unit has person-level TANF income for SNAP unit members, unless the SNAP benefit on the raw datafile appears to have been calculated using regular SNAP rules.
 - The unit has children and the benefit, adjusted for errors, matches the MFIP table of benefits for this unit size.
 - The unit has children, positive person-level earnings, and a positive reported earned income deduction, where the reported earned income deduction is 38 percent of the person-level earnings.
2. **Reconcile reported person-level income amounts with reported unit-level income and deduction variables.** The procedure for reconciling person-level income amounts with unit-level income and deductions is the same as for all other SNAP units except in the following cases:
 - We begin reconciling person-level income to unit-level gross income by excluding TANF from unearned income. At each step in reconciling to unit-level gross income described above, if person-level incomes with TANF excluded do not

¹⁷ MFIP's unit composition rules differ from those under the regular SNAP. Specifically, SSI and TANF recipients living in the same household are treated as separate SNAP units. Consequently, if a Minnesota unit of more than one person had both SSI and TANF income, we set the affiliation code of the SSI recipient to unknown (99).

equal the unit-level gross income, we try including TANF income to see if its addition allows us to reconcile to unit-level gross income.¹⁸ The final calculated gross income includes any TANF income initially included on the raw datafile.

- We do not attempt to reconcile MFIP participants' person-level income with reported unit-level net income because net income is not used in the same way for the MFIP benefit as it is in the federal program. The calculated net income variable is coded as missing for all MFIP units.
3. **Earned income deduction.** For MFIP units, we calculate the earned income deduction as 38 percent of earnings.
 4. **Final deductions.** We code all deductions except the earned income deduction and total deduction as missing for MFIP participants.
 5. **Food Benefit calculation.** We determine the benefit depending on unit characteristics:
 - If the unit has no income, then the benefit is the food portion for the unit size.
 - If the unit has only earned income, the benefit is the minimum of the food portion and the difference between the family wage level (the income threshold for units with earnings) and net earnings, but never less than 0.
 - If the unit has only unearned income, the benefit is the minimum of the food portion and the difference between the transitional standard (the income threshold for units without earnings) and net unearned income, but never less than 0.
 - If the unit has both earned and unearned income, we subtract net earned income from the family wage level and compare the difference to the transitional standard. We then subtract unearned income from the smaller of the two (to ensure that the wages were high enough to merit the full increase to the family wage level). The benefit amount is the minimum of this difference or the food portion, but never less than 0.
 - For one- and two-person SNAP units, we set the benefit amount to the higher of the calculated benefit or the minimum federal SNAP benefit.

c. SSI-CAP Units

In FY 2012, 18 States—Arizona, Florida, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Mississippi, New Jersey, New Mexico, New York, North Carolina, Pennsylvania, South Carolina, South Dakota, Texas, Virginia, and Washington—had Combined Application Project (CAP) demonstrations. These are demonstration projects aimed at streamlining the procedures for

¹⁸ With the cash portion of the benefit calculated at the same time as the food portion of the benefit, we do not expect TANF income to be included in a unit's total gross income. However, in some unit records, TANF income is included and we accept it as verification that the recorded gross income is correct.

providing SNAP benefits to certain units that are eligible for both SNAP and SSI. SSI-CAP participation in the above States is generally limited to one-person elderly units with SSI and no earned income. Here, we describe the 18 programs and our procedures for identifying and editing SSI-CAP SNAP units for the SNAP QC database.

1. SSI-CAP Programs with a Standard Benefit

Fifteen States operate programs that provide participants with a standard “high” or “low” benefit based on whether participants’ shelter expenses fall above or below a State-determined threshold; the States are Arizona, Kentucky, Louisiana, Maryland, Michigan, Mississippi, New Jersey, New Mexico, New York, North Carolina, Pennsylvania, South Carolina, South Dakota, Texas, and Virginia. Given that net income and deductions are not used in calculating benefits and consequently do not have the same meaning for SSI-CAP units, we set those variables to missing (.E). More specifically, the variables set to missing for SSI-CAP participants in the 15 States are final net income (FSNETINC), total deductions (FSTOTDED), standard deduction (FSSTDDED), medical deduction (FSMEDDED), earned income deduction (FSERNDED), dependent care deduction (FSDEPDED), child support expense deduction (FSCSDED), homeless deduction (HOMELESS_DED), excess shelter deduction (FSSLDED), and standard utility allowance (SUA1 and SUA2). However, the raw variables indicating the actual costs are usually retained.

Arizona

The Arizona Simplified Nutritional Assistance Program (AZSNAP) was implemented on February 1, 2009. It is open to individuals age 65 or older who live alone, receive SSI benefits, and have no earned income. The program has four standard benefit amounts that are based on total shelter expenses (see Appendix F, Table F.9). Below, we describe our process for identifying, recoding, and assigning benefits for AZSNAP units.

- 1. Identifying AZSNAP Units.** We identify as AZSNAP participants all units with a certification period of 36 months that contain only one individual coded as a SNAP participant who is age 65 or older, report receiving SSI benefits, have no reported earned

income, and have a recorded benefit equal to any of the AZSNAP standard benefit amounts.

2. **Recodes for AZSNAP Units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit Calculations for AZSNAP Units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the unit's rent/mortgage expenses (RENT) value in Appendix Table F.9.

Kentucky

The Kentucky Simplified Assistance for the Elderly (KYSAFE) program was implemented in fiscal year 2007 and is open to people age 60 and older who live alone or are married, and receive SSI benefits. Participants may have other income (either earned or unearned) in addition to SSI. Married couples may participate, but each individual must meet the eligibility criteria to be treated as a member of the same SNAP unit. The program has four standard benefit amounts that are based on total shelter expenses and unit size (see Appendix F, Table F.10). Below, we describe our process for identifying, recoding, and assigning benefits for KYSAFE units.

1. **Identifying KYSAFE units.** We identify as KYSAFE participants all units with a certification period of 36 months and a recorded benefit equal to any of the KYSAFE standard benefit amounts that also contain either:
 - Only one person coded as a SNAP participant, who is age 60 or older and reports receiving SSI benefits.
 - Only a married couple where both individuals are SNAP participants age 60 or older who report receiving SSI benefits.
2. **Recodes for KYSAFE units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit Calculation for KYSAFE units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the unit's rent/mortgage expenses (RENT) and unit size in Appendix Table F.10.

Louisiana

The Louisiana Combined Application Project (LaCAP) was implemented in fiscal year 2007 and is open to individuals age 60 or older who live alone, have no earned income, and receive SSI

benefits. The program has four standard benefit amounts that are based on total shelter expenses (see Appendix F, Table F.11). Below, we describe our process for identifying, recoding, and assigning benefits for LaCAP units.

1. **Identifying LaCAP units.** We identify as LaCAP participants all units with a certification period of 36 months that contain only one individual coded as a SNAP participant who is age 60 or older, report receiving SSI benefits, have no reported earned income, and have a recorded benefit equal to any of the LaCAP standard benefit amounts.
2. **Recodes for LaCAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculations for LaCAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the unit's rent/mortgage expenses (RENT) in Appendix Table F.11.

Maryland

The Maryland Senior Nutrition Assistance Program (MSNAP) was implemented in July 2010 and is open to individuals age 60 or older who live alone, have no earned income, and receive SSI benefits. The program has two standard benefit amounts that are based on total shelter expenses (see Appendix F, Table F.12). Below, we describe our process for identifying, recoding, and assigning benefits for MSNAP units.

1. **Identifying MSNAP units.** We identify as MSNAP participants all one-person units that contain an individual age 60 or older, report receiving SSI benefits, have no reported earned income, and have a recorded benefit equal to any of the MSNAP standard benefit amounts.
2. **Recodes for MSNAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit Calculations for MSNAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the unit's shelter expenses (FSSLTEXP) in Appendix Table F.12.

Michigan

The Michigan Combined Application Project (MiCAP) was implemented on April 1, 2009. It is open to individuals age 18 or older who live alone, receive a maximum SSI benefit, and have no

other income. The program has two standard benefit amounts that are based on total shelter expenses (see Appendix F, Table F.13). Below, we describe our process for identifying, recoding, and assigning benefits for MiCAP units.

1. **Identifying MiCAP units.** We identify as MiCAP participants all units that contain only one individual coded as a SNAP participant who is age 18 or older, report receiving a maximum SSI benefit, have no other reported income, and have a recorded benefit equal to any of the MiCAP standard benefit amounts.
2. **Recodes for MiCAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculation for MiCAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the unit's shelter expenses (FSSLTEXP) in Appendix Table F.13.

Mississippi

The Mississippi Combined Application Project (MSCAP) was implemented in fiscal year 2001 and we began modeling it in fiscal year 2004. It is open to one-person SSI units with no earned income. The program has four standard benefit amounts that are based on whether a unit has other unearned income in addition to SSI benefits and on total shelter expense (see Appendix F, Table F.14). Mid-year benefit changes occurred in January 2012. Below, we describe our process for identifying, recoding, and assigning benefits for MSCAP units.

1. **Identifying MSCAP units.** When coding MSCAP units, QC reviewers attempt to work backwards from the standard benefit to make income and deductions consistent with the benefit for MSCAP participants. In a majority of potential MSCAP units, the gross income equals either the maximum SSI benefit for eligible individuals or the maximum SSI benefit plus \$20, reflecting the \$20 unearned income disregard for SSI. When these gross incomes are used in conjunction with the standard deduction and MSCAP standard shelter deduction (recorded as an SUA), the resulting net income is consistent with one of the standard MSCAP benefits. Additional units follow the same pattern closely but not exactly (see Appendix F for MSCAP benefits and income patterns). We flag as MSCAP participants one-person units that contain an individual coded as a SNAP participant who reports receiving SSI benefits and has no reported earned income if one of the following conditions is true:
 - The recorded benefit equals an MSCAP standard benefit and the recorded gross income or recorded net income is consistent with that benefit according to the

pattern followed in most units (allowing the recorded utility amount to be inconsistent).¹⁹

- The recorded benefit equals an MSCAP standard benefit and the recorded utility amount equals the higher MSCAP SUA (allowing the recorded gross and net income to be inconsistent).
 - The recorded utility amount equals the higher MSCAP SUA and the recorded gross income or recorded net income equals one of the income amounts consistent with the pattern (allowing the benefit to be inconsistent).²⁰
2. **Recodes for MSCAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, we perform the following recodes for units identified as MSCAP participants:
- **Shelter expenses.** QC reviewers recorded the utility expenses of most MSCAP participants as the MSCAP SUA. For units where such was not the case, we recoded the utility expense values (UTIL). In addition to a utility expense, some QC reviewers recorded a rent or mortgage value for MSCAP units. We recoded this value (RENT) as 0 because the MSCAP SUA reflects combined shelter expenses, including rent/mortgage.
 - **Income.** In most MSCAP units, the raw gross income equals either the maximum SSI benefit for eligible individuals or the maximum SSI benefit plus \$20, reflecting the \$20 unearned income disregard for SSI. We recode the raw gross income (RAWGROSS) of MSCAP units that do not follow this pattern. We set the sum of individual incomes equal to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculation for MSCAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the utility (UTIL) and raw gross (RAWGROSS) values in Appendix Table F.14.

New Jersey

The New Jersey Simplified Nutritional Assistance for Seniors (NJ SNAS) program was implemented on May 1, 2009. It is open to individuals age 65 and older who live alone, receive SSI benefits, and have no earned income. The program has two standard benefit amounts that are based on total shelter expenses (see Appendix F, Table F.15). Below, we describe our process for identifying, recoding, and assigning benefits for NJ SNAS units.

¹⁹ If the recorded benefit equals the minimum benefit, we require both gross income and net income to be consistent with the pattern.

²⁰ Because so few MSCAP-eligible units have allotment adjustments, we do not check for units where the recorded benefit plus or minus the allotment adjustment would equal an MSCAP standard benefit.

1. **Identifying NJ SNAS units.** We identify as NJ SNAS participants all one-person units that contain an individual coded as a SNAP participant who is age 65 or older, report receiving SSI benefits, have no reported earned income, have a certification period of 24 months, and have a recorded benefit equal to any of the NJ SNAS standard benefit amounts.
2. **Recodes for NJ SNAS units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculation for NJ SNAS units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the unit's shelter expenses (FSSLTEXP) in Appendix Table F.15.

New Mexico

The New Mexico Modified Combined Application Project (NMCAP) was implemented in June 2009 and is open to individuals age 22 or older who receive SSI benefits, live alone or with a spouse who also receives SSI, and have no earned income. The program has two standard benefit amounts that are based on total shelter expenses (see Appendix F, Table F.16). Benefit amounts changed in May 2012. Below, we describe our process for identifying, recoding, and assigning benefits for NMCAP units.

1. **Identifying NMCAP units.** We identify as NMCAP participants all units that contain an individual coded as a SNAP participant who is age 22 or older, report receiving SSI benefits, have no reported earned income, and have a recorded benefit equal to any of the NMCAP standard benefit amounts. All units must contain either only one person or two married individuals who both report SSI.
2. **Recodes for NMCAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculations for NMCAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the unit's shelter expenses (FSSLTEXP) in Appendix Table F.16.

New York

The New York State Nutrition Improvement Project (NYSNIP) was implemented in fiscal year 2003 and we began modeling it in fiscal year 2004. It is limited to one-person SSI units. NYSNIP has 18 standard benefit categories that vary by region, shelter costs, availability of shelter or SUA

data, and receipt of income other than SSI (Appendix F, Table F.17). The certification period for NYSNIP is four years with interim contact at the end of two years. Mid-year shelter cost threshold and benefit changes occurred in January 2012 and May 2012. Below, we describe our process for identifying, recoding, and assigning benefits for NYSNIP units.

1. **Identifying NYSNIP units.** We identify as NYSNIP participants one-person units that receive SSI benefits and belong to one of the following groups:^{21, 22}
 - Units whose recorded benefit matches an NYSNIP benefit and the benefit amount is consistent with the presence of unit income other than SSI, adjusting for the NY SSI supplement of \$87.
 - Units whose recorded benefit matches an NYSNIP benefit and whose medical and shelter deductions are both coded as 0.
 - Units whose certification period exceeds four years.
2. **Recodes for NYSNIP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculation for NYSNIP units.** For NYSNIP units with a recorded benefit that matches an NYSNIP benefit, we set the calculated benefit equal to the recorded benefit. For NYSNIP units with a recorded benefit that does not match an NYSNIP benefit, we calculate the benefit based on NYSNIP rules.

North Carolina

The North Carolina Simplified Nutrition Assistance Program (NCSNAP) was implemented in fiscal year 2005 and is open to individuals age 65 or older who live alone and receive SSI benefits. The program has two standard benefit amounts that are based on total shelter expenses (see Appendix F, Table F.18). Below, we describe our process for identifying, recoding, and assigning benefits for NCSNAP units.

1. **Identifying NCSNAP units.** We identify as NCSNAP participants all one-person units that contain an individual coded as a SNAP participant who is age 65 or older, report

²¹ New York requires NYSNIP participants to be living alone (not just forming one-person SNAP units) and provides data on the QC datafile that is sufficiently detailed for us to identify households consisting of just one person.

²² Because so few NYSNIP eligible units have allotment adjustments, we do not check for units where the recorded benefit plus or minus the allotment adjustment would equal an NYSNIP standard benefit.

receiving SSI benefits, and have a recorded benefit equal to any of the NCSNAP standard benefit amounts.

2. **Recodes for NCSNAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculation for NCSNAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the unit's rent/mortgage expenses (RENT) in Appendix Table F.18.

Pennsylvania

The Pennsylvania Combined Application Project (PACAP) was implemented in fiscal year 2007 and is open to one-person SSI units with an individual age 18 or older and no earned income. The program has four standard benefit amounts that are based on whether a unit has other unearned income in addition to SSI benefits and on total shelter expense (See Appendix F, Table F.19). Mid-year benefit changes occurred in January 2012. Below, we describe our process for identifying, recoding, and assigning benefits for PACAP units.

1. **Identifying PACAP units.** We identify as PACAP participants all one-person units that contain an individual coded as a SNAP participant who is age 18 or older, report receiving SSI benefits, have no reported earned income, and have a recorded benefit equal to any of the PACAP standard benefit amounts.
2. **Recodes for PACAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculation for PACAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the unit's rent (RENT) and presence or absence of unearned income other than SSI in Appendix Table F.19.

South Carolina

The South Carolina Combined Application Project (SCCAP) was implemented in 1995 and we began modeling it in 2004. It is open to one-person SSI units with no earned income. The program has four standard benefit amounts that are based on whether a unit has other unearned income in addition to SSI income and on total shelter expense (see Appendix F, Table F.20). Mid-year benefit

changes took place in December 2011 and January 2012. Below, we describe our process for identifying, recoding, and assigning benefits for SCCAP units.

1. **Identifying SCCAP units.** QC reviewers in South Carolina attempt to work backwards from the standard benefit to make income and deductions consistent with the benefit for SCCAP participants. A majority of SCCAP units follow a consistent pattern in terms of income and recorded shelter expenses. Additional units follow the same pattern closely but not exactly (see Appendix F for SCCAP benefits and income patterns). We flag as SCCAP participants one-person units that contain an individual coded as a SNAP participant, report receiving SSI benefits, and have no reported earned income if one of the following conditions is true:
 - The recorded benefit equals an SCCAP standard benefit, and the recorded gross income or recorded net income is consistent with that benefit according to the pattern followed in most units (allowing the recorded rent/mortgage amount to be inconsistent).
 - The recorded benefit equals an SCCAP standard benefit, and the recorded rent/mortgage amount equals the standard rent/mortgage amount used for SCCAP participants (allowing the recorded gross and net income to be inconsistent).²³
 - The recorded rent/mortgage amount equals the standard rent/mortgage amount used for SCCAP participants and recorded gross income or the recorded net income equals one of the income amounts consistent with the pattern (allowing the benefit to be inconsistent).²⁴
2. **Recodes for SCCAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, we perform the following recode for units identified as SCCAP participants:
 - **Shelter expenses.** For most SCCAP participants, QC reviewers recorded the utility expense value as the South Carolina HCSUA value and rent/mortgage as the standard SCCAP rent amount. We recode utilities (UTIL) and rent/mortgage (RENT) for SCCAP units that do not follow this pattern.
 - **Income.** In most SCCAP units, the raw gross income equals either the maximum SSI benefit for eligible individuals or the maximum SSI benefit plus \$20, reflecting the \$20 unearned income disregard for SSI. We recode the raw gross income (RAWGROSS) of SCCAP units that do not follow this pattern. We set the sum of individual incomes equal to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.

²³ Given that the SUA used for SCCAP units is identical to the SUA used for South Carolina units participating in the regular SNAP, it cannot be used to identify potential SCCAP units. However, unlike the regular SNAP, SCCAP uses standard rent/mortgage values, which we can use to identify potential SCCAP participants.

²⁴ Because so few SCCAP-eligible units have allotment adjustments, we do not check for units where the recorded benefit plus or minus the allotment adjustment would equal an SCCAP standard benefit.

3. **Benefit calculation for SCCAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the rent (RENT) and raw gross (RAWGROSS) values found in Table F.20.

South Dakota

The South Dakota Improved Nutrition Program (SD IN) was implemented in January 2010 and is open to individuals age 18 or older who live alone or are married and receive SSI benefits. Participants may have other income (either earned or unearned) in addition to SSI. Married couples may participate, but each individual must meet the eligibility criteria to be treated as a member of the same SNAP unit. The program has sixteen standard benefit amounts that are based on total shelter expenses, unit size, medical expenses, and earnings other than SSI benefits (see Appendix F, Table F.21). Below, we describe our process for identifying, recoding, and assigning benefits for SD IN units.

1. **Identifying SD IN units.** We identify as SD IN participants all units that have a recorded benefit equal to any of the SD IN standard benefit amounts and contain either:
 - Only one person coded as a SNAP participant, who is age 18 or older and reports receiving SSI benefits.
 - Only a married couple where both individuals are age 18 or older, participating in SNAP, and report receiving SSI benefits.
2. **Recodes for SD IN units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculation for SD IN units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that is consistent with unit size, shelter expenses (FSSLTEXP) the presence or absence of earned income (FSEARN), and the presence or absence of medical expenses (FSMEDEXP) as found in Table F.21.

