Community Transition Dashboard

Monitor supports and outcomes of people transitioning to the community

People receiving long-term services and supports (LTSS) in institutional settings deserve the opportunity to return successfully to their communities if they can. But transitions back to the community are complex, and effective monitoring of community transitions requires a system that can track a variety of service, support, and outcome measures at all stages of the transition journey.
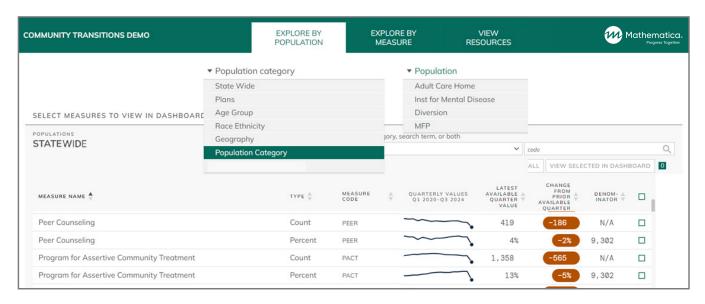

Mathematica's Community Transition Dashboard integrates your program data to examine service delivery and program performance at the state level, by population, or individually. Demographic and programmatic stratifications let you easily drill down by topic.
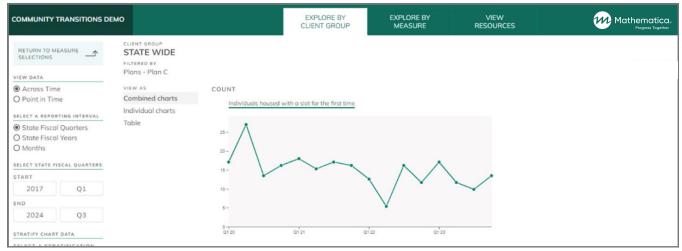

The Community Transition Dashboard provides the insights you need to understand and improve participants' community transition experience.

Community Transition Dashboard Advantages

/ **Integrating data from multiple sources** is necessary to tell the complete story about community transitions, drawing on information about program enrollment, claims and encounters, housing and lease data, participant experience and more.

/ **Tested transition measures** provide comprehensive insight into the factors and outcomes influencing the stability of community living and participants' quality of life, including HCBS Quality Measure preparation.

/ **Advanced analysis** of interventions and service optimization supports program goals and manage transitioning populations.

/ **Quality assurance and program improvement** depend on a centralized data repository and accessible dashboard to address issues in a timely and evidenced-based manner.

Community Transition Dashboard

HCBS Quality Measures

Money Follows the Person states will begin reporting the number of people successfully transitioning to the community and related HCBS Quality Measures in September 2026 (specifically MLTSS/FFS LTSS-6, -7, and -8).

The Community Transition Dashboard helps states stay ahead of Access Rule and HCBS Quality Measures requirements by previewing results and addressing data quality issues early.

Follow Mathematica's Medicaid Access and Managed Care Rules for HCBS blog for more details.

For more information about the Community Transition Dashboard and how it can help you proactively manage populations transitioning to community living, please contact us at HCBSPractice@mathematica-mpr.com .
