Progress Together

Mathematica's State Medicaid Consulting and Advisory Services

Progress together—close partnerships where you need us the most

Shared goals, mission, and experience: We understand you

State Medicaid agencies strive to deliver responsive, timely, and quality services to consumers in a cost-effective manner. You balance the priorities and interests of diverse stakeholders while meeting state and federal mandates. To achieve these goals, you might need more than a vendor. Instead, you need a true partner who shares and believes in your vision for Medicaid. Mathematica, an employee-owned and mission-driven organization, is just that partner. We understand the state Medicaid landscape and provide experienced consulting and advisory services that advance your agency's mission and look out for your best interests. From strategic planning, policy development, and program creation, to program implementation, administration, and operational activities, Mathematica is here to help.

The Mathematica edge: Subject matter experts and trusted advisers

As a nationally recognized policy and advisory services organization, Mathematica is known for our deep, unparalleled knowledge of the Medicaid program in state and federal government.

In the past five years alone, we have supported Medicaid agencies in all 50 states and the District of Columbia. Our Medicaid experts leverage their knowledge of state and federal Medicaid policy, strategy, and operations on behalf of our clients to tailor responses, services, and solutions unique to the needs of each state Medicaid agency. By bringing our broad view of best practices from other states, as well as our understanding of the Centers for Medicare & Medicaid Services's (CMS) expectations, we can support and enable you to implement and deliver innovative programs and policies more efficiently and cost-effectively, ultimately benefiting your consumers. Examples of our work with states include the following:

- We have worked in all 50 states to help them improve the quality of their Transformed Medicaid Statistical Information System (T-MSIS) data submissions, Core Set measures, and performance indicator data.
 - Our policy and programmatic assistance includes helping states design their 1115 demonstration evaluations.
 - To help states combat the opioid epidemic, we are supporting the implementation of the Maternal Opioid Misuse model and supported the development of the T-MSIS Substance Use Disorder Data Book.
-

We are a team of subject matter experts who also serve as a primary trusted adviser to the CMS Center for Medicaid and CHIP (Children's Health Insurance Program) Services. Examples of our work with CMS include the following:

- Our data analytics work includes assisting CMS with upper payment limit calculations and upgrading its estimates of state spending on long-term services and supports.
- We have also helped CMS develop Medicaid quality measures, with a specific expertise in measures for long-term services and supports.
- Known for our evaluation work, Mathematica has also conducted some of the most formative evaluations of 1115 demonstrations, CHIP, and the Money Follows the Person demonstration.

Versatile, flexible, and close partnerships

Mathematica leverages our team members' versatility to meet you where you need us the most. Our state-facing team members have served in executive leadership positions in states, understand the politics and pressure associated with being a state Medicaid executive, and are ready and able to support you. Our supporting team members bring dynamic and broad expertise that can holistically support your programmatic and policy needs.

- In addition to consulting and advisory services, Mathematica has launched three new state Medicaid market service lines leveraging three decades of Medicaid and CHIP experience: Enterprise Risk Management/Program Integrity¹, Value-Based Care², and Data Strategy and Production Systems³.
- Mathematica has added senior management and service line leads who have extensive state Medicaid operational and policy experience in these three key service areas and who can provide fast, nimble, and authoritative policy, program, and operational support to help drive new initiatives forward.
- We have Medicaid data expertise that spans every state. This expertise comes from deep experience leading T-MSIS and direct work with state Medicaid staff that required detailed, state-specific data and program knowledge, as well as direct access to numerous state information systems. We can provide advanced analytics in close collaboration with state business intelligence and data systems leads.
- We can leverage our deep knowledge of federal Medicaid compliance requirements to help produce federal filings, reports, and website maintenance.