Texas

The Texas Simplified Nutritional Assistance Program (SNAP-CAP) was implemented in fiscal year 2002 and we began modeling it in fiscal year 2004. It is limited to SSI recipients age 50 and older who were not receiving SNAP benefits for at least two months prior to current receipt of SSI. Participants may have other income (either earned or unearned) in addition to SSI benefits. Married

couples may participate but are treated as separate one-person units. In addition, SNAP-CAP treats elderly SSI participants independently of other household members. The program has two standard benefit amounts that are based on total shelter expenses (see Appendix F, Table F.22). Based on the data in the QC file, we identify units with one of two benefit values as CAP recipients for FY 2012. Below, we describe our process for identifying, recoding, and assigning benefits for SNAP-CAP units.

1. **Identifying SNAP-CAP units.** We identify as SNAP-CAP participants all units with SSI benefits, at least one person coded as a SNAP participant age 50 or older, and a recorded benefit equal to any of the SNAP-CAP standard benefit amounts.
2. **Recodes for SNAP-CAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, we perform the following recode for units identified as SNAP-CAP participants:
 - **SNAP participation and unit size.** According to SNAP-CAP rules, married couples may participate in the program but are treated as separate units. The QC data in some years include some SNAP-CAP units with married couples and a SNAP-CAP standard benefit where both partners are age 50 or older and both are coded as SNAP participants. In these units, we let the first SSI-recipient age 50 or older retain his or her status as an eligible member of the SNAP case under review and entitled to receive benefits (FSAFILi=1). For any additional individuals originally coded as SNAP participants, we add a new code “Eligible SNAP participant in another unit, not currently under review” (FSAFILi=2). We adjust the variable indicating unit size accordingly (FSUSIZE).
 - **Income.** In SNAP-CAP units that originally had more than one individual coded as a SNAP participant, we reset raw gross income (RAWGROSS) equal to the sum of the individual incomes assigned to the one individual who remains a SNAP participant (FSAFILi=1) after assigning the rest new status as participants outside the unit (FSAFILi=2). In other SNAP-CAP units, we reconcile individual incomes with the original gross income.
3. **Benefit calculation for SNAP-CAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the shelter expenses (FSSLTEXP) in Table F.22.

Virginia

The Virginia Combined Application Project (VaCAP) was implemented in fiscal year 2007 and is open to individuals age 65 or older who live alone, receive SSI benefits, and have no earned income. The program has two standard benefit amounts that are based on total shelter expenses (see

Appendix F, Table F.23). Below, we describe our process for identifying, recoding, and assigning benefits for VaCAP units.

1. **Identifying VaCAP units.** We identify as VaCAP participants all one-person units that contain an individual coded as a SNAP participant who is age 65 or older, report receiving SSI benefits, have no reported earned income, have a certification period of 36 months, and have a recorded benefit equal to any of the VaCAP standard benefit amounts.
2. **Recodes for VaCAP units.** In addition to setting calculated net income and all calculated deduction variables to missing as described above, if the sum of individual incomes does not equal the raw gross income, we edit them to sum to the raw gross income (RAWGROSS) by adjusting individual incomes proportionately, as necessary.
3. **Benefit calculation for VaCAP units.** We set the final calculated benefit equal to the standard SSI-CAP benefit that corresponds to the shelter expenses (FSSLTEXP) in Table F.23.

2. SSI-CAP Programs with a Standard Shelter Expense

Florida, Massachusetts, and Washington operate programs that assign participants a standard “high” or “low” shelter expense, and calculate the unit benefit on the basis of actual income, the standard deduction, the SUA, and the standard shelter expense. Because net income and a few deductions are used to calculate a benefit for SSI-CAP participants in these States, the variables are retained on the file. However, other deductions are not used for the benefit calculation, and those are set to missing. The variables set to missing for SSI-CAP participants in Florida, Massachusetts, and Washington include the medical deduction (FSMEDDED), earned income deduction (FSERNDED), dependent care deduction (FSDEPDED), child support expense deduction (FSCSDED), and homeless deduction (HOMELESS_DED). In addition, we recode the SUAs to differentiate SSI-CAP units from non SSI-CAP units who received the same SUA by setting SUA1 to 9 (“Other”). Similarly to SSI-CAP units with a standard benefit, when calculated deductions are set to missing, the raw variables indicating the actual costs are usually retained.

Florida

The Florida Combined Application Project (SUNCAP) was implemented in fiscal year 2005 and is open to one-person SSI units. While units with earnings are not eligible to enroll in SUNCAP,

once a unit participates, it may have earned income for up to three consecutive months without losing eligibility. SUNCAP benefits are based on actual income, the standard deduction, the standard shelter amount, and the SUA. The standard shelter amount is determined by the unit's actual monthly shelter expenses excluding utilities (Appendix F, Table F.24).

1. **Identifying SUNCAP units.** We identify as SUNCAP participants all one-person units with SSI benefits and a recorded rent/mortgage amount equal to any of the SUNCAP standard rent/mortgage allowances.
2. **Recodes for SUNCAP units.** In addition to setting the deductions that are not used in the SUNCAP benefit calculation to missing as described above, we reconcile individual incomes with the gross income in SUNCAP units by using the same process as for non-CAP units.
3. **Benefit calculation for SUNCAP units.** We use the regular SNAP benefit calculation.

Massachusetts

The Massachusetts Combined Application Project (BAYSTATE CAP) was implemented in fiscal year 2005 and is open to one-person units containing an individual age 18 or older with SSI. While units with earnings are not eligible to enroll in BAYSTATE CAP, once a unit participates it may have earned income for up to three consecutive months without losing eligibility. BAYSTATE CAP benefits are based on actual income, the standard deduction, the standard shelter amount, and the SUA. The standard shelter amount is determined by the unit's actual monthly shelter expenses excluding utilities (Appendix F, Table F.24).

1. **Identifying BAYSTATE CAP units.** We identify as BAYSTATE CAP participants all one-person units that contain an individual age 18 or older who reports receiving SSI benefits and have a recorded rent/mortgage amount equal to any of the BAYSTATE CAP standard rent/mortgage allowances. If the recorded rent/mortgage amount is not equal to the standard allowance, we calculate the benefit assuming that the standard allowance was used. If this calculated benefit matches the raw benefit, then we recode the rent/mortgage amount to be the standard allowance, and flag the unit as a BAYSTATE CAP participant.
2. **Recodes for BAYSTATE CAP units.** In addition to setting the deductions that are not used in the BAYSTATE CAP benefit calculation to missing as described above, we perform the following recode for units identified as BAYSTATECAP participants:
 - **Shelter expenses.** When necessary, we recode utilities of BAYSTATE CAP units to equal the Massachusetts HCSUA or LUA for one-person units.

- **Income:** We reconcile individual incomes with the gross income in BAYSTATE CAP units by using the same process as in non-CAP units.
3. **Benefit calculation for BAYSTATE CAP units.** We use the regular SNAP benefit calculation.

Washington

The Washington Combined Application Project (WASHCAP) was implemented in fiscal year 2001, and we began modeling it in fiscal year 2004. It is open to individuals age 18 or older in one-person SSI units with no earned income. WASHCAP benefits are based on actual income, the standard deduction, and the shelter deduction calculated according to a standard rent/mortgage amount and an SUA (Appendix F, Table F.24). Below, we describe our process for identifying and recoding WASHCAP units.

1. **Identifying WASHCAP units.** The QC data include two potential markers of WASHCAP participants. One is the standard rent/mortgage allowance. The second is a special local agency code used by QC reviewers for WASHCAP units whose applications were processed in an SSA office. Using the two markers, we identify as WASHCAP participants all one-person units that contain an individual age 18 or older coded as a SNAP participant, report receiving SSI benefits, have no reported earned income, and have a recorded rent/mortgage amount equal to any of the WASHCAP standard rent/mortgage allowance or is flagged with the special WASHCAP local agency code.
2. **Recodes for WASHCAP units.** In addition to setting the deductions that are not used in the WASHCAP benefit calculation to missing as described above, we perform the following recode for units identified as WASHCAP participants:
 - **Shelter expenses.** When necessary, we recode utilities of WASHCAP units (UTIL) to equal the Washington HCSUA for one-person units and rent/mortgage (RENT) to equal one of the standard rent amounts.
 - **Income.** We reconcile individual incomes with the gross income in WASHCAP units by using the same process as for non-CAP units.
3. **Benefit calculation for WASHCAP units.** We use the regular SNAP benefit calculation.

d. Medical Deduction Demonstration Programs

Twelve States have programs to standardize medical deduction amounts when units' medical expenses fall within a specified range (see also Appendix F, Table F.4). The States are as follows:

- **Arkansas.** Beginning in November, 2011, if units with an elderly or disabled member incur medical expenses less than \$139, the unit receives a medical deduction of \$103. Units with medical expenses of \$139 or more receive a

medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the higher SUA was reduced by \$4 for the entire caseload. The higher SUA modeled for Arkansas reflects this adjustment.

- **Illinois.** If units with an elderly or disabled member incur medical expenses less than \$246, the unit receives a medical deduction of \$210. Units with medical expenses of \$246 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the standard deduction was reduced by \$4 for the entire caseload.
- **Iowa.** If units with an elderly or disabled member incur medical expenses less than \$141, the unit receives a medical deduction of \$105. Units with medical expenses of \$141 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the higher SUA was reduced by \$4 for the entire caseload. The higher SUA modeled for Iowa reflects this adjustment.
- **Kansas.** If units with an elderly or disabled member incur medical expenses less than \$176, the unit receives a medical deduction of \$140. Units with medical expenses of \$176 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the higher SUA was reduced by \$8 for the entire caseload. The higher SUA modeled for Kansas reflects this adjustment.
- **Massachusetts.** If units with an elderly or disabled member incur medical expenses less than \$126, the unit receives a medical deduction of \$90. Units with medical expenses of \$126 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the higher SUA was reduced by \$7 for the entire caseload. The higher SUA modeled for Massachusetts reflects this adjustment.
- **Missouri.** If units with an elderly or disabled member incur medical expenses less than \$201, the unit receives a medical deduction of \$165. Units with medical expenses of \$201 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the standard deduction was reduced by \$18 for the entire caseload.
- **New Hampshire.** If units with an elderly or disabled member incur medical expenses less than \$119, the unit receives a medical deduction of \$83. Units with medical expenses of \$119 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the higher SUA was reduced by \$6 for the entire caseload. The higher SUA modeled for New Hampshire reflects this adjustment.
- **South Dakota.** If units with an elderly or disabled member incur medical expenses less than \$201, the unit receives a medical deduction of \$165. Units with medical expenses of \$201 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the higher SUA was reduced by \$10 for the entire caseload. The higher SUA modeled for South Dakota reflects this adjustment.
- **Texas.** If units with an elderly or disabled member that are not SNAP-CAP participants incur medical expenses less than \$138, the unit receives a medical

deduction of \$102. Units with medical expenses of \$138 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, both the higher SUA and lower utility standard were reduced by \$6 for the entire caseload. The higher SUA modeled for Texas reflects this adjustment.

- **Vermont.** Beginning on December 1, 2008, if units with an elderly or disabled member incur medical expenses less than \$174, the unit receives a medical deduction of \$138. Units with medical expenses of \$174 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the higher SUA was reduced by \$12 for the entire caseload. The higher SUA modeled for Vermont reflects this adjustment.
- **Virginia.** If units with an elderly or disabled member incur medical expenses less than \$176, the unit receives a medical deduction of \$140. Units with medical expenses of \$176 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the standard deduction was reduced by \$3 for the entire caseload.
- **Wyoming.** If units with an elderly or disabled member incur medical expenses less than \$139, the unit receives a medical deduction of \$103. Units with medical expenses of \$139 or more receive a medical deduction equal to actual medical expenses, minus \$35. To achieve cost neutrality, the higher SUA was reduced by \$7 for the entire caseload. The higher SUA modeled for Wyoming reflects this adjustment.

C. Derivation of Sampling Weights

The SNAP QC file's sampling weights are derived to reflect State and national caseload totals from SNAP Program Operations data after adjustments for receipt of disaster assistance benefits and benefits issued in error. They are intended to match monthly target levels of SNAP households, participants, and benefits.

To derive monthly weights, we first calculate preliminary weights that sum to the monthly number of SNAP units by State and stratum, as reflected in the adjusted SNAP Program Operations data. The tables in Appendix D show the preliminary monthly weights (HWGT) and their derivation for each State and stratum. We create the preliminary weights using these five major steps, presented in tables D.4-D.15:

1. In States that distributed disaster SNAP benefits, we lower the Program Operations counts in the month(s) of the disaster by the number of SNAP units receiving benefits specifically because of the disaster (not already participating SNAP units who receive additional benefits). (Column e)

2. For the States with stratified samples, we apportion the adjusted Program Operations counts across the strata according to the percentage of the sample that is in that stratum in that month. (Column f)²⁵
3. We calculate the disqualification rate by State and stratum by first identifying all disqualified SNAP units, which are those that the reviewers found “ineligible” (coded as STATUS = 4) and those the reviewers found “eligible” but not qualifying for a benefit (coded as STATUS = 2 with the error amount at least as large as the full benefit). The number of disqualified SNAP units divided by the number of SNAP units with completed reviews is the “disqualification” rate.²⁶ (Column i)
4. We lower the Program Operations counts of SNAP units by the disqualification rate calculated in Step 3 to derive the final adjusted Program Operations totals. (Column j)
5. We remove any additional SNAP units that do not appear to be eligible for SNAP either because they do not pass the asset or income tests and are not categorically eligible or because they do not qualify for a benefit.²⁷ (Column k)
6. We calculate a preliminary weight for each SNAP unit by State and stratum by dividing the final adjusted Program Operations count by the remaining number of SNAP units on the file. (Column m)

After deriving the preliminary weights, we use a nonlinear programming (NLP) technique to create final weights that produce estimates that match adjusted Program Operation monthly totals of units, participants, and benefits. Participant totals are adjusted by the number of individuals in units removed in Steps 1 and 4 above. Benefit totals are adjusted by benefits issued to units that were removed and by additional disaster benefits issued to units receiving regular SNAP benefits. The NLP algorithm incrementally changes the original weight until the three adjusted Program Operation monthly totals are matched, with the additional restriction that the final weights will not be less than 10 percent of the preliminary weights. The resulting monthly weights are no longer

²⁵ Column omitted from Appendix D tables due to space limitations but available upon request.

²⁶ The numerators of the disqualification rate and the FNS error rate differ as follows. The numerator of the disqualification rate includes units that received benefits, but were found by the reviewer to fail one of the income or asset tests or were found to pass the tests but not to qualify to receive a benefit, whereas the numerator of FNS’ error rate includes those that received benefits but are found to not pass one of the tests, receive too much in benefits (which includes those that pass the tests but did not qualify for a benefit), and those who receive too little in benefits.

²⁷ For the purposes of the QC Minimodel, we cannot keep these units on the file. However, they do not affect disqualification rates or the total number of weighted units.

identical to the preliminary weights or identical among units sampled in the same month, State and stratum.

To calculate standard errors using the bootstrap method, we use the NLP algorithm to compute 500 sets of replicate weights. Each set of replicate weights is calculated from a random sample of the raw SNAP QC datafile, using a methodology similar to the one described above.

Because the replicate weights are based on a random sample of raw SNAP QC data, there are occasionally instances when the NLP algorithm cannot find weights that match all three Program Operations totals within a certain State and month. When this happens, the algorithm attempts to match only the unit and individuals control totals for that particular State and month. If the algorithm cannot find weights that match both control totals, the replicate weights are set equal to the preliminary weights for that particular State and month.

The edited SNAP QC file contains two weight variables: the monthly weight (HWGT) and the full-year weight (FYWGT). HWGT is used for tabulations in specific months. If a tabulation is for a period longer than one calendar month, the average monthly value for the time period can be obtained by dividing HWGT by the number of months being analyzed. Tabulations of average monthly values for the entire fiscal year can be obtained by using FYWGT, which is HWGT divided by 12.

This page has been left blank for double-sided copying.

IV. DEVELOPMENT OF THE 2012 QC MINIMODEL

The QC Minimodel—one of FNS’ SNAP microsimulation models—uses the SNAP QC database to simulate the impact of various reforms to SNAP on current SNAP participants. The QC Minimodel uses a series of algorithms to simulate eligibility, benefits, and participation in SNAP. The algorithms are organized into the QC Minimodel’s SNAP Module (FSTAMP), which is divided into input-data specific (i.e. CPS, SIPP, or QC) and database-independent routines. This chapter provides a technical description of the input-data specific procedures used to transform characteristics of SNAP units within the SNAP QC database into the data elements that conform with inputs used with the database-independent algorithms of FSTAMP. The database-independent algorithms are documented in the *2012 Baseline of the 2009 MATH SIPP+ Microsimulation Model: Programmer’s Guide, Technical Description, and Codebook* (Schechter and Smith 2012).

A. Create MATH-Style Version of SNAP QC Database

1. Introduction

The QC Minimodel requires a binary file in a particular format (MATH™ style)²⁸ as input. This section describes the procedure used to create the binary file from the SAS version of the SNAP QC database. A two-step process is required to generate the final binary file in the MATH format: (1) create a binary file from the SAS dataset, and (2) run a tally using the binary file from Step 1 to finalize the binary file for use with the QC Minimodel.

2. User Parameters

None.

²⁸ MATH stands for Micro Analysis of Transfers to Households.

3. Programmer's Guide

a. Input file for Step 1

QCFY2012.SAS7BDAT Final SNAP QC database, in SAS format.

b. Output files from Step 1

MATHPC.HDR ASCII header file that describes the record layout of the database file, MATHPC.BIN.

MATHPC.BIN QC database file in standard binary form, in a hierarchical format (household record and then person records for individuals in the household).

c. Program for Step 1

MINIQC12.SAS

d. Output variables for Step 1

The variables are the same as those in the final SNAP QC database.

e. Input files for Step 2

MATHPC.HDR From Step 1.

MATHPC.BIN From Step 1.

f. Output files from Step 2

MATHPC.HDR ASCII header file that describes the record layout of the database file, MATHPC.BIN, in final MATH format.

MATHPC.BIN QC database file in standard binary form, in a hierarchical format (household record then person records for individuals in the household), in final MATH format.

g. Programs for Step 2

Subroutine Tally:

- Rename unit-level variable FSDEPDED to HDEPDED (because FSDEPDED is reserved as a MATH model variable name)
- Delete the variable SEEDP and generate a new person-level SEEDP that is compatible with the MATH model random number generator MATHRAND.

- Create a person-level baselaw variable FSNDIS (the number of nonelderly disabled individuals in the unit) on the unit head's record, by summing over individuals in the unit with DISi = 1. Set FSNDIS to '0' for all other individuals.
- Create a person-level baselaw variable FSNONCIT (the number of noncitizens in the unit) on the unit head's record, by summing over individuals in the unit with CTZN > 2. Set FSNONCIT to '0' for all other individuals.
- Create a person-level baselaw variable FSALLPA from the unit-level PURE_PA and set it to '0' for all, or '1' for the unit head if PURE_PA = 1.

h. Output variables for Step 2

The variables are the same as those in the SNAP QC database, plus the newly created variables.

4. Technical Description

The following is a brief description of the procedures used to create a binary MATH-style version of the SNAP QC database.

a. Create preliminary binary file

We create a hierarchical file in standard binary format that contains one household-record per household in the SNAP QC database. Within each household, we create one person-record for each person represented in the SNAP QC database and then convert proprietary SAS missing data codes as follows:

- . -1 (blank on raw QC file)
- .A -2 (coded by Mathematica as out of range)
- .B -3 (coded by QC reviewer as unknown)
- .C -4 (unable to construct variable)
- .D -5 (household participating in month not certified)
- .E -6 (MFIP and SSI-CAP units, variable not relevant in benefit determination)

b. Create preliminary header file

We update header values for the current year, as illustrated below:

| | |
|-------------|---------------|
| MATHPC.BIN | FILE NAME |
| 07/09/2013 | CREATION DATE |
| 17:10:52.56 | CREATION TIME |
| FY2012 | BASE YEAR |

| | |
|---------|------------------|
| FY2012 | YEAR AGED TO |
| avg | SIMULATION MONTH |
| 50,027 | HOUSEHOLD COUNT |
| QC MINI | MODEL LABEL |
| 2012.00 | MODEL VERSION |

We edit by hand the MATHPC.HDR file so that its record layout matches the output statement in MINIQC12.SAS.

c. Create final binary and header files

Using the output from MINIQC12.SAS, we run a QC Minimodel-based program to generate the final version of the QC Minimodel database. This program:

- Creates person-level seeds to be used with random number generator.
- Creates the variables FSDEPDED, FSNDIS, FSNONCIT, FSALLPA, and FSASTEST.

B. QC-Specific Portion of the QC Minimodel

1. Introduction

The QC Minimodel software is segregated into database-independent (generic) and database-specific components. In this section, we document the QC-specific portion of the model.

2. User Parameters

The QC minimodel contains 23 model-specific user parameters:

1. SHELCAP1 is the shelter limit for the contiguous US, Alaska, Hawaii, Guam and the Virgin Islands.
2. MN_BEN is a table by SNAP unit size with entries for the food portion amounts and the cash portion amounts required for calculating the benefit for MFIP participants.
3. MNERNDED is the value used for calculating the earned income deduction for MFIP participants.
4. XMN_FIP is a flag that allows us to exclude MFIP participants from a reform.
5. XSCAP_AZ is a flag that allows us to exclude AZSNAP participants from a reform.
6. XSCAP_FL is a flag that allows us to exclude SUNCAP participants from a reform.
7. XSCAP_KY is a flag that allows us to exclude KYSAFE participants from a reform.
8. XSCAP_LA is a flag that allows us to exclude LaCAP participants from a reform.
9. XSCAP_MA is a flag that allows us to exclude BAYSTATECAP participants from a reform.
10. XSCAP_MD is a flag that allows us to exclude MSNAP participants from a reform.
11. XSCAP_MI is a flag that allows us to exclude MiCAP participants from a reform.

12. XSCAP_MS is a flag that allows us to exclude MSCAP participants from a reform.
13. XSCAP_NC is a flag that allows us to exclude NCSNAP participants from a reform.
14. XSCAP_NJ is a flag that allows us to exclude NJ SNAS participants from a reform.
15. XSCAP_NM is a flag that allows us to exclude NMCAP participants from a reform.
16. XSCAP_NY is a flag that allows us to exclude NYSNIP participants from a reform.
17. XSCAP_PA is a flag that allows us to exclude PACAP participants from a reform.
18. XSCAP_SC is a flag that allows us to exclude SCCAP participants from a reform.
19. XSCAP_SD is a flag that allows us to exclude SD IN program participants from a reform.
20. XSCAP_TX is a flag that allows us to exclude SNAP-CAP participants from a reform.
21. XSCAP_VA is a flag that allows us to exclude VaCAP participants from a reform.
22. XSCAP_WA is a flag that allows us to exclude WASHCAP participants from a reform.
23. DOSTAT allows us to include or exclude table statistics in Tables 1, 6a, 8, 9, and 10.

For a list of generic FSTAMP user parameters, see documentation for the database-independent portion of the SNAP model (FSTAMP) in the *2012 Baseline of the 2009 MATH SIPP+ Microsimulation Model: Programmer's Guide, Technical Description, and Codebook* (Schechter and Smith 2012).

3. Programmer's Guide

a. Input files

| | |
|------------|---|
| MATHPC.PRM | User parameter file (text file). |
| MATHPC.HDR | ASCII header file that describes the record layout of the database file, MATHPC.BIN. |
| MATHPC.BIN | SNAP QC database file in standard binary form, in a hierarchical format (unit record, and then person records for individuals in the unit). |

b. Output files

| | |
|--------------------------|---|
| MATHPC.HDR ²⁹ | ASCII header file that describes the record layout of the output database file, MATHPC.BIN. |
| MATHPC.BIN | SNAP QC database file in standard binary form, in a hierarchical format (unit record, and then person records for individuals in the unit). |
| MATHPC.TAB | Summary tables. |
| MATHPC.OUT | Debug file. |

c. Programs

i. Subroutines

| | |
|----------------------------|--|
| db_fs_counts | Increments debug counters and prints totals to MATHPC.OUT file. |
| db_fs_hh_definers | Creates variables that describe fixed characteristics of the SNAP household, such as the size of the household, as listed in the SNAP QC database. |
| db_fs_display_partic_debug | Dummy routine for generic code compatibility. |
| db_fs_asset | Counts database-specific assets for SNAP households; since the SNAP QC database contains a reported value of household SNAP assets, the routine is empty. It is included for generic code compatibility. |
| db_fs_unit | Identifies which household members belong to which SNAP unit and determines whether a person is categorically excluded from any SNAP unit. |
| db_fs_locate_vars | Locates the database-specific input variables. |
| db_fs_parm_array_sizes | Sets the size of database-specific arrays. |
| db_fs_readparm | Reads database-specific user parameters from parameter file. |
| db_fs_validate_parm | Validates the user parameters using database-specific criteria. |
| db_fs_participation | Determines whether or not eligible units participate. |

²⁹ Note that MATHPC.HDR and MATHPC.BIN are created only when the WRFILE is set to T (true).

| | |
|----------------------------|--|
| db_fs_display_debug | Prints database-specific debug about SNAP units and their eligibility determination. |
| db_fs_vars | Creates SNAP unit summary variables (e.g., FSGRINC, FSNETINC). |
| db_fs_calc_benefit | Computes the benefit for participants in State programs with nonstandard benefit calculations. |
| db_fs_calc_pure_pa | Calculates FSALLPA, the pure PA flag. |
| db_fs_set_fsgptest | Recomputes gross income test for units with child support payment expenses. |
| db_fs_save_generic_vars | Dummy routine for generic code compatibility. |
| db_fs_display_summ_debug | Dummy routine for generic code compatibility. |
| db_fs_table_b | Dummy routine for generic code compatibility. |
| db_fs_prob_distr_tab | Dummy routine for generic code compatibility. |
| db_fs_calc_categ_elig | Dummy routine for generic code compatibility. Placeholder for any new BBCE coding. |
| db_fs_display_partic_debug | Dummy routine for generic code compatibility. Placeholder for any new participation algorithm debug. |

ii. Functions

Calc_povline Calculates poverty line by unit size and location

iii. Modules

| | |
|-------------|---|
| fs_dbdefine | Common storage for database-specific household definer variables. |
| fs_dblocs | Common storage for database-specific variable locations. |
| fs_dbparm | Common storage for model-specific variable locations. |
| fs_dbwork | Common storage for some working variables. |

d. Output Variables

None. The database-independent portion of the MATH FSTAMP model creates all output variables.

4. Technical Description

a. Overview

The primary purpose of the QC-specific model algorithms is to use QC-specific data elements to construct the variables needed by the database-independent portion of FSTAMP. The most important QC-specific model algorithms are those in the `db_fs_vars` subroutine (found in `DBVARS.F90`). The specifications for these algorithms are found in Section f below.

b. Validate User Parameters

i. Purpose

Although not QC-specific, two of the generic FSTAMP user parameters must have certain values for the QC model – `BASELAW` and `FS_VARS`.

ii. Specification

The QC model does not support `BASELAW = ' ' (baselaw simulation)`, because the baselaw simulation is determined by the QC file editing process rather than by FSTAMP (although the results of the QC file editing algorithms match the results of the FSTAMP algorithms exactly). For new baselaw runs, a new file created with `WRFILE = T` should be saved, and policy change simulations can be run off this baselaw by setting `BASELAW =` the suffix of the variables from the new baseline and setting `FS_VARS = BASELAW+1`. For example, if baselaw variables have a suffix of “1” a new reform is created with `FS_VARS = 2` and saved as a new baseline. The new file now has two sets of variables, one with suffix = “1” and the other with suffix = “2”. To use the new baseline in a policy change simulation, point `INDIR` to the new file and set `BASELAW = “2”` and `FS_VARS = “3”`.

`FS_VARS = 1` is not allowed, because the variables with a suffix of “1” are always on the file. The original “suffix 1” variables are always needed by the `DBVARS` routine for imputing medical, shelter, and child support payment expenses, and countable assets (when the unit composition is not

that of the original unit). Users who change the “suffix 1” set of variables on the file should make sure that they understand the impact on the DBLOCKS, DBDEFINE, and DBVARS calculations.

c. Locate the Input Variables Used and the Output Variables Created

i. Purpose

During KEOF = 1, before processing household records, obtain pointers to variables needed as input to the database-specific model algorithms.

ii. Specification

Use the LOCVAR supervisor routine to obtain and store locations for the following variables:

| | | | |
|-----------|------------|--------------|---------|
| AGE | FSASSET 1 | HOMELSDDED | SSI |
| CAT_ELIG | FSCSDED | LOCALCOD | SSI_CAP |
| CONT | FSDIS | MED_DED_DEMO | STATE |
| CSUPRT | FSMEDEXP | MINIMUM_BEN | STRATUM |
| CTZN | FSNDIS 1 | MN_FIP | TANF |
| DEEM | FSNELDER 1 | OTHERN | UNEMP |
| DIS | FSNKID 1 | OTHGOV | VET |
| DIVER | FSSLTEXP | OTHUN | WAGES |
| DPCOST | FSUN 1 | PURE_PA | WCOMP |
| EDLOAN | FSUSIZE 1 | RACETH | WGESUP |
| EITC | FSVEHAST | RCNTACTN | WRKREG |
| EMPRG | FYWGT | REL | YRMONTH |
| ENERGY | GA | SEX | |
| EXFSCSDED | HDEPDED | SLFEMP | |
| FSAFIL | HOMEDDED | SOCSEC | |

d. Construct Household Definer Variables

i. Purpose

For each household, we create household definer variables that are used in subsequent calculations.

ii. Specification

We set WGT to FYWGT. We set geographic indicators for U.S., Alaska, Hawaii, Guam, and Virgin Islands. GEOG_DED indexes the standard deduction, dependent care deduction, and

shelter deduction arrays; GEOG_SCRN indexes the gross and net income screen arrays; GEOG_BEN indexes the maximum benefit array; and GEOG_POV indexes the POVMONTH array.

```

select case (state%ihhld)
  case(15)                                !! hawaii
    geog_ded = 3
    geog_scrn = 3
    geog_ben = 5
  case(2)                                  !! alaska
    geog_ded = 2
    geog_scrn = 2
    select l_minimum_ben%ihhld
      case(24)                              !! alaska rural i
        geog_ben = 3
      case(30)                              !! alaska rural ii
        geog_ben = 4
      case default
        geog_ben = 2                        !! alaska urban is default
    end select
  case(66)                                  !! guam
    geog_ded = 4
    geog_scrn = 1
    geog_ben = 6
  case(78)                                  !! virgin islands
    geog_ded = 5
    geog_scrn = 1
    geog_ben = 7
  case default
    geog_ded = 1
    geog_scrn = 1
    geog_ben = 1
end select

geog_pov = geog_scrn

region = region_lookup(state%ihhld)
fstate = state%ihhld

```

We set skip_hh_flags for MN_FIP and SSI_CAP units according to the “skip” parameters, which vary by State.

We assign SNAP reporting status, FS_REPORTER, and set it to true for all units.

We obtain *original* SNAP QC database values for imputation of shelter expenses, medical expenses, child support expenses, and dependent care deductions (FSSLTEXP, FSMEDEXP, FSCSDDED, FSDEPDDED) in cases where the SNAP unit is not the original SNAP unit. Note that all

of the calculations below *must* be based on the original SNAP unit and its data, even if a new baselaw has been constructed. Also, we set original assets and original unit counts and flags.

```

orig_fsmedexp = l_original_fsmedexp%ihhld
orig_fssltxp = l_original_fssltxp%ihhld
orig_fsdepded = l_original_fsdepded%ihhld
orig_fscsded = l_original_fscsded %ihhld

orig_fsuhead = 0
do ip = 1, ctprrh
if (l_original_fsun%iper(ip) == ip) orig_fsuhead = ip
enddo
orig_fsusize = l_original_fsusize %iper(orig_fsuhead)
orig_fsnkid = l_original_fsnkid %iper(orig_fsuhead)
orig_fsnelder = l_original_fsnelder%iper(orig_fsuhead)
orig_fsndis = l_original_fsndis %iper(orig_fsuhead)
orig_fsasset = l_original_fsasset %iper(orig_fsuhead)
orig_kids_lt15 = 0
hhtanf = 0
do ip = 1, ctprrh
if (l_tanf%iper(ip) > 0) hhtanf = hhtanf + tanf%iper(ip)
if (l_original_fsun%iper(ip) == 0) cycle
if (l_age%iper(ip) < 15 &
.and. age%iper(ip) >= 0) orig_kids_lt15 = orig_kids_lt15 + 1
enddo

```

e. Construct SNAP Unit

i. Purpose

We use the “FSUN 1” code to construct the SNAP unit. We make sure that every SNAP unit has a head.

ii. Specification

We assign FSUN (SNAP unit number) to each person in the household:

```

do ip = 1, ctprrh
  fsun(ip) = l_original_fsun%iper(ip)
enddo

```

We identify units that no longer have a head due to a policy change simulation, and assign them a new head:

```

do ip = 1, ctprrh
  if (fsun(ip) == 0) cycle
  if (fsun(fsun(ip)) /= fsun(ip)) then
    do jp = ip+1, ctprrh
      if (fsun(jp) == fsun(ip)) fsun(jp) = ip
    enddo
    fsun(ip) = ip
  endif
enddo

```

f. Create SNAP Unit Summary Variables

i. Purpose

We summarize characteristics of each SNAP unit by adding the countable income of all household members and counting various types of people in the unit (such as number of elderly members and number of children).

ii. Specification

For each unit, we aggregate the countable income of all members in the household. Gross income is the sum of all earned and unearned income. When appropriate, we exclude child support expenses from the gross income. (There are separate values that indicate expenses to be subtracted before the gross income test (EXFSCSDED) and from expenses to be subtracted before the net income test (FSCSDED)).

We loop over all individuals in the household:³⁰

```
do ip = 1, cprhh
  !----- WELFARE Support (Note: missing income values are coded as < 0)
  if (L_tanf%iper(ip) > 0) fstanf(iunit) = fstanf(iunit) + L_tanf%iper(ip)
  if (L_ssi %iper(ip) > 0) fsssi (iunit) = fsssi (iunit) + L_ssi %iper(ip)
  if (L_ga %iper(ip) > 0) fsga (iunit) = fsga (iunit) + L_ga %iper(ip)

  !----- Earnings
  if (L_wages %iper(ip) > 0) fsearn(iunit) = fsearn(iunit) + L_wages %iper(ip)
  if (L_othern%iper(ip) > 0) fsearn(iunit) = fsearn(iunit) + L_othern%iper(ip)
  if (L_slfemp%iper(ip) > 0) fsearn(iunit) = fsearn(iunit) + L_slfemp%iper(ip)

  !---- Other unearned income
  if (L_eitc%iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_eitc%iper(ip)
  if (L_othgov%iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_othgov%iper(ip)
  if (L_socsec%iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_socsec%iper(ip)
  if (L_unemp %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_unemp%iper(ip)
  if (L_vet %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_vet%iper(ip)
  if (L_wcomp %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_wcomp %iper(ip)
  if (L_edloan%iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_edloan%iper(ip)
  if (L_csupt%iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_csupt%iper(ip)
  if (L_deem %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_deem %iper(ip)
  if (L_cont %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_cont %iper(ip)
  if (L_othun %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_othun %iper(ip)
  if (L_diver %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_diver %iper(ip)
  if (L_wgesup %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + L_wgesup %iper(ip)
```

³⁰ All individuals in the household include all individuals in the SNAP unit under review, plus individuals outside the unit that contribute income to the unit.

```

    if (l_energy %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + l_energy %iper(ip)
end do ! end of person loop

fsgrinc(iunit) = fsgrinc(iunit) + fsearn(iunit) + fsssi(iunit) + fsTANF(iunit) + fsga(iunit)
fsgrinc(iunit) = fsgrinc(iunit) - exfscsded%iper(iunit)
end do ! end of unit loop

```

For each unit, we loop over individuals in the unit and count unit members with various characteristics:

- Total members.
- Number of adults and number of female adults (those with missing age are included as adults).
- Number of children, number of school-aged children, number of toddlers (children under age two), and number of children older than toddlers.
- Number of elderly members.

```

do iunit = 1, ctprhh
do ip = 1, ctprhh
    if (fsun(ip) /= iunit) cycle ! cycle if person not in the SNAP unit
    fsusize(iunit) = fsusize(iunit) + 1
    if (l_age%iper(ip) > max_kid_age .or. l_age%iper(ip) < 0) then
        fsnadult(iunit) = fsnadult(iunit) + 1
        if (sex%iper(ip) == 2) femadults = femadults + 1
    else
        fsnkid(iunit) = fsnkid(iunit) + 1
        if (l_age%iper(ip) >= min_school_age) fsnk5t17(iunit) = fsnk5t17(iunit) + 1
        if (l_age%iper(ip) < max_toddler_age) then
            fndepl2(iunit) = fndepl2(iunit) + 1
        else
            fndepge2(iunit) = fndepge2(iunit) + 1
        end if
    end if

    if (l_age%iper(ip) >= min_elderly_age) fsnelder(iunit) = fsnelder(iunit) + 1
end do ! end of person loop
end do ! end of loop over all fs units in the household

```

We identify SNAP units headed by a single female. This is not used for any eligibility determination. It is used for summary counts only (Gainer/Loser tables).

```

if (fsnadult(iunit) == 1 .and. femadults==1 .and. fsnkid(iunit) >0) fsngmom(iunit) = 1

```

g. Impute Assets, Shelter Expenses, Medical Expenses, Homeless Deduction, and Child Support Payment Expenses When SNAP Unit Is Not the Original SNAP Unit

i. Purpose

Asset and expense data recorded on the SNAP QC database pertain to the actual SNAP unit sampled by the QC System. However, the QC Minimodel has the capability to simulate SNAP units with compositions that are different from the composition of the original SNAP unit by removing individuals with certain characteristics from the original SNAP unit.

The QC system records countable income at the person level for every household member whose income is used to determine the SNAP unit's eligibility. However, asset and expense data are recorded only at the unit level for the original SNAP unit. Thus, the QC Minimodel uses the original SNAP unit's asset and expense data, along with algorithms described below, to impute expenses and assets for any simulated SNAP unit that has a composition different from that of the original SNAP unit.

Many different algorithms could be used to impute assets and expenses in simulations that involve changes to SNAP unit composition. The best algorithm to use depends on the type of policy change to be simulated. The algorithms described below have been incorporated into the QC Minimodel because they have been used for numerous policy change simulations requested by FNS. These algorithms will work well for many types of simulations, but they are not designed to be generally applicable.

ii. Specification

Countable Assets. For all simulated SNAP units, the QC Minimodel assigns the countable assets of the original SNAP unit:

$$fsasset(iunit) = orig_fsasset$$

While the value of countable assets is kept constant when the unit composition changes, the removal of certain individuals from the SNAP unit may mean that a different asset limit is

applicable, thus resulting in some units losing asset eligibility. For example, the removal of elderly or disabled individuals from the SNAP unit would lead to a lower asset limit.

Shelter Expenses. For all simulated SNAP units, the QC Minimodel assigns shelter expenses equal to the product of the number of individuals in the unit and the per capita shelter expenses of the original SNAP unit:

$$\text{fssltxp}(iunit) = \text{nint}(\text{orig_fssltxp} * \text{float}(\text{fsusize}(iunit)) / \text{orig_fsusize})$$

In reality, a household's shelter expenses are assigned to each SNAP unit in the household, based on the share of shelter expenses actually *paid* by each member of each SNAP unit. Although the QC data contain no information regarding which individuals are responsible for paying shelter expenses, one could impute payment responsibility based on income; a person with 65 percent of a household's income would be assumed to be responsible for paying 65 percent of the household's shelter expenses. Again, the best imputation depends on the type of policy change to be simulated.

Medical Expenses. The QC Minimodel imputes medical expenses based either on the number of elderly and disabled individuals in the original unit. If the original unit contains no elderly individuals and no disabled individuals, then a medical deduction is not allowed—either in the original QC file editing process or in any QC Minimodel simulations. In reforms, the medical expense is prorated by the ratio of elderly and disabled individuals in the reform relative to the number of elderly and disabled individuals in baselaw:

```
if (orig_fsmedexp > 0) then
  if (orig_fsnelder + orig_fsndis > 0) then
    fsmedexp(iunit) = nint (real (orig_fsmedexp * (fsnelder(iunit) + fsndis(iunit))
      / (orig_fsnelder + orig_fsndis))
  end if
else
  fsmedexp(iunit) = 0
endif
```

In addition, we identify units participating in medical deduction demonstration programs in the 12 States with such demonstrations. See Appendix F, Table F.4 for more detail on the standard medical deduction amounts for these States.

Child Support Payment Expenses. The QC Minimodel imputes the child support payment expenses of the original unit to the head of the original unit. The child support deduction is equal to the child support expenses.

```
if (orig_fscsded > 0 .and. &  
    fsun(orig_fsuhead) == iunit) fscspded(iunit) = orig_fscsded
```

For a policy change simulation, we assign child support expenses to the simulated SNAP unit that contains the head of the original unit. If the head of the original unit does not belong to any of the newly simulated units, then the child support expenses are not used.

Homeless Deduction. The QC Minimodel assigns the homeless deduction attributed to the original unit to all simulated SNAP units within the household.

```
if (l_homeded%ihhld == 3) then  
    fshomeDED(IUNIT) = l_homelsded%ihhld  
end if
```

h. Select Participants

i. Purpose

After eligibility is determined for a SNAP unit in the household, the model must simulate whether or not the unit decides to participate. In the QC Minimodel, we simulate all SNAP-eligible units on the file as participants because every household on the file did in reality participate in SNAP. We believe that this all-eligible-units-participate rule is reasonable in most cases. On the other hand, if a large reduction in SNAP benefits is simulated, the user may want to make some out-of-model adjustments to account for eligible SNAP units that may not continue to participate. If an eligible unit is simulated to have a zero benefit under a policy change simulation, the unit is treated as ineligible in the simulation results.

ii. Specification

```
do iunit = 1, ctprrh
  fspart(iunit) = 0
  if (fsun (iunit) /= iunit) cycle      ! not the SNAP unit head
  if (fsben(iunit) > 0) fspart(iunit) = 1 ! all eligible units participate
end do
```

We describe in detail the FSBEN calculation in the FSBEN entry of the codebook (Chapter V). We describe MFIP and State SSI-CAP programs in Chapter III, and we list the MFIP parameters and SSI-CAP standard benefit and shelter amounts in Appendix F.

This page has been left blank for double-sided copying.

V. CODEBOOK FOR THE FY 2012 SNAP QC DATABASE

In this chapter, we describe the variables on the FY 2012 SNAP QC database, including an overview of the types of variables on the file and a list and detailed description of each variable.

A. Overview of Variables on the Quality Control File

For each variable in the FY 2012 SNAP QC database, the Codebook provides the name, origin, label, range of values, and a list of values or description. This section explains how to interpret and use that information.

1. Origin: Reported versus Constructed

The “Origin” column in the codebook indicates the source of each particular variable as either reported or constructed. Variables coded as “R” are those reported on the Quality Control Review Schedule input form and have been read directly from the raw datafile, although some editing may have taken place as noted in the variable description. Variables coded as “C” are constructed or recoded variables that are derived from reported variables and program parameters (such as the Thrifty Food Plan and the SNAP benefit reduction rate). Constructed variables are the best variables for analytical purposes because inconsistencies have been corrected.

The following variables are used in creating the tables in the *Characteristics of Supplemental Nutrition Assistance Program Households* report series and should be used to obtain consistent results:

| | |
|-----------|--------------------------|
| FSBEN | Unit SNAP benefit amount |
| FSUSIZE | Unit size |
| FSGRINC | Unit total income |
| FSNETINC | Unit net income |
| FSERNDDED | Unit earnings deduction |
| TPOV | Unit poverty percentage |

2. Missing Values

Table V.1 lists the missing value conventions used in the SNAP QC database.

Table V.1. Codes for Missing Data

| ASCII or Binary Data | SAS Data | |
|----------------------|----------|---|
| Numeric | Numeric | Description |
| -1 | . | Blank on source file |
| -2 | .A | Value out of range |
| -3 | .B | Coded by QC reviewer as unknown (field coded with all 9s) |
| -4 | .C | Pertains to constructed variables only; variable could not be constructed or calculated due to missing data |
| -5 | .D | For CERTMTH variable, indicates that unit is participating in months not certified |
| -6 | .E | For SSI-CAP and MFIP units, variables that are not relevant in the benefit determination |

3. Using the SNAP QC Database

The FY 2012 SNAP QC database is a SAS file with 50,027 observations from 12 sample months—October 2011 through September 2012 for all States, the District of Columbia, Guam, and the Virgin Islands. To conduct analyses for a specific calendar month, the user should select observations sampled in that month by using the year month (YRMONTH) variable. The year month variable is a six-digit code with the first four digits indicating the year and the last two digits indicating the month. For example, to conduct an analysis based on observations from January 2012, the user should select all observations with a YRMONTH code equal to “201201.”

After selecting the desired observations, the user must assign a weight to each observation so that the sample represents the national SNAP caseload. The weights, stored in the variable HWGT, are computed for each of the independent monthly samples and are based on actual program participation. When analyzing one specific calendar month, the user should use the YRMONTH code to select the correct observations and then use the HWGT variable. However, if the analysis is based on more than one month, and an average monthly estimate is desired, the user should divide HWGT by the number of months being analyzed. The FYWGT variable should be used for all full-year tabulations (FYWGT equals HWGT divided by 12 for all States).

The tables in the *Characteristics of Supplemental Nutrition Assistance Program Households* report series are based on the full-year sample. To create the tables, we select all observations for all months and weight the observations by FYWGT to reflect the national monthly average caseload during the fiscal year.

The SNAP QC database can be used to obtain person-level information along with unit-level data. An integer from 1 to 16, representing up to 16 people in a household, is attached to each person-level variable. For ease, users often place these variables in arrays and use indices to access the data. One of the key person-level variables is the affiliation code FSAFIL_i. An FSAFIL_i value of 1 indicates that the person participated in SNAP.

B. Codebook

This codebook lists and describes each variable in the FY 2012 SNAP QC database. The unit-level variables are listed first, followed by the person-level variables and then the detailed error findings variables, for a total of nine categories.

The unit-level variables are divided into the following six categories:

1. Unit quality control review administrative data
2. Unit demographics and sample weights
3. Unit countable income
4. Unit countable assets
5. Unit expenses and deductions
6. Unit benefits

The person-level variables are divided into two categories:

7. Person-level characteristics
8. Person-level income

One category covers detailed error findings variables:

9. Detailed error findings

The categories appear in the order shown above. The variables in each category are listed alphabetically. Two codebooks are presented, both sorted in the same order. The first codebook—the quick-reference codebook—lists only the variable name, its origin, and a brief description. The second codebook—the detailed codebook—lists the variable name, its origin, and a description that includes all the valid values of the variable for discrete variables and the range of valid values for continuous variables (such as HWGT).

Unit QC Review Administrative Data

| | | |
|--------------|---|--|
| ACTNTYPE | R | Type of action |
| ALLADJ | R | Allotment adjustment |
| AMTADJ | R | Amount of allotment adjustment |
| AUTHREP | R | Authorized representative |
| CASE | R | Case classification |
| CAT_ELIG | C | Indicator of categorical eligibility status |
| CERTMTH | R | Months in certification period |
| COUPFIX | C | Coupon allotment adjusted for errors |
| EXPEDSER | R | Received expedited service |
| HHLNO | C | SNAP household identification number |
| LASTCERT | C | Months since last SNAP certification |
| LOCALCOD | R | Local agency code |
| MED_DED_DEMO | C | Indicator of medical deduction demonstration participation |
| MN_FIP | C | Indicator of MFIP participation |
| PURE_PA | C | Indicator of pure cash public assistance status |
| RCNTACTN | R | Most recent action on case |
| REP_SYS | R | Reporting requirement |
| REVNUM | R | State QC review number |
| SSI_CAP | C | Indicator of SSI-CAP participation |
| STATUS | R | Status of case error findings |
| YRMONTH | R | Sample year and month |

Unit Demographics and Sample Weights

| | | |
|-------------|---|---|
| CERTHHSZ | R | Certified unit size |
| COMPOSITION | C | Unit composition |
| COUNTYCD | C | FIPS code for county |
| CTPRHH | C | Number of people in household |
| FSDIS | C | Indicator of presence of disabled person in unit |
| FSNDISCA | C | Number of nondisabled adults age 18-49 in childless units |
| FSNELDER | C | Number of elderly individuals in unit |
| FSNGMOM | C | Indicator of single-female-headed unit |
| FSNK0T4 | C | Number of preschool-age children in unit |
| FSNK5T17 | C | Number of school-age children in unit |
| FSNKID | C | Number of children in unit |
| FSNONCIT | C | Number of noncitizens in unit |
| FSUSIZE | C | Constructed certified unit size |
| FYWGT | C | Weight used for full-year calculations |
| HWGT | C | Monthly sample weight |
| NONCIT_HEAD | C | Unit head citizenship indicator |
| RAWHSIZE | R | Reported number of people in household |
| REGION | C | Constructed census region code |
| REGIONCD | R | FNS region code |

*R indicates the variable is from the raw data; C indicates the variable was constructed.

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Quick-Reference Codebook</i> |
|-----------------|---------------|------------------------------------|---------------------------------|
| STATE | R | FIPS code for State or territory | |
| STRATUM | R | Stratum identification | |
| TANF_IND | C | Indicator of TANF receipt for unit | |
| TPOV | C | Gross income/poverty level ratio | |
| URBRUR | C | Urban/rural indicator | |
| WRK_POOR | C | Indicator of working poor unit | |

Unit Countable Income (Monthly Dollar Amounts)

| | | |
|----------|---|---|
| FSCONT | C | Countable unit income from contributions |
| FSCSUPRT | C | Countable unit child support payment income |
| FSDEEM | C | Countable unit deemed income |
| FSDIVER | C | Countable unit State diversion payments |
| FSEARN | C | Countable unit earned income |
| FSEDLOAN | C | Countable unit income from educational grants and loans |
| FSEITC | C | Countable unit income from earned income tax credit |
| FSENERGY | C | Countable unit energy assistance income |
| FSGA | C | Countable unit general assistance benefits |
| FSGRINC | C | Final gross countable unit income |
| FSNETINC | C | Final net countable unit income |
| FSOTHERN | C | Countable unit other earned income |
| FSOTHGOV | C | Countable unit income from other government benefits |
| FSOTHUN | C | Countable unit other unearned income |
| FSSLFEMP | C | Countable unit self-employment income |
| FSSOCSEC | C | Countable unit Social Security income |
| FSSSI | C | Countable unit SSI benefits |
| FSTANF | C | Countable unit TANF payments |
| FSUNEARN | C | Countable unit unearned income |
| FSUNEMP | C | Countable unit unemployment compensation benefits |
| FSVET | C | Countable unit veterans' benefits |
| FSWAGES | C | Countable unit wages and salaries |
| FSWCOMP | C | Countable unit workers' compensation benefits |
| FSWGESUP | C | Countable unit wage supplementation income |
| RAWGROSS | R | Reported gross countable unit income |
| RAWNET | R | Reported net countable unit income |

Unit Countable and Reported Assets

| | | |
|----------|---|---|
| FSASSET | C | Total countable assets under state rules |
| FSVEHAST | C | Countable nonexcluded vehicles' value under State rules |
| LIQRESOR | C | Countable liquid assets under State rules |
| OTHNLRES | C | Countable other nonliquid assets under State rules |
| RAWLQRES | R | Reported liquid assets |
| RAWOTRES | R | Reported other nonliquid assets |
| RAWRPROP | R | Reported real property |
| RAWVHAST | R | Reported nonexcluded vehicles' value |
| REALPROP | C | Countable real property under State rules |

Person-Level Characteristics: i = 1 to 16

| | | |
|---------------------|---|--|
| ABWDST _i | R | ABAWD status |
| AGE _i | R | Age |
| CTZN _i | R | Citizenship status |
| DIS _i | C | Person-level disability indicator |
| DPCOST _i | R | Reported dependent care cost |
| EMPRG _i | R | SNAP employment and training program status |
| EMPSTA _i | R | Employment status – type |
| EMPSTB _i | R | Employment status – amount |
| FSAFIL _i | R | SNAP case affiliation |
| FSUN _i | C | Position of head of SNAP unit |
| NDISCA _i | C | Nondisabled adult age 18-49 in childless unit status |
| RACETH _i | R | Race/ethnicity |
| REL _i | R | Relationship to head of household |
| SEX _i | R | Sex |
| WRKREG _i | R | Work registration status |
| YRSED _i | R | Highest educational level completed |

Person-Level Countable Income (Monthly Dollar Amounts): i = 1 to 16

| | | |
|---------------------|---|--|
| CONT _i | R | Countable income from contributions |
| CSUPRT _i | R | Countable child support payment income |
| DEEM _i | R | Countable deemed income |
| DIVER _i | R | Countable State diversion payments |
| EDLOAN _i | R | Countable income from educational grants and loans |
| EITC _i | R | Countable income from earned income tax credit |
| ENERGY _i | R | Countable energy assistance income |
| GAI _i | R | Countable general assistance benefits |
| OTHERN _i | R | Countable other earned income |
| OTHGOV _i | R | Countable income from other government benefits |
| OTHUN _i | R | Countable other unearned income |
| SLFEMP _i | R | Countable self-employment income |
| SOCSEC _i | R | Countable Social Security income |
| SSI _i | R | Countable SSI benefits |
| TANF _i | R | Countable TANF payments |
| UNEMP _i | R | Countable unemployment compensation benefits |
| VET _i | R | Countable veterans' benefits |
| WAGES _i | R | Countable wages and salaries |
| WCOMP _i | R | Countable workers' compensation benefits |
| WGESUP _i | R | Countable wage supplementation income |

VARIABLE ORIGIN DESCRIPTION

Quick-Reference Codebook

Detailed Error Findings: i = 1 to 9

| | | |
|----------------------|---|---------------------------------|
| AGENCY _i | R | Agency or client responsibility |
| AMOUNT _i | R | Variance dollar amount |
| DISCOV _i | R | Variance discovery |
| E_FINDG _i | R | Error finding |
| ELEMENT _i | R | Variance element |
| NATURE _i | R | Nature of variance |
| OCCDATE _i | R | Variance occurrence date |
| TIMEPER _i | R | Variance time period |
| VERIF _i | R | Variance verification |

VARIABLE ORIGIN DESCRIPTION

*Detailed Codebook
Unit QC Review Administrative Data*

Unit QC Review Administrative Data

| | | |
|----------|---|--|
| ACTNTYPE | R | TYPE OF ACTION Range = (1, 2) 1 = Certification 2 = Recertification |
| ALLADJ | R | ALLOTMENT ADJUSTMENT Range = (1, 3) 1 = No adjustment 2 = Prorated benefit 3 = Other adjustment |
| AMTADJ | R | AMOUNT OF ALLOTMENT ADJUSTMENT Range = (0, 9999) |
| AUTHREP | R | AUTHORIZED REPRESENTATIVE Range = (1, 2) 1 = Used to make application 2 = Not used to make application |
| CASE | R | CASE CLASSIFICATION Range = (1, 3) 1 = Included in error rate calculation 2 = Excluded from error rate calculation – processed by SSA worker 3 = Excluded from error rate calculation, as designated by FNS (e.g., demo project, simplified SNAP) |
| CAT_ELIG | C | INDICATOR OF CATEGORICAL ELIGIBILITY STATUS Range = (0, 2) 0 = Unit not categorically eligible for benefits 1 = Unit reported as categorically eligible for benefits and therefore not subject to SNAP income or asset tests (unit subject to State-determined income and/or asset limit on cash Public Assistance (PA) or noncash TANF-funded benefit used to confer categorical eligibility) 2 = Unit recoded to be categorically eligible after being identified as pure cash PA or as meeting State-specified criteria for broad-based categorical eligibility and therefore not subject to SNAP income or asset tests |
| CERTMTH | R | MONTHS IN CERTIFICATION PERIOD Range = (0, 85) Number of months SNAP unit was certified to participate during current certification or recertification |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit QC Review Administrative Data</i> |
|-----------------|---------------|---|---|
| COUPFIX | C | COUPON ALLOTMENT ADJUSTED FOR ERRORS Range = (1, 2701) | |
| EXPEDSER | R | RECEIVED EXPEDITED SERVICE Range = (1, 3) 1 = Entitled to expedited service and received benefits within federal time frame 2 = Entitled to expedited service but did not receive benefits within federal time frame 3 = Not entitled to expedited service | |
| HHLDNO | C | SNAP HOUSEHOLD IDENTIFICATION NUMBER Range = (1, 56746) Position of unit in unedited SNAP QC file (unique unit identifier) | |
| LASTCERT | C | MONTHS SINCE LAST SNAP CERTIFICATION Range = (0, 81) | |
| LOCALCOD | R | LOCAL AGENCY CODE Range = (0, 965) Designates local agency and allows grouping of data by county or county equivalent (may be FIPS code or alternative classification) | |
| MED_DED_DEMO | C | INDICATOR OF MEDICAL DEDUCTION DEMONSTRATION PARTICIPATION Range = (0, 1) 0 = No 1 = Yes | |
| MN_FIP | C | INDICATOR OF MFIP PARTICIPATION We recommend using MFIP with the understanding that it may slightly undercount the number of MFIP units. We caution against using MFIP units' TANF income. See Appendix A for details. Range = (0, 1) 0 = No 1 = Yes | |
| PURE_PA | C | INDICATOR OF PURE CASH PUBLIC ASSISTANCE STATUS Range = (0, 1) 0 = No 1 = Yes A unit is pure cash public assistance (pure PA) when everyone in the unit receives TANF, GA, or SSI or unit has TANF income and every adult receives TANF, GA, or SSI | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit QC Review Administrative Data</i> |
|-----------------|---------------|--|---|
| RCNTACTN | R | MOST RECENT ACTION ON CASE Range = (20010401, 20120928) Date the case was certified or recertified for participation in sample month under review (in yyyyymmdd format) | |
| REP_SYS | R | REPORTING REQUIREMENT Range = (1, 10) 1 = \$25 change reporting 2 = \$80 change in earned income 3 = \$100 change in earned income 4 = Status reporting 5 = 5-hour change in hours worked and expected to continue over a month 6 = Simplified reporting (exceeding 130 percent of income poverty guidelines) 7 = Quarterly reporting 8 = Monthly reporting 9 = Transitional benefits (no reporting requirement) 10 = Other | |
| REVNUM | R | STATE QC REVIEW NUMBER Range = (1, 900261) | |
| SSI_CAP | C | INDICATOR OF SSI-CAP PARTICIPATION The SNAP QC datafile may underestimate the actual number of SSI-CAP units in some States. See Appendix A for details. Range = (0, 3) 0 = Not in SSI-CAP 1 = SSI-CAP case with standard shelter expenses 2 = SSI-CAP case with standard benefit, consistent with program rules 3 = SSI-CAP case with standard benefit, inconsistent with program rules | |
| STATUS | R | STATUS OF CASE ERROR FINDINGS Range = (1, 3) Before FY 2012, STATUS=1 if the error amount was \$25 or less. Starting in FY 2012, STATUS=1 only if the error amount was \$0. 1 = Amount correct 2 = Overissuance 3 = Underissuance | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit QC Review Administrative Data</i> |
|-----------------|---------------|---|---|
| YRMONTH | R | <p>SAMPLE YEAR AND MONTH</p> <p>Range = (201110, 201209)</p> <p>Allows user to select one or more sample months from full-year file for analyses. The YRMONTH variable is a six-digit code; the first four digits indicate the sample year and the last two indicate the month. To select observations from January 2012, for example, YRMONTH should equal 201201.</p> | |

Unit Demographics and Sample Weights

| | | | |
|-------------|---|---|--|
| CERTHHSZ | R | CERTIFIED UNIT SIZE Range = (1, 17) | |
| COMPOSITION | C | UNIT COMPOSITION Range = (0, 5) 0 = No children 1 = Child(ren) only 2 = Child(ren) and one male adult 3 = Child(ren) and one female adult 4 = Child(ren) and married unit head (spouse may be nonparticipating; includes married teens) 5 = Child(ren) with other multiple adults | |
| COUNTYCD | C | FIPS CODE FOR COUNTY Range = (1, 840) | |
| CTPRHH | C | NUMBER OF PEOPLE IN HOUSEHOLD Range = (1, 16) Number of people in household with nonmissing person-level information | |
| FSDIS | C | INDICATOR OF PRESENCE OF DISABLED PERSON IN UNIT We recommend using this variable with caution and the understanding that it likely undercounts the number of units with a disabled person. See Appendix A for details. Range = (0, 1) 0 = No 1 = Yes Defined as a unit with (1) nonelderly SSI recipients, (2) a medical expense deduction and no elderly individuals, or (3) nonelderly individuals who work fewer than 30 hours per week, are coded as being exempt from work registration due to disability, and are receiving Social Security, veterans' benefits, or workers' compensation. | |
| FSNDISCA | C | NUMBER OF NONDISABLED ADULTS AGE 18-49 IN CHILDLESS UNITS We recommend using FSNDISCA with the understanding that we are limited in our ability to identify disabled individuals in the SNAP QC file. See Appendix A for details. Range = (0, 6) Number of nondisabled adults age 18 to 49 in childless SNAP units | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Demographics and Sample Weights</i> |
|-----------------|---------------|---|---|
| FSNELDER | C | NUMBER OF ELDERLY INDIVIDUALS IN UNIT Range = (0, 2) Number of people age 60 or older in SNAP unit | |
| FSNGMOM | C | INDICATOR OF SINGLE-FEMALE-HEADED UNIT Range = (0, 1) 0 = No 1 = Yes A SNAP unit with one adult and one or more children; the adult is female. | |
| FSNK0T4 | C | NUMBER OF PRESCHOOL-AGE CHILDREN IN UNIT Range = (0, 5) Number of children under age 5 in SNAP unit | |
| FSNK5T17 | C | NUMBER OF SCHOOL-AGE CHILDREN IN UNIT Range = (0, 10) Number of children age 5 to 17 in SNAP unit | |
| FSNKID | C | NUMBER OF CHILDREN IN UNIT Range = (0, 12) Number of children under age 18 in SNAP unit | |
| FSNONCIT | C | NUMBER OF NONCITIZENS IN UNIT Range = (0, 10) Number of people with FSAFIL _i = 1 and CTZNI ≥ 3 | |
| FSUSIZE | C | CONSTRUCTED CERTIFIED UNIT SIZE Range = (1, 16) Number of people with FSAFIL _i = 1 | |
| FYWGT | C | WEIGHT USED FOR FULL-YEAR CALCULATIONS Range = (3.175, 4811.62) Calculated as HWGT/12 for all States | |
| HWGT | C | MONTHLY SAMPLE WEIGHT Range = (38.10, 57739.45) Allows user to replicate total monthly caseloads as reflected in SNAP Program Operations data. If the analysis's reference period is longer than one calendar month, the weight field must be divided by the number of months being analyzed to calculate an average monthly value for that reference period. | |
| NONCIT_HEAD | C | UNIT HEAD CITIZENSHIP INDICATOR Range = (0, 2) 0 = Head of unit is a citizen | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Demographics and Sample Weights</i> |
|-----------------|---------------|---|---|
| | | | 1 = Head of unit is a participating noncitizen 2 = Head of unit is a nonparticipating noncitizen |
| RAWHSIZE | R | REPORTED NUMBER OF PEOPLE IN HOUSEHOLD Range = (1, 16) | |
| REGION | C | CONSTRUCTED CENSUS REGION CODE Range = (1, 4) 1 = Northeast 2 = Midwest 3 = South 4 = West See Appendix E for a list of States in each region. | |
| REGIONCD | R | FNS REGION CODE Range = (1, 7) 1 = Northeast 2 = Mid-Atlantic 3 = Southeast 4 = Midwest 5 = Southwest 6 = Mountain Plains 7 = West See Appendix E for a list of States in each region. | |
| STATE | R | FIPS CODE FOR STATE OR TERRITORY Range = (1, 78) See Appendix E for FIPS code list. | |
| STRATUM | R | STRATUM IDENTIFICATION Range = (0, 42) Codes for distinct parts of States with stratified samples; codes in States that are not stratified are recoded to 0. | |
| TANF_IND | C | INDICATOR OF TANF RECEIPT FOR UNIT Range = (0, 1) 0 = No 1 = Yes TANF_IND = 1 if FSTANF >0 or MN_FIP = 1 | |
| TPOV | C | GROSS INCOME/POVERTY LEVEL RATIO Range = (0, 681) TPOV = FSGRINC/NETSCRN*100, rounded to nearest integer. If FSGRINC = 0, then TPOV = 0. Otherwise if TPOV rounds to 0, TPOV is set to 1. | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Demographics and Sample Weights</i> |
|-----------------|---------------|---|---|
| URBRUR | C | <p>URBAN/RURAL INDICATOR</p> <p>We recommend caution when using this variable for all State-level tabulations, and recommend against using this variable for State-level tabulations in Alabama, Nebraska, New Mexico, Utah, Washington, and Wisconsin. See Appendix A for details.</p> <p>Range = (1, 3)</p> <p>Location of agency at which unit's SNAP application was processed.</p> <p>1 = Metropolitan (at least one urbanized area of 50,000 or more population and adjacent territory with a high degree of social and economic integration with the core as measured by commuting ties)</p> <p>2 = Micropolitan (at least one urban cluster of at least 10,000 but less than 50,000 population and adjacent territory with a high degree of social and economic integration with the core as measured by commuting ties)</p> <p>3 = Rural (not metropolitan or micropolitan)</p> | |
| WRK_POOR | C | <p>INDICATOR OF WORKING POOR UNIT</p> <p>Range = (0, 1)</p> <p>0 = No</p> <p>1 = Yes</p> <p>All SNAP units with countable earnings (FSEARN) or multiple indicators of earnings in the unedited SNAP QC file.</p> | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Countable Income</i> |
|---|---------------|---|--|
| Unit Countable Income (Monthly Dollar Amounts) | | | |
| FSCONT | C | COUNTABLE UNIT INCOME FROM CONTRIBUTIONS Range = (0, 2359) Sum of CONT1 through CONT16 | |
| FSCSUPRT | C | COUNTABLE UNIT CHILD SUPPORT PAYMENT INCOME Range = (0, 2095) Sum of CSUPRT1 through CSUPRT16 | |
| FSDEEM | C | COUNTABLE UNIT DEEMED INCOME Range = (0, 5515) Sum of DEEM1 through DEEM16 | |
| FSDIVER | C | COUNTABLE UNIT STATE DIVERSION PAYMENTS Range = (0, 498) Sum of DIVER1 through DIVER16 | |
| FSEARN | C | COUNTABLE UNIT EARNED INCOME Range = (0, 6186) Sum of FSWAGES, FSSLFEMP, and FSOTHERN | |
| FSEDLOAN | C | COUNTABLE UNIT INCOME FROM EDUCATIONAL GRANTS AND LOANS Range = (0, 1138) Sum of EDLOAN1 through EDLOAN16 | |
| FSEITC | C | COUNTABLE UNIT INCOME FROM EARNED INCOME TAX CREDIT Range = (0, 797) Sum of EITC1 through EITC16 | |
| FSEENERGY | C | COUNTABLE UNIT ENERGY ASSISTANCE INCOME Range = (0, 1071) Sum of ENERGY1 through ENERGY16 | |
| FSGA | C | COUNTABLE UNIT GENERAL ASSISTANCE BENEFITS Range = (0, 1617) Sum of GA1 through GA16 | |
| FSGRINC | C | FINAL GROSS COUNTABLE UNIT INCOME Range = (0, 8059) Total monthly gross income of unit (sum of FSEARN and FSUNEARN) | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Countable Income</i> |
|-----------------|---------------|---|--|
| FSNETINC | C | FINAL NET COUNTABLE UNIT INCOME Range = (0, 7763) Total monthly income of unit after applying deductions. Calculated as FSGRINC-FSTOTDED but not less than 0. Coded as missing for MFIP units and for SSI-CAP units in States with standard SSI-CAP benefits. | |
| FSOTHERN | C | COUNTABLE UNIT OTHER EARNED INCOME Range = (0, 2235) Sum of OTHERN1 through OTHERN16 | |
| FSOTHGOV | C | COUNTABLE UNIT INCOME FROM OTHER GOVERNMENT BENEFITS Range = (0, 2610) Sum of OTHGOV1 through OTHGOV16 | |
| FSOTHUN | C | COUNTABLE UNIT OTHER UNEARNED INCOME Range = (0, 8059) Sum of OTHUN1 through OTHUN16 | |
| FSSLFEMP | C | COUNTABLE UNIT SELF-EMPLOYMENT INCOME Range = (0, 4162) Sum of SLFEMP1 through SLFEMP16 | |
| FSSOCSEC | C | COUNTABLE UNIT SOCIAL SECURITY INCOME Range = (0, 3089) Sum of SOCSEC1 through SOCSEC16 | |
| FSSSI | C | COUNTABLE UNIT SSI BENEFITS Range = (0, 3490) Sum of SSI1 through SSI16 | |
| FSTANF | C | COUNTABLE UNIT TANF PAYMENTS Range = (0, 1703) Sum of TANF1 through TANF16 | |
| FSUNEARN | C | COUNTABLE UNIT UNEARNED INCOME Range = (0, 8059) Sum of FSCONT, FSCSUPRT, FSDEEM, FSEDLOAN, FSGA, FSOTHGOV, FSOTHUN, FSSOCSC, FSSSI, FSTANF, FSUNEMP, FSVET, FSWCOMP, FSDIVER, FSENERGY, and FSWGESUP | |
| FSUNEMP | C | COUNTABLE UNIT UNEMPLOYMENT COMPENSATION BENEFITS Range = (0, 2631) Sum of UNEMP1 through UNEMP16 | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Countable Income</i> |
|-----------------|---------------|--|--|
| FSVET | C | COUNTABLE UNIT VETERANS' BENEFITS Range = (0, 2171) Sum of VET1 through VET16 | |
| FSWAGES | C | COUNTABLE UNIT WAGES AND SALARIES Range = (0, 6186) Sum of WAGES1 through WAGES16 | |
| FSWCOMP | C | COUNTABLE UNIT WORKERS' COMPENSATION BENEFITS Range = (0, 2376) Sum of WCOMP1 through WCOMP16 | |
| FSWGESUP | C | COUNTABLE UNIT WAGE SUPPLEMENTATION INCOME Range = (0, 969) Sum of WGESUP1 through WGESUP16 | |
| RAWGROSS | R | REPORTED GROSS COUNTABLE UNIT INCOME Range = (0, 8059) Reported total monthly countable income of unit before applying deductions (see FSGRINC for final value) | |
| RAWNET | R | REPORTED NET COUNTABLE UNIT INCOME Range = (0, 4802) Reported total monthly countable income of unit after applying deductions (see FSNETINC for final value) | |

| REALPROP | C | COUNTABLE REAL PROPERTY UNDER STATE RULES Range = (0, 3155) Does not include home |

VARIABLE

ORIGIN

DESCRIPTION

*Detailed Codebook
Unit Countable Assets*

VEHICLEA

R

REPORTED CATEGORY FOR FIRST VEHICLE
We recommend against using VEHICLEA. See Appendix A for more details.

Range = (1, 8)

1 = No vehicle

2 = Vehicle exempt because used for producing income, as a home, to transport a physically disabled member, for long-distance travel (other than commuting), or to carry fuel or water

3 = Vehicle exempt because inaccessible resource (equity value \$1,500 or less)

4 = Vehicle exempt due to categorical eligibility

5 = Vehicle excluded under State TANF standard (vehicle of non-categorically eligible unit members only)

6 = Vehicle registered and attributable to an adult unit member or used by a person under age 18 for employment or education (subject to fair market value only)

7 = Vehicle not registered (equity test only)

8 = Vehicle not excluded and not included in code 6 (subject to fair market value or equity test, whichever is greater)

VEHICLEB

R

REPORTED CATEGORY FOR SECOND VEHICLE
We recommend against using VEHICLEB. See Appendix A for more details.

Range = (1, 8)

1 = No vehicle

2 = Vehicle exempt because used for producing income, as a home, to transport a physically disabled member, for long-distance travel (other than commuting), or to carry fuel or water

3 = Vehicle exempt because inaccessible resource (equity value \$1,500 or less)

4 = Vehicle exempt due to categorical eligibility

5 = Vehicle excluded under State TANF standard (vehicle of non-categorically eligible unit members only)

6 = Vehicle registered and attributable to an adult unit member or used by a person under age 18 for employment or education (subject to fair market value only)

7 = Vehicle not registered (equity test only)

8 = Vehicle not excluded and not included in code 6 (subject to fair market value or equity test, whichever is greater)

VARIABLE ORIGIN DESCRIPTION

*Detailed Codebook
Unit Expenses and Deductions*

Unit Expenses and Deductions

| | | |
|-----------------|---|---|
| ERN_INC_DED_PCT | C | PERCENTAGE USED TO CALCULATE EARNINGS DEDUCTION Range = (0.20, 0.38) 0.38 is used for MFIP participants; 0.2 for all others |
| EXCL_FSCSDED | C | CHILD SUPPORT EXCLUDED FROM GROSS INCOME Range = (0, 787) Child support expenses excluded before gross income test rather than before net income test for eligibility |
| FSCSDED | C | CHILD SUPPORT EXPENSE DEDUCTION Range = (0, 2290) Coded as missing for MFIP units and for units participating in an SSI-CAP program in States using standard SSI-CAP benefits |
| FSCSEXP | R | REPORTED CHILD SUPPORT EXPENSE DEDUCTION Range = (0, 4050) (Some States treat child support payments to non-unit members as an income exclusion rather than a deduction. See EXCL_FSCSDED and FSCSDED for final values.) |
| FSDEPDED | R | REPORTED DEPENDENT CARE DEDUCTION We recommend against using this variable for State-level tabulations. See Appendix A for more details. Range = (0, 1388) Some values have been edited to obtain consistency with DPCOST1 to DPCOST16 and to improve the final benefit calculation. See Appendix B for details. Coded as missing for all MFIP and SSI-CAP units. |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Expenses and Deductions</i> |
|-----------------|---------------|--|---|
| FSDEPDE2 | C | MARGINAL EFFECTIVENESS OF DEPENDENT CARE DEDUCTION ³¹ Range = (0, 1789) Calculated as $FSDEPDE2 = NEWNET - FSNETINC$, where $NEWNET = \text{MAX}(0, FSGRINC - FSSLT3 - FSERNDED -$ $FSMEDDED - FSSTDDDED - FSCSDED -$ $HOMELESS_DED)$ and where FSSLT3 is the shelter deduction calculated without FSDEPDED. Coded as missing for all MFIP and SSI-CAP units. | |
| FSERNDED | C | CALCULATED EARNED INCOME DEDUCTION Range = (0, 1237) Calculated as $FSERNDED = ERN_INC_DED_PCT * FSEARN$, rounded to nearest integer. The deduction equals 38 percent of total earned income for MFIP participants and 20 percent of total earned income for all others. Coded as missing for all SSI-CAP units. | |
| FSERNDE2 | C | MARGINAL EFFECTIVENESS OF EARNED INCOME DEDUCTION Range = (0, 1237) Calculated as $FSERNDE2 = NEWNET - FSNETINC$, where $NEWNET = \text{MAX}(0, FSGRINC - FSSLT2 - FSDEPDED -$ $FSMEDDED - FSSTDDDED - FSCSDED -$ $HOMELESS_DED)$ and where FSSLT2 is the shelter deduction calculated without FSERNDED. Coded as missing for all MFIP and SSI-CAP units. | |
| FSMEDDED | C | CALCULATED MEDICAL DEDUCTION Range = (0, 3393) The deduction is for units with elderly or disabled members only; the entry for medical expenses should include only expenses in excess of \$35. Calculated as $FSMEDDED = \text{MAX}(0, FSMEDEXP)$ Coded as missing for all MFIP and SSI-CAP units. | |

³¹ The marginal effectiveness variables are calculated as the difference between the actual calculated net income and what the net income would have been without the deduction. Given that the combined value of deductions to which a unit is entitled sometimes exceeds the gross income received by the unit, the marginal effectiveness variables give a more accurate picture of the impact of the deductions.

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Expenses and Deductions</i> |
|-----------------|---------------|--|---|
| FSMEDDE2 | C | MARGINAL EFFECTIVENESS OF MEDICAL DEDUCTION Range = (0, 1543) Calculated as $FSMEDDE2 = NEWNET - FSNETINC$, where $NEWNET = \text{MAX}(0, FSGRINC - FSSLT4 - FSDEPDED - FSERNDED - FSSTDDED - FSCSDED - HOMELESS_DED)$ and where FSSLT4 is the shelter deduction calculated without FSMEDDED. Coded as missing for all MFIP and SSI-CAP units. | |
| FSMEDEXP | R | REPORTED MEDICAL EXPENSES Range = (0, 3393) Allowable medical expenses in excess of \$35 for elderly and disabled unit members | |
| FSSLTDED | C | CALCULATED EXCESS SHELTER DEDUCTION Range = (0, 2242) Set to 0 if HOMEDED = 3; otherwise set to XCOST for units with elderly or disabled and equal to the minimum of XCOST and SHELCAP for units without elderly or disabled, where $XCOST = \text{MAX}(0, FSSLTEXP - HALFNET)$ and $HALFNET = \text{MAX}(0, \text{ROUND}(FSGRINC - FSSTDDED - FSERNDED - FSDEPDED - FSMEDDED - FSCSDED) / 2)$ The final value of FSSLTDED is rounded to nearest integer. Coded as missing for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits. | |
| FSSLTDE2 | C | MARGINAL EFFECTIVENESS OF EXCESS SHELTER DEDUCTION Range = (0, 1798) Calculated as $FSSLTDE2 = NEWNET - FSNETINC$, where $NEWNET = \text{MAX}(0, FSGRINC - FSDEPDED - FSERNDED - FSMEDDED - FSSTDDED - FSCSDED - HOMELESS_DED)$. Coded as missing for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits. | |
| FSSLTEXP | C | CALCULATED SHELTER EXPENSES Range = (0, 5158) Sum of RENT and UTIL | |
| FSSTDDED | C | STANDARD DEDUCTION Range = (130, 416) Varies by region. See Appendix F for values. Coded as missing for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits. | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Expenses and Deductions</i> |
|-----------------|---------------|--|---|
| FSSTDDE2 | C | MARGINAL EFFECTIVENESS OF STANDARD DEDUCTION Range = (0, 624) Calculated as $FSSTDDE2 = NEWNET - FSNETINC$, where $NEWNET = \text{MAX}(0, FSGRINC - FSSLT1 - FSDEPDED - FSERNDED - FSMEDDED - FSCSDED - HOMELESS_DED)$ and where FSSLT1 is the shelter deduction calculated without FSSTDDED. Coded as missing for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits. | |
| FSTOTDED | C | TOTAL DEDUCTIONS Range = (0, 4176) Sum of FSSTDDED, FSERNDED, FSDEPDED, FSSLTDED, FSMEDDED, HOMELESS_DED, and FSCSDED Coded as missing for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits. | |
| FSTOTDE2 | C | MARGINAL EFFECTIVENESS OF TOTAL DEDUCTION Range = (0, 2639) Calculated as $FSGRINC - FSNETINC$. Coded as missing for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits. | |
| HOMEDED | R | INDICATOR OF HOMELESSNESS Range = (1, 3) 1 = Not homeless 2 = Homeless, not receiving homeless shelter allowance 3 = Homeless, receiving homeless shelter allowance | |
| HOMELESS_DED | C | AMOUNT OF HOMELESS DEDUCTION Range = (0, 143) Positive value only for those with HOMEDED = 3 Coded as missing for all MFIP and SSI-CAP units. | |
| RAWERND | R | REPORTED EARNED INCOME DEDUCTION Range = (0, 994) (See FSERNDED for final earned income deduction value.) | |
| RENT | R | RENT/MORTGAGE AMOUNT Range = (0, 4753) Some values for SSI-CAP units have been edited to apply standard shelter allowances. | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Expenses and Deductions</i> |
|-----------------|---------------|---|---|
| SHELCAP | C | MAXIMUM ALLOWABLE SHELTER EXPENSE DEDUCTION Range = (362, 734) SHELCAP varies by region. See Appendix F for values. | |
| SHELDED | R | REPORTED SHELTER DEDUCTION Range = (0, 24313) (See FSSLTDED for the final value) | |
| SUA1 | R | STANDARD UTILITY ALLOWANCE–USAGE AND ENTITLEMENT We recommend using this variable with the awareness that units in some States have two possible HCSUA values for the same unit type and time period. See Appendix A for more details. Range = (1, 9) 1 = No utilities and no LIHEAA assistance 2 = Uses actual expenses 3 = Uses higher standard based on LIHEAA assistance 4 = Uses higher standard and does not receive LIHEAA assistance 5 = Uses lower standard 6 = Uses telephone-only standard 7 = Uses individual standards 8 = Uses higher standard, LIHEAA assistance status unknown 9 = Other Some values have been edited to obtain consistency with UTIL. See Appendix B for more details. Coded as missing for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits. LIHEAA is the Low Income Home Energy Assistance Act of 1981. Some State programs may have another name, such as Home Energy Assistance Program (HEAP) Higher Standard is an SUA based upon payment of heating or cooling and includes all utilities. Lower Standard is an SUA based upon all utilities but is for households that do not incur heating or cooling or receive LIHEAA. | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Expenses and Deductions</i> |
|-----------------|---------------|--|---|
| SUA2 | R | STANDARD UTILITY ALLOWANCE-PRORATED We recommend using this variable with the awareness that units in some States have two possible HCSUA values for the same unit type and time period. See Appendix A for more details. Range = (1, 2) 1 = Not prorated 2 = Prorated Some values have been edited to obtain consistency with UTIL. See Appendix B for more details. Coded as missing for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits. | |
| UTIL | R | UTILITY AMOUNT Range = (0, 1082) Some values have been edited to improve the final benefit calculation. See Appendix B for more details. | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Benefits</i> |
|----------------------|---------------|---|---|
| Unit Benefits | | | |
| AMTERR | R | AMOUNT OF BENEFIT IN ERROR Range = (0, 802) | Dollar amount of any identified error, or the difference between the benefits the State authorized and the benefits the State should have authorized. Before FY 2012, only errors over \$25 were recorded. |
| ASSLIM | C | ASSET LIMIT Range = (2000, 5000) | SNAP eligibility limit. Categorically eligible units are not subject to an asset limit. See Appendix F for schedule. |
| BENMAX | C | MAXIMUM BENEFIT AMOUNT Range = (200, 2782) | The maximum possible benefit for a unit, which varies by unit size and region. See Appendix F for schedule. |
| FSASTEST | C | INDICATOR OF PASSING ASSET TEST Range = (0, 1) 0 = No 1 = Yes | |
| FSBEN | C | FINAL CALCULATED BENEFIT Range = (2, 2702) | Calculated as $FSBEN = \text{MAX}(FSMINBEN, BENMAX-ROUND(.3*FSNETINC))$ if $FSUSIZE$ is 2 or Less. Otherwise, $FSBEN = \text{MAX}(0, BENMAX-ROUND(.3*FSNETINC))$ for all units, except for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits where the benefit is calculated by using a State-specific formula. |
| FSGRTEST | C | INDICATOR OF PASSING GROSS INCOME TEST Range = (0, 1) 0 = No 1 = Yes | |
| FSMINBEN | C | RECEIVED MINIMUM BENEFIT Range = (0, 1) 0 = No 1 = Yes | $FSMINBEN = 1$ when $FSBEN = 8$ percent of the maximum one-person benefit for the unit's geographic region and $FSUSIZE = 1$ or 2. $FSMINBEN$ is always set to 0 for units |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Unit Benefits</i> |
|-----------------|---------------|---|--|
| | | | participating in an SSI-CAP program in States that use standard SSI-CAP benefits. |
| FSNETEST | C | INDICATOR OF PASSING NET INCOME TEST Range = (0, 1) 0 = No 1 = Yes | Coded as missing for MFIP units and for units participating in an SSI-CAP program in States that use standard SSI-CAP benefits. |
| GROSSCRN | C | GROSS INCOME SCREEN Range = (1180, 8207) | SNAP eligibility limit determined by unit size. Categorically eligible units and those with elderly or disabled members are not subject to gross income screen. See Appendix F for values. |
| NETSCRN | C | NET INCOME SCREEN Range = (908, 6316) | SNAP eligibility limit determined by unit size. Categorically eligible units are not subject to net income screen. See Appendix F for values. |
| RAWBEN | R | REPORTED SNAP BENEFIT RECEIVED Range = (0, 2701) | Reported amount of SNAP benefits that the unit was certified to receive during sample month (see FSBEN for final value) |

VARIABLE ORIGIN DESCRIPTION

Person-Level Characteristics*

Person-Level Characteristics

| | | |
|--------------------------------|----------|--|
| <p>ABWDST1 to ABWDST16</p> | <p>R</p> | <p>ABAWD STATUS</p> <p>We recommend caution when using the variable, and recommend combining values ABWDSTi = 2-7, unless the specific state policies in effect regarding ABAWDs are known. Additionally, we recommend against using ABWDSTi for state-level tabulations for Connecticut, Maryland, Rhode Island, Utah, Virgin Islands, and Wyoming. See Appendix A for more details.</p> <p>Range = (1, 7)</p> <p>Person 1 through Person 16</p> <p>1 = Not an able-bodied adult without dependents (ABAWD)</p> <p>2 = ABAWD in a waived area</p> <p>3 = Exempt based on 15 percent option</p> <p>4 = ABAWD meeting work requirements</p> <p>5 = ABAWD in 1st 3 months</p> <p>6 = ABAWD in 2nd 3 months</p> <p>7 = ABAWD who has exhausted time-limited benefits</p> |
| <p>AGE1 to AGE16</p> | <p>R</p> | <p>AGE</p> <p>Range = (0, 98)</p> <p>Person 1 through Person 16</p> <p>0 = Age less than 1 year</p> <p>1-97 = Age in years</p> <p>98 = Age 98 years or more</p> |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Person-Level Characteristics</i> |
|------------------------|---------------|---|---|
| CTZN1 to CTZN16 | R | CITIZENSHIP STATUS We recommend caution when using this variable for State-level tabulations. See Appendix A for more details. Range = (1, 10) Person 1 through Person 16 1 = U.S.-born citizen 2 = Naturalized citizen 3 = Legal permanent resident with 40 quarters of work, military service, five years legal U.S. residency, disability, or under age 18 5 = Person admitted as refugee, granted asylum, or given stay of deportation 6 = Other eligible noncitizen 7 = Noncitizen legally in United States who does not meet one of the above codes and is not receiving SNAP benefits but whose income and resources must be considered in determining benefits 8 = Other ineligible legal noncitizen (e.g., visitor, tourist, student, diplomat) 9 = Undocumented noncitizen 10 = Noncitizen, status unknown | |
| DIS1 to DIS16 | C | PERSON-LEVEL DISABILITY INDICATOR Because we are limited in our ability to assess the quality of the SSI and work registration variables that feed into our person-level disability algorithm, we recommend caution when using the new individual-level disability indicator (DISi). See Appendix A for more details. Range = (0, 1) Person 1 through Person 16 0 = Not disabled 1 = Disabled Nonelderly individuals identified as disabled using receipt of SSI or a combination of hours worked, work registration status, receipt of Social Security, veterans' benefits, or workers' compensation, and/or unit medical expense deduction. See Appendix B for details. | |
| DPCOST1 to DPCOST16 | R | REPORTED DEPENDENT CARE COST We recommend against using this variable for State-level tabulations. See Appendix A for more details. Range = (0, 1100) Person 1 through Person 16 Some values have been edited to obtain consistency with FSDEPDED. See Appendix B for details. | |

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Person-Level Characteristics</i> |
|------------------------|---------------|--|---|
| EMPRG1 to EMPRG16 | R | SNAP EMPLOYMENT AND TRAINING PROGRAM STATUS We recommend caution when using EMPRGi. See Appendix A for more details. Range = (0, 9) Person 1 through Person 16 0 = Not participating in E&T 1 = Participating in non-SNAP E&T (such as TANF) 2 = SNAP job search or job search training 3 = SNAP E&T workfare or work experience 4 = SNAP E&T work supplementation 5 = SNAP E&T education leading to high school diploma or GED 6 = SNAP E&T postsecondary education leading to degree or certificate 7 = SNAP E&T remedial education (including adult education and English lessons not leading to degree) 8 = SNAP E&T vocational training 9 = Other | |
| EMPSTA1 to EMPSTA16 | R | EMPLOYMENT STATUS-TYPE Range = (1, 8) Person 1 through Person 16 We recommend caution when using EMPSTAi. See Appendix A for more details. 1 = Not in labor force and not looking for work 2 = Unemployed and looking for work 3 = Active-duty military 4 = Migrant farm labor 5 = Nonmigrant farm labor 6 = Self-employed, farming 7 = Self-employed, nonfarming 8 = Employed by other | |
| EMPSTB1 to EMPSTB16 | R | EMPLOYMENT STATUS-AMOUNT Range = (1, 5) Person 1 through Person 16 We recommend caution when using EMPSTBi. See Appendix A for more details. 1 = Not employed 2 = 1-19 hours/week 3 = 20-29 hours/week 4 = 30-39 hours/week 5 = Full-time (40 hours or more) | |

VARIABLE**ORIGIN****DESCRIPTION***Detailed Codebook
Person-Level Characteristics*FSAFIL1 to
FSAFIL16

R

SNAP CASE AFFILIATION

Range = (1, 99)

Person 1 through Person 16

We recommend against using this variable for State-level tabulations of nonparticipants in Minnesota, West Virginia, and Wisconsin, and caution when using it for tabulations of nonparticipants in other States. See Appendix A for more details.

- 1 = Eligible member of SNAP case under review and entitled to receive benefits
- 2 = Eligible SNAP participant in another unit, not currently under review (code added by Mathematica for use in certain SNAP-CAP units)
- 4 = Member is ineligible noncitizen and not participating in State-funded SNAP
- 5 = Member not paying/cooperating with child support agency
- 6 = Member is ineligible striker
- 7 = Member is ineligible student
- 8 = Member disqualified for program violation
- 9 = Member ineligible to participate due to disqualification for failure to meet work requirements (work registration, E&T, acceptance of employment, employment status/job availability, voluntary quit/reducing work effort, workfare/comparable workfare)
- 10 = ABAWD time limit exhausted and ABAWD ineligible to participate due to failure to meet ABAWD work requirements, to work at least 20 hours per week, to participate in at least 20 hours per week in qualifying educational training activities, or to participate in workfare
- 11 = Fleeing felon or parole and probation violator
- 13 = Convicted drug felon
- 14 = Social Security Number disqualified
- 15 = SSI recipient in California
- 16 = Prisoner in detention center
- 17 = Foster care
- 18 = Member is ineligible noncitizen and participating in State-funded SNAP
- 19 = Ineligible noncitizen, originally coded as participant (code added by Mathematica)
- 20 = Ineligible ABAWD, originally coded as participant (code added by Mathematica)
- 99 = Unknown

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Person-Level Characteristics</i> |
|------------------------|---------------|--|--|
| FSUN1 to FSUN16 | C | POSITION OF HEAD OF SNAP UNIT Range = (0, 9) Person 1 through Person 16 | Identifies the index position of the head of the SNAP unit. The head is defined as the first person in unit with REL _i = 1 or, if no one in unit has REL _i = 1, as the first adult in unit. If there are no adults in unit, the oldest child is the head. FSUN _i is the same for everyone in unit. For example, if unit head is the second person in the household, FSUN _i = 2 for everyone in unit. FSUN _i = 0 for any individuals in household who are not part of the SNAP unit. |
| NDISCA1 to NDISCA16 | C | NONDISABLED ADULT AGE 18-49 IN CHILDLESS UNIT STATUS We recommend using NDISCA_i with the understanding that we are limited in our ability to identify disabled individuals in the SNAP QC file. See Appendix A for details. Range = (0, 2) Person 1 through Person 16 0 = Not in universe (AGE _i <18 or AGE _i >49) 1 = Nondisabled adult age 18-49 in childless unit 2 = Age 18-49, but not nondisabled adult in childless unit | |

VARIABLE**ORIGIN****DESCRIPTION***Detailed Codebook
Person-Level Characteristics*RACETH1 to
RACETH16

R

RACE/ETHNICITY

Range = (1, 22)

Person 1 through Person 16

We recommend against using RACETHi. See Appendix A for more details.

1 = Racial/ethnic data not available because application was not found

2 = Not recorded on application

Not Hispanic or Latino

3 = American Indian or Alaska Native

4 = Asian

5 = Black or African American

6 = Native Hawaiian or other Pacific Islander

7 = White

Multiple Races Reported

8 = (American Indian or Alaska Native) and white

9 = Asian and white

10 = (Black or African American) and white

11 = (American Indian or Alaska Native) and (black or African American)

12 = Respondent reported more than one race and does not fit into above categories (codes 8 through 11)

Hispanic or Latino

13 = (Hispanic or Latino) and (American Indian or Alaska Native)

14 = (Hispanic or Latino) and Asian

15 = (Hispanic or Latino) and (black or African American)

16 = (Hispanic or Latino) and (Native Hawaiian or other Pacific Islander)

17 = (Hispanic or Latino) and white

Multiple Races Reported

18 = (Hispanic or Latino) and (American Indian or Alaska Native) and white

19 = (Hispanic or Latino) and Asian and white

20 = (Hispanic or Latino) and (black or African American) and white

21 = (Hispanic or Latino) and (American Indian or Alaska Native) and (black or African American)

22 = (Hispanic or Latino) and respondent reported more than one race and does not fit into above categories (codes 18 through 21)

| <u>VARIABLE</u> | <u>ORIGIN</u> | <u>DESCRIPTION</u> | <i>Detailed Codebook Person-Level Characteristics</i> |
|------------------------|---------------|--|---|
| REL1 to REL16 | R | RELATIONSHIP TO HEAD OF HOUSEHOLD Range = (1, 7) Person 1 through Person 16 1 = Head of household 2 = Spouse 3 = Parent 4 = Daughter, stepdaughter, son, or stepson 5 = Other related person (brother, sister, niece, nephew, grandchild, great-grandchild, cousin) 6 = Foster child 7 = Unrelated person | |
| SEX1 to SEX16 | R | SEX Range = (1, 2) Person 1 through Person 16 1 = Male 2 = Female | |
| WRKREG1 to WRKREG16 | R | WORK REGISTRATION STATUS Range = (1, 5) Person 1 through Person 16 We recommend combining values of 1 and 2 when tabulating work registration status. See Appendix A for more details. 1 = Federal exemption for disability 2 = Federal exemption for reason other than disability 3 = Work registrant, not E&T participant 4 = Work registrant, voluntary E&T participant 5 = Work registrant, mandatory E&T participant | |

APPENDIX A

**ASSESSMENT OF THE QUALITY OF SELECTED VARIABLES
IN THE FY 2012 SNAP QC DATABASE**

This page has been left blank for double-sided copying.

We assessed the quality of coding for variables on the FY 2012 SNAP QC datafile that are new, changed, or have a history of coding inconsistencies or small sample sizes. Based on our assessment, we recommend against the use of some variables and recommend caution when using other variables as listed below and described in detail in the following sections. Specifically, we recommend against the use of the variables YRSEDi, RACETHi, VEHICLEA, and VEHICLEB for all tabulations; ABWDSTi for State-level tabulations for Connecticut, Maryland, Rhode Island, Utah, Virgin Islands, and Wyoming; FSAFILi for State-level tabulations of nonparticipants in Minnesota, West Virginia, and Wisconsin; DPCOSTi and FSDEPDED for any State-level tabulations; and URBRUR for State-level tabulations in Alabama, Nebraska, New Mexico, Utah, Washington, and Wisconsin.

We recommend caution when using ABWDSTi, DISi, EMPSTAi, EMPSTBi, EMPRGi, FSDIS, FSNDISCA, MN_FIP, NDISCAi, SSI_CAP, SUA1, SUA2, and WRKREGi for all tabulations; when using CTZNi, and URBRUR for any State-level tabulations; and when using TANFi in Minnesota.

The quality of AMTERR, CAT_ELIG, COMPOSITION, MED_DED_DEMO, NONCIT_HEAD, PURE_PA, and STATUS were also assessed and found to be suitable for all tabulations.

1. Highest Educational Level Completed (YRSEDi)

Because eight percent of adult participants have a missing or unknown value for YRSEDi, we recommend against using this variable.

2. Race/Ethnicity (RACETHi)

QC reviewers began implementing new values for RACETHi for all new applications and recertifications effective April 1, 2007, with the new values fully implemented by April 1, 2009. The new values allow reporting of multiple races and ethnicities, and also include values for unknown or unavailable race/ethnicity data.

The distribution of race and ethnicity categories is similar to the distribution in the FY 2011 file but differs substantially from the FY 2006 and previous data files. For instance, 20 percent of participants were coded as having unavailable, not recorded, or unknown racial/ethnic data in the FY 2012 file, compared with less than 1 percent coded as unknown in the FY 2006. The distribution of unknown or unavailable data varies considerably by State. Fewer than 5 percent of participants have unknown or unavailable RACETHi codes in 29 States while more than 60 percent of participants have these codes in 7 States.

Given the large percentage of participants coded with unknown or unavailable race/ethnicity information, we recommend against the use of this variable.

3. SNAP Case Affiliation (FSAFILi)

FSAFILi and CTZNI were consistently coded in the FY 2012 data file, with no ineligible noncitizens (CTZNI = 7–10) also coded as eligible participants (FSAFILi = 1), and no eligible noncitizens (CTZNI = 3–6) or eligible citizens (CTZNI = 1, 2) coded as ineligible noncitizens (FSAFILi = 4 or 18). Similarly, FSAFILi and ABWDSTi were consistently coded most of the time, but a small number of individuals (fewer than 3,000 weighted individuals) were inconsistently coded as both an ineligible ABAWD (FSAFILi = 10) and either not an ABAWD (ABWDSTi = 1) or an eligible ABAWD (ABWDSTi = 2–6).

FSAFILi can be used for tabulations of participants, but, because of a high percentage of missing or unknown values for nonparticipants, we recommend against the use of FSAFILi for State-level tabulations of nonparticipants in Minnesota, West Virginia, and Wisconsin. Furthermore, care should be taken to avoid State-level tabulations that result in small sample sizes.

4. Citizenship Status (CTZNI)

The noncitizen codes for CTZNI changed slightly in FY 2004, although the codes for U.S.-born citizens and naturalized citizens remained the same. The FY 2012 distribution of reasons for noncitizen eligibility and ineligibility is similar to the distribution in previous years. No participants

are coded as ineligible noncitizens, consistent with FY 2011. As a result, we recommend the use of CTZNI for tabulations, but care should be taken to avoid State-level tabulations that result in small sample sizes.

5. SNAP Employment and Training Program Status (EMPRGi), and Employment Status (EMPSTAi and EMPSTBi)

The coding for two employment status variables, EMPSTAi and EMPSTBi, in the FY 2012 file is mostly consistent with that in recent files. However, there are inconsistencies between the employment and earned income variables. For example, about seven percent of both participants coded as working 1–40+ hours (EMPSTBi = 2, 3, 4, 5) and participants not coded as not in the labor force or unemployed (EMPSTAi ≠ 1, 2) have no countable earnings. Given these inconsistencies, we recommend caution when using EMPSTAi and EMPSTBi to tabulate participants' employment status.

We are limited in our ability to assess EMPRGi, but did find some participants with EMPRGi codes inconsistent with YRSEDi (years of education) or WRKREGi (work registration status). Based on our limited assessment of EMPRGi and of the other work-related variables, we recommend caution when using EMPRGi.

6. Nondisabled Nonelderly Childless Adults Subject to Work Registration (ABWDSTi)

The distribution of ABWDSTi categories for FY 2012 is similar to the distribution on the FY 2011 file. Of those participants coded as a nondisabled nonelderly childless adult subject to work registration (ABAWD) (ABWDSTi=2-7), 93 percent are coded as being in a waived area. Of those participants coded as ABAWDs, 1 percent are coded as exempt, 2 percent as meeting work requirements, 2 percent as being in their first three months of receipt, and less than 1 percent as being in their second three months of receipt. No cases were coded as having exhausted time limits. Inconsistencies between ABWDSTi and other variables (e.g. WRKREGi, EMPSTAi, and EMSTBi) remain.

Because of the inconsistencies between $ABWDST_i$ and some of the employment variables ($WRKREG_i$, $EMPSTAi$, and $EMPSTBi$), we recommend caution when using the variable and further recommend combining values $ABWDST_i=2-7$ unless the specific State policies in effect regarding ABAWDs are known. Additionally, we continue to recommend that care be taken to avoid state-level tabulations that result in small sample sizes. We specifically recommend against using $ABWDST_i$ for state-level tabulations for Connecticut, Maryland, Rhode Island, Utah, Virgin Islands, and Wyoming.

7. Nondisabled Adults Age 18 to 49 in Childless Units ($NDISCA_i$ and $FSNDISCA$)

We added new variables to the FY 2011 SNAP QC file to identify nondisabled adults age 18 to 49 in childless units ($NDISCA_i$) and the number of these adults in each unit ($FSNDISCA$). We developed a new person-level disability indicator (DIS_i) for inclusion on the FY 2012 SNAP QC datafile and made a slight alteration to the $FSNDISCA$ and $NDISCA_i$ code to incorporate this newly developed person-level disability indicator.

Although 7 percent of individuals in the FY 2012 SNAP QC file are reported as ABAWDs ($ABWDST_i = 2-7$), we identify 10 percent as nondisabled adults age 18 to 49 in childless units ($NDISCA_i = 1$). Only four States had more individuals coded as ABAWDs than as nondisabled adults age 18 to 49 in childless units. Among States with more individuals coded as $NDISCA_i = 1$ than as ABAWDs, the percentage point differences ranged from approximately 1 to 13 percentage points.

The indicator of nondisabled adults age 18 to 49 in childless units captures a very high percentage of individuals coded as ABAWDs (85 percent). In 16 States, at least 95 percent of individuals coded as ABAWDs are also coded as $NDISCA_i = 1$. In all but 4 States, the percentage of ABAWDs coded as $NDISCA_i = 1$ is at least 70 percent.

We recommend using the revised NDISCA_i and FSNDISCA codes that incorporate the new person-level disability indicator (DIS_i) with the understanding that this new person-level disability indicator likely undercounts the number of nonelderly individuals with a disability.

8. Unit and Person-level Disability (FSDIS and DIS_i) and Work Registration Status (WORKREG_i)

We use unit-level information, such as receipt of SSI and reporting of medical expenses, to identify units with disabled members (FSDIS=1). Starting in FY 2012, we also use this information to identify disabled individuals (DIS_i).

In the FY 2006 file, the values for WRKREG_i changed mid-year, and a value was implemented to distinguish between an individual with a federal exemption because of a disability (WRKREG_i = 1) and an individual with a federal exemption for a reason other than a disability (WRKREG_i = 2). Although the intent behind the new WRKREG categories was to identify disabled individuals, we found continued evidence in the FY 2012 file of likely miscoding of this variable. As in the previous two years, we found some inconsistencies between WRKREG_i and ABWDST_i. Because of inconsistencies, likely miscoding, and our limited ability to assess WRKREG_i, we recommend caution when using the variable, and recommend combining values for WRKREG_i = 1 and WRKREG_i = 2.

We recommend using FSDIS with the awareness that it likely undercounts the number of units with disabled members. Because we are limited in our ability to assess the quality of the SSI and work registration variables that feed into our person-level disability algorithm, we recommend using the new individual-level disability indicator (DIS_i) with the understanding that it likely undercounts the number of nonelderly individuals with a disability. As a result of the likely miscoding and inconsistencies, we do not recommend using WRKREG_i to identify person-level disability.

9. Standard Utility Allowance (SUA1 and SUA2), Utility Amount (UTIL)

Nationwide, inconsistencies between recoded values of SUA1 and UTIL and between SUA2 and UTIL affect less than 1 percent of all units in the FY 2012 file and less than 3 percent of all units in each State. In FY 2012, three States (District of Columbia, Oregon, and Washington) used two heating and cooling standard utility allowance (HCSUA) amounts for the same unit type and time period. As a result, some units on the file in these States report one HCSUA while similar units in the same State and for the same month report a different HCSUA.

We recommend the use of SUA1 and SUA2 for tabulations in all States, with the awareness that units in the States mentioned above have multiple possible HCSUA values for certain time periods.

10. Dependent Care Costs (DPCOSTi) and Deduction (FSDEPDED)

Less than 1 percent of units in the U.S. with a positive dependent care deduction, positive dependent care costs, or both, and fewer than a tenth of a percent of all units in the file have inconsistent coding between DPCOSTi and FSDEPDED. In a few States, however, the number of units with inconsistencies as a percentage of all units with dependent care expenses or deductions is relatively high (up to 10 percent). In addition, the sample size of units with a dependent care deduction and/or dependent care costs is quite small in several States. Due to small sample sizes and inconsistencies in some States, we recommend against using DPCOSTi and FSDEPDED for State-level tabulations.

11. Vehicles and Assets

Beginning with the FY 2010 SNAP QC datafile, we changed positive values of FSVEHAST, LIQRESOR, OTHNLRES and REALPROP to \$0 for units not subject to a SNAP asset test because of their State's BBCE policy. Due to this coding change and the large number of States with BBCE, an increasing number of units have no recorded assets.

About 96 percent of all units have no countable assets (FSASSET = 0). Among units with positive countable vehicle assets (FSVEHAST > 0), some units are coded as having no vehicles

(VEHICLEA = 1, VEHICLEB = 1 or missing) or as having no countable vehicles (VEHICLEA = 1, 2, 3, 4, 5 and VEHICLEB=1, 2, 3, 4, 5 or missing). Because VEHICLEA and VEHICLEB are not consistent with FSVEHAST, and because only four percent of units have any recorded countable assets, we recommend against the use of either variable to tabulate the category of vehicle owned by the unit.

12. Locality (URBRUR)

Several States now use Local Agency Codes (LACs) that do not align to geographic areas and so cannot be used to classify units as being in a metropolitan, micropolitan, or rural area.¹ As a result of these changes, we cannot identify metropolitan status for a large percentage of cases in these States.

We recommend against using URBRUR in Alabama, Nebraska, New Mexico, Utah, Washington, and Wisconsin because we cannot identify metropolitan status for a large proportion of cases in these States. In addition, because of concerns about the representativeness of the sample at the sub-state level, we recommend caution when using URBRUR for any State-level tabulations.

13. SSI-CAP (SSI_CAP)

Because the raw SNAP QC data does not identify units that enter SNAP through an SSI-CAP, we use an algorithm for identifying, recoding, and assigning benefits for SSI-CAP units in States with SSI-CAP. In FY 2012, these States included Arizona, Florida, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Mississippi, New Jersey, New Mexico, New York, North Carolina, Pennsylvania, South Carolina, South Dakota, Texas, Virginia, and Washington.

The proportion of SSI-CAP-eligible SNAP participants that appear to have participated through SSI-CAP varies greatly by State. In Washington and New York, 93 percent and 86 percent,

¹ Metropolitan Statistical Areas have at least one urbanized area of 50,000 or more population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties. Micropolitan Statistical Areas—a new set of statistical areas—have at least one urban cluster of at least 10,000 but less than 50,000 population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties (OMB Bulletin No. 04-03).

respectively, of participating SNAP units eligible for SSI-CAP appear to have participated through the program. Conversely, our algorithm identified only one percent of unweighted units in New Jersey as SSI-CAP participants, and in five other States, fewer than 10 percent of potential SSI-CAP units appear to have participated through the program. Because SSI-CAP units are not directly identified in the raw data but rather through an algorithm that relies on available data, the SNAP QC datafile may underestimate the actual number of SSI-CAP units in some States. We recommend caution when using SSI_CAP

14. TANF Recipients in the Minnesota Family Investment Program (MN_FIP)

In general, we code units in Minnesota with TANF income as MFIP units. The reported TANF amounts for these units are typically very small, likely because of federal Quality Control System constraints. Specifically, when States transmit a quality control record, the national computer system checks that the unit's gross income is equal to the sum of all reported income types. Because TANF income is not used in the MFIP benefit calculation, it is not included in reported gross income, resulting in a fatal error in the data transmission.

In the FY 2012 data file, there are 81 unweighted units in Minnesota with TANF income, with TANF amounts between \$1 and \$4.

Because TANF receipt may not be recorded for some units receiving an MFIP cash assistance benefit, we recommend using the MFIP variable (MN_FIP) with the understanding that it may slightly undercount the number of MFIP units. We caution against using MFIP units' TANF income.

15. Categorical Eligibility (CAT_ELIG) and Pure Cash Public Assistance (PURE_PA)

In FY 2012, most States had BBCE policies that conferred categorical SNAP eligibility on all units authorized to receive a TANF or Maintenance of Effort (MOE) funded noncash benefit. In such States, units meeting the State-determined eligibility criteria for the TANF/MOE-funded noncash benefit were also eligible for SNAP benefits and thus are exempt from the SNAP asset or

income tests. We identified units that would have been categorically eligible under their State's BBCE policy and, if they were not already coded as categorically eligible, set CAT_ELIG=2.² In addition, we recoded units as categorically eligible if they were identified as pure PA units but had not previously been specified as categorically eligible.

Ninety-one percent of all participating units nationally are coded as categorically eligible for SNAP benefits. This includes the 7 percent of all units that were not already coded as categorically eligible, but satisfied the criteria for their State's BBCE program and were recoded as categorically eligible (CAT_ELIG=2). In four States, over 30 percent of all BBCE units were recoded as categorically eligible (CAT_ELIG=2), including Idaho, where 88 percent of the participating BBCE units were recoded as categorically eligible (CAT_ELIG=2).

Twenty-three percent of all units nationally are pure PA units. All pure PA units are also coded as categorically eligible, and 25 percent of all categorically eligible units are pure PA.

We recommend the use of CAT_ELIG and PURE_PA for all tabulations.

16. Medical Deduction Demonstrations (MED_DED_DEMO)

Nationally, we identified 24 percent of units with a positive medical deduction as participating in a medical deduction demonstration program. In the 11 states that had medical deduction demonstration programs throughout FY 2012, all units with medical deductions were coded as receiving a deduction equal to the standard medical deduction demonstration amount.

We recommend using MED_DED_DEMO for all tabulations.

17. Unit level non-citizen head (NONCIT_HEAD)

The NONCIT_HEAD variable, added in FY 2012, identifies SNAP units where the head of the unit is a non-citizen. In the FY 2012 file, 90 percent of SNAP households are headed by a U.S.

² See Section 8 of Appendix B for the specified conditions used to classify units as categorically eligible.

citizen, 5 percent by participating noncitizens, and the remaining 5 percent by nonparticipating noncitizens. We recommend using NONCIT_HEAD for all tabulations.

18. Presence of adults and/or children (COMPOSITION)

The COMPOSITION variable, added in FY 2012, indicates whether the household contains children, adults, or both. We recommend using COMPOSITION for tabulations.

19. Indicator for units receiving over/under issuance of benefits (STATUS) and error amount (AMTERR)

Beginning with the FY 2012 SNAP QC data, QC reviewers were instructed to record any overissuance or underissuance error, even though those under the new \$50 tolerance threshold will not be included in the calculation of the State agency's error rate. Previously, only errors of \$26 or more were reported. Units coded as receiving an overissuance or underissuance increased from 7 percent in FY 2011 to 36 percent in FY 2012.

We recommend using using STATUS and AMTERR for tabulations.

APPENDIX B

AUTOMATED EDITS TO SNAP UNITS

This page has been left blank for double-sided copying.

In any raw data file, there are often inconsistencies in the way data are entered that can be resolved by simple algorithms. In the FY 2012 SNAP QC raw datafile, we performed the automated edits described below.

1. Missing and Miscoded SNAP Affiliation (FSAFILi) Codes

We checked for instances where the SNAP case affiliation codes in the raw datafile were missing. If the individual had non-missing age and gender, we recoded them as potential SNAP participants. That is, we first recoded FSAFILi as “unknown” (99) and then set it to 1 if certain other conditions, described below, were met.

We also checked for instances where the SNAP case affiliation codes in the raw datafile were inconsistent with other coded variables on the file such as citizenship, ABAWD status, and receipt of SSI and TANF. We were able to recode many of the inconsistencies:

- We set the affiliation codes of California SSI recipients to 15.
- If there were differences between the unit size (count of those with affiliation code of 1) and the certified household size, we checked to see which size matched the reported benefit and edited the affiliation codes accordingly. We also resolved differences by recoding any affiliation codes that were inconsistent with citizenship or ABAWD status.
- MFIP uses unit composition rules that differ from those in regular SNAP. Specifically, SSI and TANF recipients living in the same household are treated as separate SNAP units. Consequently, if a Minnesota unit of more than one person had both SSI and TANF income, we set the affiliation code of the SSI recipient to unknown (99).

2. Vehicle Assets

The following States consider the value of some vehicles when determining asset eligibility for households that are not categorically eligible: Alaska, Arkansas, Delaware, Guam, Idaho, Illinois, Iowa, Maine, Michigan, Minnesota, Nebraska, Nevada, New Hampshire, New York, North Dakota, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Texas, Vermont, the Virgin Islands, and Washington. For all other States, we reset any reported vehicle assets to \$0 because the States exclude the value of all vehicles when determining asset eligibility.

3. Child Support Deduction and Child Support Income

We checked for instances of the reported child support expense deduction being exactly equal to the reported countable unit child support payment income. Although it is possible for a unit to have both child support expenses and child support income, it is highly unlikely that the two would be exactly equal in value. In these units, we checked to see if either of the amounts should be excluded by using the following procedure:

- If unit income less child support income was within \$5 of reported gross income, we set child support income and any income outside the unit to \$0.
- If calculated net income for the unit was within \$5 of reported net income, we set any income outside the unit to \$0, retaining both child support income and the child support deduction.
- If the difference between calculated net income and reported net income was greater than or equal to child support income, and the calculated net income was greater than reported net income, we set child support income and any income outside the unit to \$0.
- If the difference between calculated net income and reported net income was less than child support income, and the calculated net income was less than reported net income, we set the child support expense deduction to \$0.

In addition, if a unit was not categorically eligible, included no elderly or disabled individuals, and would have passed the gross income test for eligibility if the child support deduction was excluded but would not if it was included, we excluded the child support deduction from unit gross income and set the child support deduction to \$0.

4. Dependent Care Costs³

The QC datafile includes units for which the QC reviewers recorded dependent care expenses for the parent rather than for the dependent. We corrected for this error, as follows:

- If dependent care expenses were assigned to adults between age 18 and 59 without SSI and there were children in the unit without dependent care expenses, we set the expenses to \$0 for the adults and distributed them among the children in the following order:
 1. If the unit contained at least one member age 0 to 4, we distributed the costs evenly to unit members from age 0 to 8.

³ These edits excluded households identified as MFIP or SSI-CAP.

2. If the unit did not contain a member age 0 to 4, we distributed the costs evenly to any unit members from age 5 to 13.
3. If the unit did not contain a member age 0 to 13, we distributed the costs evenly to any unit members from age 14 to 17.

In units where the calculated benefit matched the raw benefit, we assumed the recorded dependent care deduction was correct and, if necessary, recoded the costs to make them consistent with the deduction. We followed these guidelines to reconcile differences between the dependent care deduction and expenses:

- If the dependent care deduction was greater than the total value of dependent care costs, we set the costs equal to the deduction by assigning dependent care costs to unit members who originally had positive dependent care expenses.
- If no unit members originally had recorded dependent care expenses, we assigned costs to unit members in the following order:
 1. If the unit contained at least one member age 0 to 4, we distributed costs evenly to unit members from age 0 to 8.
 2. If the unit did not contain a member age 0 to 4, we distributed costs evenly to any unit members from age 5 to 13.
 3. If the unit did not contain a member age 0 to 13, we distributed costs evenly to any unit members from age 14 to 17.
 4. If the unit did not contain a member age 0 to 17, we distributed costs evenly to any unit members of age 18 or older with SSI.
 5. If the unit did not contain a member age 0 to 17 or an adult with SSI, we distributed costs to elderly unit members without SSI.
 6. If the unit did not contain a member age 0 to 17 or an adult with SSI or an elderly unit member without SSI, we distributed costs evenly to any unit members age 18 or older.
- If a unit had positive dependent care costs but no dependent care deduction, we set the recorded costs to \$0.

5. SUA Usage and Proration⁴

The SNAP QC datafile includes two variables that describe the use of standard utility allowances (SUAs). One variable records the usage of and entitlement to SUAs (SUA1); the other

⁴ These edits exclude households identified as MFIP or SSI-CAP participants. SSI-CAP participants in States with a standard benefit had SUA1 and SUA2 set to missing. SSI-CAP participants in States with a standardized shelter expense had SUA1 set to 9 (“Other”) and SUA2 set to 1 (not prorated).

records the proration of utility allowances in shared housing situations (SUA2). In units where the calculated benefit matched the raw benefit, we assumed the recorded utility amount to be correct. For these units, we recoded the SUA1 and SUA2 variables to make them consistent with the utility amount. For units coded as receiving a type of SUA not used in the State, we recoded SUA1 regardless of the result of the benefit calculation.

In most States, we checked for full SUA values as well as for half SUA values (see Table F.5).⁵ If the utility amount equaled a full SUA value, we confirmed that SUA1 indicated the correct SUA type and that SUA2 was coded as “not prorated.” If the utility amount equaled half of an SUA value, we confirmed that SUA1 indicated the correct SUA type and that SUA2 was coded as “prorated.” However, in States that use individual standards we checked half SUA values for HCSUA and LUA but only full SUA values for the telephone SUA, electricity SUA, or both (telephone plus electricity). If the utility amount did not equal a full or half SUA value and was not coded as prorated, we coded the unit as using individual standards in States with individual standards and as using actual expenses in other States. However, in States where SUA use was mandatory and the State did not use individual standards, we did not change the values from the raw datafile and were unable to reconcile the value of SUA1 and SUA2.⁶

6. Pure Public Assistance Units

We flagged the following types of units as pure PA units:

- Units containing only children where at least one member received TANF income
- Units where at least one member received TANF income and where every adult member of the unit received TANF, SSI, or GA income
- Units where every adult and every child received SSI or GA income

⁵ Prorated values are not always equal to half of the full SUA value. However, because of the multitude of possible values, we checked only for values that were half of the full amount.

⁶ Forty-seven States mandated the use of an SUA, rather than actual utility costs, throughout FY 2012.

- All MFIP units

7. Categorical Eligibility

Most States have adopted BBCE policies that confer categorical SNAP eligibility on all units authorized to receive a TANF or Maintenance of Effort (MOE) funded noncash benefit. In such States, units meeting the State-determined eligibility criteria for the TANF/MOE-funded noncash benefit are also eligible for SNAP benefits and thus are exempt from the SNAP income, or for most States, asset tests. In States with BBCE policies, most units were already identified as categorically eligible through the CAT_ELIG flag, which is set to 0 for units that are not categorically eligible and to 1 for units reported as categorically eligible in the raw file. We set the CAT_ELIG flag to 2 for units identified as pure PA units that had not previously been coded as categorically eligible and for units in the following States meeting the specified criteria:

Alabama. All units with (1) gross income at or below 130 percent of poverty or (2) only elderly or disabled individuals and gross income at or below 200 percent of poverty and net income at or below 100 percent of poverty

Arizona, Connecticut, Maine, New Jersey, Oregon, and Vermont. All units with gross income at or below 185 percent of poverty

California and West Virginia. All units with gross income at or below 130 percent of poverty

Colorado. All units with net income at or below 100 percent of poverty and either (1) gross income at or below 130 percent of poverty or (2) any elderly or disabled individuals and gross income at or below 200 percent of poverty

Delaware, District of Columbia, Florida, Hawaii, Maryland, Nevada, North Carolina, Washington and Wisconsin. All units with gross income at or below 200 percent of poverty

Georgia. All units with (1) gross income at or below 130 percent of poverty or (2) only elderly or disabled individuals and gross income at or below 200 percent of poverty

Guam, Minnesota, and New Mexico. All units with gross income at or below 165 percent of poverty

Idaho. All units with countable assets at or below \$5,000, net income at or below 100 percent of poverty, and either (1) gross income at or below 130 percent of poverty or (2) any elderly or disabled individuals

Illinois, Kentucky, Ohio, South Carolina, and Virgin Islands. All units with (1) gross income at or below 130 percent of poverty or (2) any elderly or disabled individuals and gross income at or below 200 percent of poverty

Iowa. All units with gross income at or below 160 percent of poverty

Louisiana, Mississippi, and Oklahoma. All units with net income at or below 100 percent of poverty and either (1) gross income at or below 130 percent of poverty or (2) any elderly or disabled individuals

Massachusetts. All units (1) with gross income at or below 200 percent of poverty with either (i) children aged 18 or younger present living with a parent or caretaker or (ii) any elderly or disabled individuals or (2) with net income at or below 100 percent of poverty and gross income at or below 130 percent of poverty

Michigan. All units with gross income at or below 200 percent of poverty and countable assets at or below \$5,000

Montana and North Dakota. All units with net income at or below 100 percent of poverty and gross income at or below 200 percent of poverty

Nebraska. All units with net income at or below 100 percent of poverty, countable assets at or below \$25,000, and either (1) gross income at or below 130 percent of poverty or (2) any elderly or disabled individuals

New Hampshire. All units with children under age 22 and a relative of the child present and gross income at or below 185 percent of poverty

New York. All units with (1) gross income at or below 130 percent of poverty, (2) any elderly or disabled individuals and gross income at or below 200 percent of poverty, or (3) dependent care expenses and gross income at or below 200 percent of poverty

Pennsylvania. All units with (1) gross income at or below 160 percent of poverty or (2) any elderly or disabled individuals and gross income at or below 200 percent of poverty (through May 2012); all units with (1) gross income at or below 160 percent of poverty and countable assets at or below \$5,500 or (2) any elderly or disabled individuals, gross income at or below 200 percent of poverty, and countable assets at or below \$9,000 (June 2012 and thereafter)

Rhode Island. All units with (1) gross income at or below 185 percent of poverty or (2) any elderly or disabled individuals and gross income at or below 200 percent of poverty

Texas. All units with gross income at or below 165 percent of poverty and countable assets at or below \$5,000

8. State SSI Supplements

Some States appear to have coded State SSI supplements as Other Government Benefits or Other Unearned Income, rather than as SSI. Beginning with the FY 2011 datafile, we added these types of income to SSI (and set Other Government Benefits or Other Unearned Income to 0) if the total amount of one of those income types was equal to the State's SSI supplement for individuals or couples.

9. Person Level Disability

The QC datafile does not directly identify individuals with disabilities. However, we can use information in the QC datafile—such as SSI receipt, or worker registration status—to identify those who are likely to be disabled. Starting in FY 2012, we used the following procedure to flag individuals as disabled:

- We identify as disabled most individuals under age 60 with $SSI_i > 0$. Exceptions are made if they are the only individual in the unit to have both SSI and a work registration status indicating a federal exemption for a reason other than a disability ($WRKREG_i = 2$) and meet any of the following conditions:
 1. Individual is an adult (age 18 to 59) living with at least one individual who does not have SSI, does not have earned income, and has a work registration status indicating disability ($WRKREG_i = 1$). In these cases, we code the first child in the unit with $WRKREG_i = 1$ as disabled; or, if there are no children in the unit, we code the first adult in the unit with $WRKREG_i = 1$ as disabled. We do not code the adult with SSI and $WRKREG_i = 2$ as disabled.
 2. Individual is a child (age 0 – 17) living with at least one child who does not have SSI, does not have earned income, and has a work registration status indicating disability. In these cases, we code the first child in the unit with $WRKREG_i = 1$ as disabled. We do not code the child with SSI and $WRKREG_i = 2$ as disabled.
 3. Individual does not meet conditions (1) or (2) but is in the labor force ($EMPSTAi > 1$), has earned income, has no Social Security, veterans' benefits, or workers' compensation, and is living with at least one child with no SSI. In these cases, we code the first child in the unit as disabled. We do not code the individual described above with SSI as disabled.
- We identify as disabled all nonelderly adults who satisfy all three of the following conditions:
 1. Coded as working fewer than 30 hours per week ($EMPSTBi \leq 3$) and have monthly earnings equal to less than the equivalent of the monthly federal minimum wage for someone working 30 hours a week
 2. Coded as being exempt from work registration due to disability
 3. Receiving Social Security, veterans' benefits, or workers' compensation.
- In units where no individual is identified as disabled based on the above criteria, but where the unit receives a medical deduction and has no elderly individuals, we code at least one individual as disabled. We do so by looking for the following types of individuals, stopping when a step codes one or more individuals as disabled.
 1. Individuals with a work registration status indicating disability. (Code all as disabled.)
 2. Individuals with Social Security, veterans' benefits, or workers' compensation and coded as working fewer than 30 hours per week. (Code all as disabled.)

3. Individuals with Social Security, veterans' benefits, or workers' compensation. (Code all as disabled.)
4. Child coded as working fewer than 30 hours per week. (Code first as disabled.)
5. Adult coded as working fewer than 30 hours per week. (Code first as disabled.)

If the unit did not contain any of the types of individuals listed above, we coded all individuals in the unit as disabled.

APPENDIX C

**VARIABLES THAT WERE DROPPED, SIGNIFICANTLY CHANGED,
OR NEW ON THE FY 2012 SNAP QC DATAFILE**

This page has been left blank for double-sided copying.

Note: Information regarding variables on the FY 2011 SNAP QC datafile may be found in *Technical Documentation for the Fiscal Year 2011 SNAP QC Database and QC Minimodel* (Leftin et al. 2012).

Variables Dropped on the FY 2012 SNAP QC Datafile

None

Variables Changed on the FY 2012 SNAP QC Datafile

| | |
|----------------------|--|
| AMTERR | Beginning in FY 2012, AMTERR is reported for all differences between the benefits the State authorized and the benefits the State should have authorized. Previously, only differences larger than \$25 were reported. |
| FSNDISCA and NDISCAi | Beginning in FY 2012, we use the new variable DISi to determine FSNDISCA and NDISCAi. In FY 2011, we used a similar but slightly different algorithm to identify disabled individuals. |
| STATUS | Beginning in FY 2012, the STATUS variable records all over or under issuances, regardless of the amount. Previously, this variable only recorded errors larger than \$25. |

New Variables on the FY 2012 SNAP QC Datafile

| | |
|-------------|---|
| DISi | Flag for individual level disability. (See description in Appendix B.) |
| COMPOSITION | Unit level code to indicate presence of children and/or adults. |
| NONCIT_HEAD | Unit level code to indicate the unit head is a non-citizen, and participation status. |

This page has been left blank for double-sided copying.

APPENDIX D

DERIVATION OF WEIGHTS BY STATE AND MONTH

This page has been left blank for double-sided copying.

Tables D.1 through D.3 present the final calculated weighted counts of SNAP units, individuals, and benefit amounts in the FY 2012 SNAP QC file. Tables D.4 through D.15 show the preliminary monthly weights (HWGT) and their derivation for each State and stratum. The preliminary weights (Stratum-Specific Weights) are derived as follows:

| Data | Column | Derivation |
|----------------------------------|----------|----------------------|
| Sampling Interval | a | Raw data |
| Stratum Sampling Size | b | Raw data |
| SNAP Units in Stratum (unedited) | c* | a*b |
| Stratum Share of State Sample | d* | c/(sum c over state) |
| SNAP Units in State | e | Raw data |
| SNAP Units in Stratum (edited) | f* | d*e |
| Units with Complete Reviews | g | Raw data |
| Ineligible Units | h | Raw data |
| Disqualification Rate | i | h/g |
| Adjusted SNAP Units in State | j | (1-i)*f |
| Failing Units | k | Raw data |
| Stratum Sampling Size | l | g-h-k |
| Stratum-Specific Weight | m | j/l |

*Column omitted from published tables due to space limitations; available on request.

As described in Chapter III, Section C, the preliminary monthly stratum-specific unit weights are the starting point for creating the final weights. After deriving the preliminary weights, we used a nonlinear programming technique to create final weights that match the adjusted monthly Program Operations number of units, participants, and benefits. In Chapter III, Section C, we provide a detailed description of the derivation of sampling weights.

Table D.1. Calculated Weighted Unit Counts By State and Month

| State | October 2011 | November 2011 | December 2011 | January 2012 | February 2012 | March 2012 | April 2012 |
|----------------------|-----------------|------------------|------------------|-----------------|------------------|---------------|---------------|
| Alabama | 403,344 | 411,396 | 398,412 | 411,949 | 405,430 | 404,826 | 404,235 |
| Alaska | 31,529 | 36,904 | 37,546 | 38,170 | 37,911 | 38,977 | 39,600 |
| Arizona | 479,705 | 472,123 | 484,592 | 483,039 | 465,975 | 472,409 | 457,833 |
| Arkansas | 218,344 | 204,238 | 219,183 | 218,991 | 211,765 | 209,573 | 214,374 |
| California | 1,720,236 | 1,722,785 | 1,738,884 | 1,730,081 | 1,750,085 | 1,774,677 | 1,755,590 |
| Colorado | 208,424 | 211,901 | 213,097 | 215,098 | 216,514 | 223,002 | 218,413 |
| Connecticut | 207,580 | 214,344 | 213,802 | 220,259 | 204,844 | 216,152 | 205,710 |
| Delaware | 66,282 | 67,636 | 67,419 | 68,640 | 68,189 | 70,121 | 68,831 |
| District of Columbia | 78,962 | 77,373 | 79,634 | 79,382 | 79,298 | 76,630 | 76,983 |
| Florida | 1,750,037 | 1,769,675 | 1,791,776 | 1,772,763 | 1,799,179 | 1,824,243 | 1,823,623 |
| Georgia | 848,975 | 855,332 | 842,292 | 857,835 | 830,628 | 873,090 | 867,358 |
| Hawaii | 83,603 | 84,580 | 81,926 | 84,017 | 86,876 | 87,655 | 85,634 |
| Idaho | 99,189 | 99,949 | 99,538 | 101,531 | 102,081 | 99,545 | 99,843 |
| Illinois | 887,218 | 887,357 | 910,295 | 887,715 | 872,910 | 904,902 | 892,838 |
| Indiana | 381,850 | 390,670 | 384,699 | 395,557 | 384,565 | 390,691 | 393,629 |
| Iowa | 184,833 | 185,479 | 185,712 | 187,849 | 189,240 | 186,701 | 191,574 |
| Kansas | 139,988 | 138,527 | 133,680 | 138,063 | 137,517 | 138,556 | 133,647 |
| Kentucky | 391,658 | 392,394 | 394,254 | 382,167 | 385,938 | 396,067 | 397,286 |
| Louisiana | 406,436 | 405,943 | 399,941 | 393,061 | 395,505 | 397,384 | 392,175 |
| Maine | 124,743 | 129,610 | 127,685 | 129,644 | 131,043 | 128,651 | 131,752 |
| Maryland | 353,242 | 354,110 | 350,126 | 346,222 | 356,682 | 357,590 | 349,519 |
| Massachusetts | 463,858 | 453,969 | 449,875 | 459,548 | 474,807 | 472,018 | 481,499 |
| Michigan | 948,058 | 933,974 | 902,269 | 927,375 | 916,270 | 913,795 | 921,081 |
| Minnesota | 259,233 | 253,804 | 259,044 | 262,077 | 259,067 | 265,125 | 254,785 |
| Mississippi | 283,077 | 288,095 | 282,845 | 291,881 | 292,747 | 284,967 | 293,957 |
| Missouri | 430,628 | 433,739 | 427,217 | 434,247 | 425,988 | 427,728 | 415,329 |
| Montana | 55,971 | 58,724 | 57,581 | 56,860 | 59,430 | 58,804 | 59,275 |
| Nebraska | 75,249 | 74,333 | 74,165 | 76,641 | 77,572 | 76,296 | 77,148 |
| Nevada | 164,221 | 165,403 | 159,895 | 164,204 | 166,410 | 164,440 | 164,921 |

APPENDIX F
FY 2012 SNAP PARAMETERS

This page has been left blank for double-sided copying.

Table F.1. SNAP Gross Income Screen, FY 2012

| Unit Size | Gross Income Screen (dollars per month) ^a | | |
|-----------------|---|---------|---------|
| | Contiguous United States, Guam, and the Virgin Islands | Alaska | Hawaii |
| 1 | \$1,180 | \$1,474 | \$1,359 |
| 2 | 1,594 | 1,992 | 1,835 |
| 3 | 2,008 | 2,509 | 2,310 |
| 4 | 2,422 | 3,027 | 2,786 |
| 5 | 2,836 | 3,545 | 3,261 |
| 6 | 3,249 | 4,063 | 3,737 |
| 7 | 3,663 | 4,581 | 4,212 |
| 8 | 4,077 | 5,099 | 4,688 |
| Each Additional | +414 | +518 | +476 |

Source: U.S. Department of Agriculture, FNS.

^a The fiscal year 2012 SNAP gross monthly income limits were based on the 2011 poverty guidelines issued by the U.S. Department of Health and Human Services. FNS derived the fiscal year 2012 gross income limits by multiplying the 2011 poverty guidelines by 130 percent, dividing the results by 12, and then rounding up to the nearest dollar.

Table F.2. SNAP Net Income Screen, FY 2012

| Unit Size | Net Income Screen (dollars per month) ^a | | |
|-----------------|---|---------|---------|
| | Contiguous United States, Guam, and the Virgin Islands | Alaska | Hawaii |
| 1 | \$908 | \$1,134 | \$1,045 |
| 2 | 1,226 | 1,532 | 1,411 |
| 3 | 1,545 | 1,930 | 1,777 |
| 4 | 1,863 | 2,329 | 2,143 |
| 5 | 2,181 | 2,727 | 2,509 |
| 6 | 2,500 | 3,125 | 2,857 |
| 7 | 2,818 | 3,524 | 3,240 |
| 8 | 3,136 | 3,922 | 3,606 |
| Each Additional | +319 | +399 | +366 |

Source: U.S. Department of Agriculture, FNS.

^a The fiscal year 2012 SNAP net monthly income limits were based on the 2011 poverty guidelines issued by the U.S. Department of Health and Human Services. FNS derived the Fiscal Year 2012 net income limits by dividing the 2011 poverty guidelines by 12 and rounding up to the nearest dollar.

Table F.3. Deduction Amounts, FY 2012

| Deduction | Contiguous United States | Alaska | Hawaii | Guam | Virgin Islands |
|--|---|--------|--------|-------|----------------|
| Standard Deduction | | | | | |
| 1-2 people | \$147 | \$252 | \$208 | \$296 | \$130 |
| 3 people | 147 | 252 | 208 | 296 | 130 |
| 4 people | 155 | 252 | 208 | 310 | 155 |
| 5 people | 181 | 252 | 208 | 362 | 181 |
| 6 or more people | 208 | 260 | 239 | 416 | 208 |
| Maximum Excess Shelter Expense Deduction | 459 | 734 | 619 | 539 | 362 |
| Homeless Household Shelter Deduction | 143 | 143 | 143 | 143 | 143 |
| Earnings Deductions | The MFIP earnings deduction is 38 percent. The earnings deduction for all other SNAP cases is 20 percent. | | | | |

Source: U.S. Department of Agriculture, FNS.

Note: MFIP has a separate SNAP benefit calculation procedure that does not include any deductions except for the earnings deduction. As a result, all the other deductions are coded as missing for MFIP participants in the SNAP QC database. Similarly, deductions are not used to assign benefits to units participating in SSI Combined Application Projects (SSI-CAP) in States with standardized benefit amounts. Consequently, all deductions are coded as missing for SSI-CAP participants in these States. SSI-CAP States without standardized benefits (or standard shelter expenses) use some deductions, but not all. The deductions that are not applicable are coded as missing.

Table F.4. Medical Deduction Demonstration Programs, FY 2012

| Medical Expenses | Medical Deduction |
|-----------------------------|----------------------------|
| Arkansas ^a | |
| Greater than \$138 | Actual Expenses minus \$35 |
| Less than or equal to \$138 | \$103 |
| Illinois | |
| Greater than \$245 | Actual Expenses minus \$35 |
| Less than or equal to \$245 | \$210 |
| Iowa | |
| Greater than \$140 | Actual Expenses minus \$35 |
| Less than or equal to \$140 | \$105 |
| Kansas | |
| Greater than \$175 | Actual Expenses minus \$35 |
| Less than or equal to \$175 | \$140 |

^a HCSUA is a standard utility allowance used for units with heating and cooling expenses not included in rent. The HCSUA generally includes all utilities, including telephones.

^b LUA is a standard utility allowance used for units that do not have heating and cooling expenses separate from rent. The LUA generally includes all utilities, including telephones.

^c The telephone allowance is a standard utility allowance used for units that have telephone expenses but do not have any other utility expenses.

^d Single-utility standard.

^e A single utility standard for gas/fuel unless otherwise noted.

^f Alaska has six HCSUAs determined by utility regions.

^g In October, 2011 through February, 2012, the District of Columbia's correct HCSUA was \$312. However, during this time, the State used both \$300 and \$312 for the HCSUA.

^h In October, 2011 through November, 2011, Oregon's correct HCSUA was \$395. However, during this time, the State used both \$395 and \$397 for the HCSUA.

ⁱ In October, 2011 through November, 2011, Washington's correct HCSUA was \$394. However, during this time, the State used both \$385 and \$394 for the HCSUA.

^j Wisconsin has a single utility standard for space heating, space cooling, and hot water.

QUALITY CONTROL REVIEW SCHEDULE

This page has been left blank for double-sided copying.

QUALITY CONTROL REVIEW SCHEDULE

PRIVACY ACT/PAPERWORK REDUCTION ACT. According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0584-0299. The time required to complete this collection is estimated to average 1.056 hours per response, including the time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection. This report is required under provisions of 7 CFR 275.14. This information is needed for the review of State performance in determining recipient eligibility. The information is used to determine State compliance, and failure to report may result in a finding of non-compliance.
